

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

REPORT

TO

The Right Honourable Sir GEORGE CORNEWALL LEWIS, Bart., M.P.,
Her Majesty's Principal Secretary of State for the Home
Department, &c. &c. &c.

*General Register Office, Somerset House,
30th May 1861.*

SIR,

I HAVE the honour to submit to you my Annual Report for the year 1859.

The registration of the year proceeded satisfactorily.

The names of 335,446 men and women were inscribed on the Marriage Registers; of 689,881 children on the registers of births; and of 440,781 persons of all ages on the registers of deaths.

The total number of names enrolled during the year amounted to nearly *a million and half* (1,466,108).

It was eight years after the population was enumerated, so that the ratios of the above numbers to the population can only be exactly determined when the census numbers of 1861 have been ascertained; the subjoined rates of births, deaths, and marriages must therefore be taken subject to correction, as they are estimated on data growing every successive year after the census more imperfect. The limits of possible error are, however, not extensive.

TABLE I.—Estimated POPULATION, with the Number of MARRIAGES, BIRTHS, and DEATHS registered in England in each Year from 1838 to 1859.

Years ended Dec. 31st	Estimated POPULATION in England in the Middle of the Years.†	MARRIAGES.	PERSONS Married.	BIRTHS (exclusive of Still-born).	DEATHS.	Excess of Births over Deaths.
1838	15,512,266	119067	226124	463737	342760	121077

1851	17,982,949	164206	306412	615865	363296	230429
1852	18,206,627	166763	317564	634012	407135	216877
1853	18,406,618	164520	326420	612291	421067	191204
1854	18,616,760	166787	319454	634406	437906	196400
1855	18,796,914	183112	304226	684043	432703	208940
1856	19,044,187	166337	316674	657453	393006	266947
1857	19,204,697	166067	318194	663071	419615	243356
1858	19,328,108	166070	312140	655481	448626	206835
1859	19,746,609	167723	325446	689621	440781	248700

† The Population has been deduced on the assumption that the annual rate of increase was uniform; viz. 1'226 per cent. in each of the 10 years 1841-51, and 1'226 per cent. in each of the 8 years 1838-40. For 1823-29 the increase of Population has been obtained by taking the excess of births over deaths in the four quarters ending June 25th, in each year.

MARRIAGES.

167,723 marriages were registered in the year; 136,210 according to the rites of the Established Church; and 31,513 not according to those rites. Of the marriages in the Church, 19 were by special licence, 20,345 by licence, 107,737 by banns, and 4204 upon Superintendent Registrars certificates. The clergy omitted in 3905 cases to state whether the marriage was by licence or by banns.

The marriages by banns increased more rapidly than the marriages by licence; and were in proportion to those by licence as 5:296 to 1.

Of the marriages not according to the rites of the Established Church 12,519 were by Protestant Dissenters, 7756 by Roman Catholics, 70 by Quakers, and 324 by Jews; 10,844 marriages, exceeding those of the Roman Catholics, were performed in Superintendent Registrars offices. 137,005 bachelors married as many spinsters in the year; and 8161 widowers married the same number of widows; 7058 bachelors also

Buildings registered.—4228 places of public worship were open for the solemnization of marriages, and registered on December 31st, 1859. This number exceeds by 156 the number on the register at the same date of the previous year.

Seasons.—The marriages are most numerous after harvest in the Christmas quarter of the year, and in the spring quarter, including the months of April, May, and June. The marriage rate is lowest in the Lent quarter ending in March, when the produce of the year is partly consumed.

BIRTHS.

The registered births, which declined in the previous year, rose to 689,881 in the present year. The increase is 34,400. The birth-rate of the year is 3·494, or 1 in 29.

Sex.—352,662 boys and 337,219 girls were born; and 15,443 more boys than girls, the proportions being 1046 boys to 1000 girls; so that the proportions were nearly 22 boys to 21 girls.

Seasons.—The proportion of births in the several seasons of the year varied. Thus if we take the average births of each quarter at 1000, the proportional births in the four quarters of the year are represented by the numbers 1032, 1022, 968, and 978. These proportions differ from year to year; but the births in the first exceed those in the second six months of the year.

Children born out of wedlock.—44,751 children were born out of wedlock, or 6·5 per cent. of the children born alive, and so registered as to allow the distinction to be drawn. *One* in every *fifteen* children is in this condition, and has to encounter the hardships incidental to it; for hitherto mankind have treated the innocent children with the opprobrium which properly attaches only to the parents.

To 100 girls, 105·7 boys were born out of wedlock; whereas to 100 girls, 104·5 boys were born in wedlock.

TABLE IV.—MARRIAGES. The Proportion per Cent. of *Minors* of each Sex, of *Males* and *Females* who *signed the Register with Marks*, and of *Persons* who were *Widowers* or *Widows*.

YEARS ended 31st December	To 100 Married.

rections have been made for measure and for quality in the Eton returns, the average prices of wheat were 40s. 7d. and 40s. 6d. a quarter in the seventeenth and eighteenth centuries. The price of potatoes also fell considerably; in the first 13 corresponding weeks of 1857-8-9 York Regents sold at 110s., 152s. 6d., and 90s. a ton at the waterside market, Southwark. At Leadenhall and Newgate Markets the price of beef of the lowest and of the highest quality is more by $\frac{1}{2}$ d. a pound than it was in

Note.—In deducing the results given in this Table a correction has been made for increase of population, based on the numbers enumerated in 1841 and 1851, on the assumption that the increase was uniform in each year to 1851. Since the Census of 1851, as no satisfactory data exist for ascertaining the progress of the population, which has been much interfered with by emigration and other causes, the increase has been taken to be approximately represented by the excess of births over deaths registered in each year. The proportions must be taken as provisional; until the next census the absolute numbers cannot be determined.

the winter of last year; mutton is at the same price. The mean prices per lb. in the three winters 1857–8–9 were: beef, $5\frac{3}{4}d.$, $5\frac{1}{4}d.$, and $5\frac{3}{4}d.$; mutton, $6\frac{3}{4}d.$, $5\frac{3}{4}d.$, and $5\frac{3}{4}d.$

The mean temperature of the quarter that ended on March 31st, at Greenwich, was $43^{\circ}.3$, or $5^{\circ}.5$ and $4^{\circ}.1$ higher than the temperature of the two corresponding quarters of 1857–8; and $4^{\circ}.9$ above the mean temperature of 88 years. There are only two instances (1822 and 1846) since 1771, when the winter temperature was higher. The excess of temperature was observed in each of the three months. The air contained more than the average amount of water, but the humidity was less than usual, being 83 (saturation being=100). The *fall of rain* was 3.1 in. at Greenwich; so it was 1.6 in. below the average. The rain-fall was deficient in all the southern counties, excepting Cornwall and Devon.

The deficiency was less in the northern stations. At Stonyhurst the Rev. A. Weld says: "The weather has been so wet that scarcely anything can be done on the ground; no one remembers so wet a season." At Bristol 3·29 inches of rain fell in three days (March 11th, 12th, and 13th). The Rev. J. Slatter, of Rose Hill, near Oxford, says: "The great absence of rain has produced much low fever." The people are often driven in droughts to the use of impure water, which is a common cause of disease in men and animals. Altogether the meteorology of the season has been exceptional.

TABLE XII.—ENGLAND. PROPORTION OF BIRTHS to 100 Women living at the Age 15–45, in each of the Years 1841–59.

Middle of the Years	Women living at the Age 15–45 (estimated).	Births registered.	Births to 100 Women living at the Age 15–45.	Women bearing Children to 100 Women living.*

* The number of children born alive is to the number of women bearing children (including those who bear still-born children) nearly as 100 to 102. See the data of this estimate in the 17th Annual Report, Appendix, p. 72. The figures in col. 5. are deduced by multiplying the figures in col. 4. by 1·02.

TABLE XIII.—ENGLAND. DEATHS.—ANNUAL RATE OF MORTALITY of Males and of Females, 1838–59.

YEARS.	DEATHS		Deaths of Males to 100 Deaths of Females.	Of equal Numbers living, the Number of Male Deaths to every 100 Deaths of Females.

1858	2·265	2·243	102	106
1859	2·200	2·167	103	106
Average of 22 years, 1838–59	2·314	2·128	108	107

The Table may be read thus:—In the year 1838 to every 100 males living there were 2·235 deaths of males; to every 100 females living there were 2·183 deaths of females; and to every 100 females who died there were 106 deaths of males. The last column shows the relative mortality of males and females; and that out of equal numbers living the deaths of males were 100 to every 100 deaths of females in 1838.

The returns with which the Registrar General has been favoured by the Poor Law Board, exhibit the improvement in the circumstances of the people which the marriages indicated. The average number of paupers

Note.—In deducing the results given in this Table a correction has been made for increase of population, based on the numbers enumerated in 1841 and 1851, on the assumption that the increase was uniform in each year (1841–1851). Since the Census of 1851, as no satisfactory data exist for ascertaining the progress of the population, which has been much interfered with by emigration and other causes, the increase has been taken to be approximately represented by the excess of births over deaths registered in each respective year ending June 30th.

in the receipt of relief (865,818) was less by 108,199 than the numbers (974,017) receiving relief in the first thirteen weeks of 1858, and 46,729 less than the numbers in the corresponding quarter of 1857. A part of the improvement is fairly referable to the mildness of the weather; but a part is undoubtedly due to the improvement in the circumstances of the people which was perceptible in the latter part of last year.

State of the Public Health.—121,580 deaths were registered in the quarter. The mortality was at the rate of 2·510 per cent., or rather more than 25 in 1000. The number of deaths was less than the number of deaths in the winter of last year by 4239; and the rate of annual mortality was less by 1 in 1000. In both the winter quarters the rate of mortality exceeded the average rate prevailing during the winters of the last ten years. In the first quarter of the year 1858, the weather was unusually severe; in the first quarter of 1859 the weather was unusually mild. In both quarters the rate of mortality exceeded the average. The rate of mortality in 125 districts and 23 sub-districts comprising the chief towns, is 26·5 in 1000, the same as the average of ten previous winters. The mortality in the remaining districts and sub districts, comprising

The Table may be read thus:—Of 100 Males living of the age of 35 and under 45, 1·316 died in 1853, 1·349 in 1854, and so on for other years, a correction for increase of Population having been made for each Age in each Year; and the deaths of persons whose ages were not returned have been distributed proportionally over each age. The data upon which this Table is constructed appear in this or have appeared in the previous Reports, and in the Census Report. See Census Report 1851; and the Annual Reports of the Registrar General, particularly the 5th and 9th.

† Cholera epidemics.

chiefly small towns and country parishes, had increased from 22·2 to 23·8; or the increase is 1·6 in 1000.

It will be recollected that the sanitary measures in Ely reduced the mortality of the town below that prevailing in the surrounding parishes. And such will probably be the course matters will take unless sanitary measures are extended to the country as well as to the towns. The superior health of the country arises mainly from the circumstance that,

Mean	3·439	3·441	3·172	3·144	2·488	2·224	2·063	2·177

The Table may be read thus, without reference to the decimal points:—In the March quarter of the year 1838, to 100,000 of the population of England there were 3,032 births, and 2,615 deaths registered. The three months January, February, March, contain 90, in Leap year 91 days; the three months April, May, June, 91 days; each of the two last quarters of the year 92 days. For this inequality a correction has been made in the calculation.

the population being widely disseminated, the poisonous exhalations which are produced around the dwellings are destroyed to a considerable extent by the atmosphere. Now the houses in the suburbs of London and of the provincial towns are generally built by the architects with cesspools, which are not emptied daily, and which have not the advantages of drainage; so that the beneficial effects of the open country air in the daytime are likely to be neutralized by the impurity of the night exhalations in-doors.

The mortality of the quarter in England at the rates prevailing in 63 of the healthiest districts would be 17·64 in 1000; and if the mortality of the whole population had been at that rate, the number of deaths would have amounted to 86,624, instead of 121,682. Consequently 34,956 unnatural deaths were registered in the 90 days. This implies not only loss of national life, but loss of health and English vigour, which it is desirable on every account to raise to the highest pitch in the present days.

The mortality has prevailed with different degrees of severity in every division; but the number of deaths was much greater in every division except London, than the deaths in the winter quarter of 1857; and less than the number of deaths during the winter quarter of 1858 in every division except the North, West Midland, and Northern Divisions. The reason of this will be apparent upon examining the returns in detail.

Diphtheria has prevailed, with varying degrees of severity, in different parts of the country. The ravages of this disease deserve particular attention.

In the SOUTH EASTERN DIVISION the deaths from all causes amounted to 9,758. In Guildford* the mortality was unusually high; whooping-cough and bronchitis have been prevalent, and some cases of fever have been fatal. The cause of the high mortality in Dorking is not explained. The deaths in Farnham have apparently been raised by the Aldershot camp. Tonbridge, Maidstone, and Cranbrook have experienced high rates of mortality; out of 45 deaths 18 were caused by diphtheria, which was exceedingly fatal in Branchley and Horsemonden, two parishes in the Tonbridge district. In Cranbrook, Tenterden, Ashford, Deal, and Dover diphtheria proved fatal. The deaths in the sub-district of St. Peter, Brighton, are 63 above the average for the corresponding quarter of the last five years. Zymotic diseases have prevailed; and 53 persons have died of scarlatina and diphtheria, 10 of typhus, and 13 of small-pox, none of the latter having been vaccinated. In Worthing, where sanitary measures have been carried out, 83 deaths occurred; in Brighton, 459; the respective populations of the two districts having been 18,746 and 65,569 in 1851. Assuming that the population increased at nearly the same rates, the mortality out of equal populations was about as 4 in Worthing to 7 in Brighton. All the facts tend to show that sanitary improvement is a question of life and death to the population of every town. Several districts of Hampshire suffered severely; small-pox prevailed at Southampton, scarlatina at Kingsclere. Reading continues an unhealthy town; in Windsor the mortality has fallen.

In the SOUTH MIDLAND COUNTIES 7189 persons died; the deaths in every county, except Northampton, being below the deaths in the previous year. Newport Pagnell, Chipping Norton, Kettering, Wellingborough, and several other districts have experienced high rates of mortality. In the Northampton district, with a population of 33,857 in 1851, the deaths amounted to 306. The deaths in the two previous winter quarters 1857-58, amounted to 239 and 231; so the mortality is excessively high, and above the average. Measles and whooping-cough have prevailed. It

* The Superintendent Registrar's District is in all cases referred to, except where otherwise stated.

appears that there has been a strike in the town. In the Cambridge district 159 deaths were registered; in the Ely district 118; the population of the two districts in 1851 having been 27,815 and 22,896; so that the mortality of Cambridge is greatly in excess of the mortality of Ely. In the ten years 1841–50 the mortality of the population of Cambridge was at the rate of 23 in 1000; hence, taking the excess over 17, the rate prevailing in healthy districts, it exhibited 6 degrees of insalubrity, and during the ten years the unnatural deaths amounted to 1568. How long is this state of things to continue in the seat of one of the great universities of the country? Science has here a wide field of usefulness before it. It has the great opportunity of saving many lives, and at the same time of applying its principles. By the energy of one of the departed ornaments of the university, Ely has been rendered comparatively healthy. And from Ely Cambridge has now evidently much to learn. It is a matter of national importance, that the places where some of the principal youths of the country are educated should be healthy. Why are not the schools of medicine in the universities, schools of health? Why are not the undergraduates taught practically the conditions most favourable to human development? Why are there not tables of mortality at Cambridge and Oxford, as well as in London, pointing out monthly the effects of all the noxious agencies infesting the houses, colleges, and streets? This would be teaching by example, and could not fail to leave permanent impressions on the minds of many men who will have unusual means of directing public opinion.

In the EASTERN COUNTIES the registered deaths amounted to 6184, or were less by 1415 than the deaths in the first quarter of last year. Rochford in Essex experienced a high rate of mortality; 91 persons died. The registrar of Great Wakering, one of the sub-districts, explains this in his note:—

The deaths have greatly exceeded the average, in consequence of the prevalence and fatality of diphtheria amongst infants, especially in the Island of Foulness. Many ditches there are in a very filthy state, and the effluvium arising from some is intolerably offensive. Ague also has been more prevalent, more severe and obstinate, during the last two years, than I have ever known it in a period of 35 years.

Some general measure is required to deal with the drainage of all the marshes on the banks of the Thames.

Parts of Maldon, Dunmow, and Saffron Walden in Essex have suffered from diphtheria; so have parts of the districts of Cosford, Tunstead, Erpingham, Aylsham, Blofield, and Loddon in Suffolk and Norfolk.

10,799 persons died in the SOUTH-WESTERN COUNTIES, but the mortality was lower than it was last year. Diphtheria is still prevalent at Christian Malford in Wilts. Trowbridge has also suffered from that and other diseases. Plymouth and the surrounding districts have suffered severely. The registrar in explaining the excess in the number of deaths in East Stonehouse says that 16 Turks died in the quarter. Four persons in Parkham died of scarlatina in one house. The deaths in Launceston and in Redruth have exceeded the average from diphtheria, small-pox, measles, and diseases of the respiratory organs. Epidemic sore throat prevailed, and 3 cases of diphtheria were fatal in a sub-district of Taunton, Somersetshire. 27 deaths from small-pox occurred in Bridgewater. Scarlatina and diphtheria attacked nearly every person in Chew Magna, Clutton.

16,141 deaths were registered in the WEST MIDLAND DIVISION; 8,956 in the NORTH MIDLAND DIVISION. In these two divisions the deaths exceeded the deaths in the severe winter quarter of 1858. In many districts of Gloucestershire, including Stroud and Cheltenham, the mortality was high; diphtheria and scarlatina prevailed in this county, in Hereford, and in Shropshire. Three deaths from diphtheria occurred to children in one family in the Condover sub-district; the cesspools connected with the cottages are generally in a bad state. The sanitary

state of Staffordshire is very unsatisfactory, and the mortality has been excessively high. Diphtheria and scarlatina have prevailed in many of its districts; and in Stourbridge, and in Foleshill, where the mortality has also been very high.

Ashby-de-la-Zouch, Leicester, and several districts in Leicestershire, have suffered from epidemics; 150 cases of measles and scarlatina occurred in the village of Sutton Bonnington alone. Diphtheria was prevalent in Lincoln, where typhoid fever also prevailed; six persons died from it in one family. Their residence is a mile from the village, a solitary farmhouse, and no special cause of the attack has been ascertained; but the adequacy of the inquiry may be questioned. Diphtheria has prevailed in many districts of Lincolnshire, Nottinghamshire, and Derbyshire, which have all experienced high rates of mortality.

19,430 deaths were registered in the counties of CHESTER and LANCASTER; nearly as many as were registered in the last winter quarter. Diphtheria, scarlatina, measles, and typhoid fever, have prevailed in many districts.

The 12,299 deaths in YORKSHIRE imply a heavy rate of mortality. Scarlatina and diphtheria were prevalent. Sheffield continues to suffer severely from these and other epidemics.

Of the NORTHERN COUNTIES, in which 6,602 persons died, Durham appears to have suffered most severely from various kinds of zymotic diseases; scarlatina and diphtheria occupying conspicuous places in the registers.

Diphtheria has spread over the remotest parts of WALES. We find it in Haverfordwest, in Cardiff, and in Corwen. The deaths in the Principality from all causes amounted to 8,213.

It is a melancholy task to record the fatality of diseases arising through the neglect of sanitary arrangements in this and in other countries; and to observe so much activity in inventing opportunities of destruction, with so much apathy in applying measures already invented for promoting the well-being of the population. Man is the only animal, Pliny says bitterly, that takes a pleasure in the destruction of his own species*: surely somebody will one day arise to teach the world the truer pleasure of saving mankind!

Second Quarter.—April, May, June, 1859.

The returns are altogether of a satisfactory character; the mortality is below the average, the births are more numerous than usual, and the people, taking a cheerful view of their prospects in life, have married in large numbers.

Marriages.—84,084 persons married in the quarter that ended on June 30th; and the marriages in the quarter were at the rate of 1·712 per cent. per annum. The average of the quarter being 1·698.

Births.—175,864 births were registered in the three months that ended on June 30th; and the rate of birth was 3·579 per cent. per annum. This is somewhat above the average rate.

Increase of Population.—As the births amounted to 175,864, and the deaths to 105,631, the natural increase of the population of England and Wales was 70,233; or, on an average, 772 daily.

* Denique cetera animantia in suo genere probe degunt: congregari videmus, et stare contra dissimilia. Leonum feritas inter se non dimicat: serpentium morsus non petit serpentes; ne maris quidem belluæ ac pisces, nisi in diversa genera, sæviunt. At hercules homini plurima ex homine sunt mala.—C. PLINII. *Natur. Hist.*, Lib. 7. s. 1.

This is confirmed by Cuvier: "Aujourd'hui, que l'homme seul peut nuire à l'homme, il est aussi la seule espèce qui soit continuellement en guerre avec elle-même."—*Règne Animal.* Tom. 1 p. 71.

The natural increase of population was unusually great; and in the United Kingdom probably exceeded 1158 daily.

42,939 emigrants, or 472 daily, sailed from the ports of the United Kingdom at which there are Emigration Officers; and 10,332 of the number, or after correcting for those undistinguished, probably 11,387 were of English origin. 4,390 sailed to the Australian colonies, 385 to the North American colonies, 5707 to the United States, and 905 to other places.

Prices, the Weather, and Pauperism.—The price of food, the state of employment, and the weather, influence the population to a great extent.

The average price of wheat has risen from 40s. 8d. a quarter to 47s. 3d., which is 7 per cent. above the price of the corresponding spring quarter of the previous year. The prices of beef and of mutton by the carcase have gone up to 58d. and 6d. a pound at the Leadenhall and Newgate Markets; they are 10 and 9 per cent. higher than the spring prices of the previous year. Potatoes were 97s. 6d. a ton at the Southwark market, or nearly a halfpenny a pound; and 40 per cent. cheaper than they were in the same months of last year.

The weather in the months of April and May was rather warmer than usual; during June the temperature was almost always high, the average daily excess having been 3° nearly. For six weeks (from April 11th to May 23d) the wind, as is usual at this period of the year, was mostly from the N.E., travelling at the rate of nearly 100 miles daily; during the quarter the average daily horizontal movement of the air was 88 miles. The humidity of the air was of nearly the average amount in April and May; it was somewhat more humid in June. The rain-fall of the quarter was slightly above the average. It would seem, however, that the annual fall is diminishing, and it is stated that the deficiency in the last five years is equal to the average fall of one year, viz. 25 inches.

The average number of poor claiming relief, fell from 871,512 in the Spring quarter of last year, to 819,560 in the Spring quarter of the present year; or pauperism declined 6 per cent.

State of the Public Health.—About 105,631 persons died in the three months which ended on June 30th, for that number appears on the registers of the quarter; and the rate of mortality was 2·150 per cent. or less by ·064 than the average rate of the season. In the chief towns the mortality was at the rate of 2·24 per cent. less by ·15 than the average of 2·39 per cent. In the districts of the country and of the small towns the mortality was lower (2·06) than it was in the denser districts; but instead of improvement there is deterioration. Indeed the sanitary condition of the country districts around the large towns now demands strict attention.

The mortality of all England if the same as in the 63 healthy districts would be at the rate of 17 in 1000, or exactly 84,207. These may for the present be held to be natural deaths; the excess of 21,424 over this number are undoubtedly unnatural deaths, and may be ascribed to the unfavourable sanitary conditions in which a large portion of the population still lives.

The 105,631 deaths in the quarter, although less than the usual number, imply, according to the most reliable returns of sickness, that about a million and a quarter of people of all ages were on an average infirm or constantly sick during the season. The quarter of a million sick would be healed by effective sanitary arrangements. Thus, much labour that is now lost would be productive, and lives of great value would be saved. The whole community would acquire fresh strength and vigour. Money which is expended on real sanitary measures, such as have been carried out in Ely and a few other places, is the most

profitable of all national investments ; for it is an augmentation of the power and of the productive life of the population.

As at this season of the year many families leave the towns and go abroad to recruit their health, it may be here remarked that, generally, the United Kingdom is the healthiest country in Europe, and that France, Norway, Sweden, and Switzerland stand next in rank. Of the European watering places few are known to be so salubrious as those of England. They differ in health in different years through the recurrence of epidemics, from which, owing to existing sanitary defects, they are still imperfectly defended.

The mortality of some of the districts which are resorted to, it will be seen, was higher in the last three months than 20 in 1000 ; and of these are Bangor (24), Aberystwith (24), Whitby (26). The aggregate mortality of the three districts Ashborne, Bakewell, and Chapel-en-le-Frith, including Buxton, Matlock, and the country round, was at the rate of 23 in 1000. Of 10 districts which are resorted to for health, the mortality was at the annual rates ranging from 13 to 17 in 1000.

The epidemics of the season chiefly to be dreaded are diphtheria, which breaks out occasionally in unexpected places ; and diarrhoea of a severe form, most to be apprehended in localities with water impure and defective drainage. Of the past prevalence of these epidemics, and of others, information will be found usually in the Registrars' notes ; their progress through the summer can only be learnt by personal inquiries on the spot.

MORTALITY in the Districts containing some of the principal English Watering Places.

Kent and Surrey in the SOUTH EASTERN DIVISION were generally healthy, and the rates of mortality were low. Lewes and Brighton in Sussex still experience high rates of mortality. Southampton and all the surrounding districts have been unhealthy ; small-pox, measles, whooping-cough, and scarlatina, have prevailed to an extent which must attract the attention of the local authorities. The Wantage district of Berkshire experienced a heavy rate of mortality.

The SOUTH MIDLAND COUNTIES are generally below the average degree of salubrity ; but in several of the districts of Hertfordshire and of Bedfordshire the mortality was low. Northampton, where there has recently been a strike, continued to suffer heavily at the hands of death ; 317 persons died in three months out of a population of less than 34,000 in 1851 ; measles and small-pox prevailed. The Nene drainage has been carried out, and continued floods have not covered the valley. Wisbeach, once so unhealthy, lost only 137 persons by death out of a population exceeding that of Northampton (36,215). The successful result of the drainage of the districts of the Nene will, it may be hoped, lead the proprietors of the low, ill-drained parts of the basin of the Thames, and of our other rivers, to imitate the spirited conduct of the proprietors of that valley.

In Essex the mortality was high in the districts of Rochford and Tendring ; low in the districts of Epping and Ongar, not far from London. The registrar of Bradwell sub-district, Maldon, speaks of a sect calling themselves "New Lights," who abjure all medical skill ; they lose many of their children. Bury St. Edmund's in Suffolk offers a remarkable illustration of the evil effects of putting off sanitary measures until the eleventh hour. 107 persons died there in the quarter out of 13,900 people (in 1851). Measles prevailed to a considerable extent ; and typhus, or probably typhoid fever, put 12 persons to death, in "a locality of defective sanitary condition. The attention of the sanitary commissioners was immediately directed to the remedy of the evil.

Several districts of Norfolk, St. Faitha, Loddon, Depwade, Walsingham, Docking, Freebridge, Lynn, and King's Lynn, experienced low rates of mortality ; ague prevailed in King's Lynn.

Wilts is generally healthy ; Dorsetshire suffered from epidemics ; Barnstaple and the other districts of North Devon maintain their high character for salubrity ; small-pox prevailed in Plympton St. Mary, and raised the mortality in some of the other districts of South Devon. The mortality was above the average in the mining districts of Cornwall ; and in several districts of Somersetshire, which were visited by scarlatina and diphtheria.

Westbury-on-Severn and Winchcomb were healthy districts of Gloucestershire ; the districts of Church Stretton at the foot of the Caradoc, Atcham around Shrewsbury, and Whitchurch, were healthy ; so was Lichfield, standing like a land of Goshen in Staffordshire. But generally the mortality was high in the counties of Salop and Hereford ; and it was excessively high in nearly all the districts of Staffordshire. It is greatly to be regretted that the physical condition of the hard-working population of this county should be so deplorable, while it has abundant wealth and power and the means of improvement at its disposal.

Stourbridge in Worcestershire suffered severely from an epidemic of measles ; scarlatina and diphtheria prevailed in some districts ; Kidderminster and Evesham were the healthy districts of the county during the quarter.

The mortality was high in Birmingham and in several other districts of Warwickshire ; Meriden, Atherstone, Warwick, and Southam are healthy. The infant mortality continues excessive in the Holy Trinity sub-district of Coventry, which the registrar cannot ascribe to any other cause than parental neglect.

The NORTH MIDLAND COUNTIES were generally unhealthy, and diphtheria is still prevalent in many districts. Ashby-de-la-Zouch is the centre of an eruption of epidemics in Leicestershire ; Nottingham is another centre ; and nearly all the districts of Derbyshire have experienced high rates of mortality. In the Chesterfield district 411

persons died out of a population in 1851 of 45,795, so high was the mortality.

The Registrar of Arnold sub-district, near Nottingham, says: "The increase of mortality in this district is entirely from want of sanitary arrangements being carried out by the officers whose duty it is to attend to them. In Arnold alone, which comprises more than half the population, we are considerably worse in this respect than we were before our Local Board of Health was formed."

The deaths in Cheshire and Lancashire amounted to 16,773, or less by 1,123 than the deaths in the spring quarter of the past year. The mortality of Liverpool is decreasing, so is that of Manchester. In the race of sanitary improvement these two flourishing towns have, however, much to achieve ere they arrive at the goal which the small town of Ely has already attained. Why do they not carry out at once the substantial sanitary works which would render hundreds of thousands of people healthy? The fruit of the labours of their sanitary officers would then be abundantly apparent.

The mortality is above the average in nearly all the districts of these two populous counties.

The 11,588 deaths in Yorkshire slightly exceed the quarter's numbers of the preceding year. In Bradford 1180 persons died; Leeds and Hunslet 1251. The mortality of Sheffield and the surrounding districts increases. Hull and Patrington have become much healthier than they were. The mortality of some of the districts of the North and East Ridings is below the average; and that the West Riding should remain unhealthy every one must see with regret. The population succeeds in every manufacture except that of health.

Diphtheria, scarlatina, small-pox, and other causes have raised the mortality above the average in Durham and Cumberland; the northern districts of Northumberland are still among the healthiest in England.

Many districts of WALES and MONMOUTHSHIRE are infested by epidemics; measles, diphtheria, and scarlatina are mentioned by the registrars.

The following districts were exceedingly healthy: Chepstow, Narberth in Pembrokeshire, Cardigan, Builth, Rhayader in Radnorshire, and Anglesey. Islands are always the healthiest parts of the world; and in the last quarter Anglesey was apparently healthier than the Isle of Wight.

Third Quarter.—July, August, September, 1859.

The returns present a favourable view of the state of the country. The marriage rate, which had been low in the two previous years, approached the average. Thousands of children in excess of the average were born; the rate of mortality diminished; and the population increased at an unusual rate.

As the diminution in the rate of mortality took place in the towns it may be fairly ascribed to the prosperous state of trade, to the supply of better water, the abolition of cesspools, the purification of the air, and the various sanitary works which many of them have carried out.

Marriages.—79,606 persons married in the quarter that ended on September 30th, or 2,408 in excess of the numbers who married in the corresponding quarter of last year. The marriage rate was 1.598; the average of the quarter being 1.623.

Births.—The births of 168,394 children were registered in the quarter that ended on September 30th. The number is 10,949 in excess of the births in the corresponding quarter of last year. The birth rate in the quarter was 3.379.

Increase of Population.—64,178 was the excess of the number of births over the number of deaths, and that was therefore the natural increase of the population of England and Wales in 92 days. On an average 698 were added to the population daily, and the probable daily increase of the population of the United Kingdom was 1047, which at the ordinary rates of mortality will supply about 347 men daily of the age of 20. The youth of the country are growing at such a rate as to add a battalion to its strength every two or three days. A certain number of them are transplanted, and go to people the colonies.

34,864 emigrants sailed during the quarter, or 379 men, women, and children on an average daily, from the ports of the United Kingdom at which there are government agents, of whom about 12,464 were of English origin.

Prices, the Weather, and Pauperism.—The price of wheat has remained steadily at nearly the same figure for a year and nine months; and during the last three months it has been 44s. a quarter. This steadiness of price in an article of large consumption has a salutary effect.

Beef has been 5½d. a pound, mutton 5¾d. a pound by the carcase at Leadenhall and Newgate markets. The price of beef is the same as it was in the corresponding quarter of 1858, and the eighth of a penny less than it was in 1857; the price of mutton in the same quarters was 5¾d., 5½d., and 5¾d. The average prices of the higher qualities of the two meats decreased ¼d. in the pound; or beef from 6¼d. to 6½d.; mutton 7d. to 6½d. Potatoes were sold at the rate of 85s. a ton at the waterside market, Southwark; in the corresponding quarters of two previous years the prices were 105s. and 77s. 6d. The prices of the present year, like the temperatures of the seasons, occupy an intermediate position between those of 1857, when they were higher, and 1858, when they were lower.

The mean temperature of the quarter was 62°·8, or 3°·3 above the average temperature of the season during 88 years. The excessive heat was accumulated chiefly in July, when the mean temperature was 68°·1; while on July 12th the air in the shade reached 92½°, and 93° on the 13th and the 18th; so that during 10 successive days the mean temperature of day and night exceeded 70°, a thing unprecedented during the period over which correct observations extended. The air was drier (·72) than usual; but the rain-fall (8·2 inches) somewhat exceeded the quarterly average. The thermometer on the grass never fell below 40° in July and August, whereas it usually falls several times to the freezing point of water. Pauperism is below the average in the kingdom. The average number of paupers in receipt of relief during the quarter was 783,449, or less by about 29,000 than the numbers receiving relief in the corresponding quarters of the two previous years.

State of the Public Health.—104,216 persons died in the quarter. This number is 6074 in excess of the deaths, 98,142, in the corresponding summer quarter of last year; and the rate of mortality, 2·091 per cent., is below the average; the excess in that average being due to the epidemics of cholera.

A certain number of the deaths in the quarter may be set down as natural deaths, and they would not have exceeded 73,533 if the mortality in sixty-three districts of England, by no means in unexceptionable sanitary condition, be taken as the standard. The 30,683 deaths in excess of that number are unnatural deaths, the results of causes which it is the duty of every member of the community to endeavour to remove.

It is a remarkable fact that the mortality of the quarter in the small towns and the country parishes was above their average, to the extent of more than one death annually out of every 1000 living. A still greater excess might have been expected in the large town districts, whereas the reverse was observed; the mortality having been at the rate of 2 in 1000.

less than the average. The summer mortality in the town districts was formerly to that of the rest of the country as 26 to 18; in the last quarter it was as 23 to 19; and the difference will undoubtedly be still less considerable when all the dense districts are supplied with pure water, and with the means of returning all their refuse to the fields as manure in an innoxious state.

The deaths in London during the quarter exceed the average. The high temperature facilitated the decomposition of the impure refuse under the houses, in the streets, and in the river. Diarrhœa was unusually fatal all over the London area; scarlatina and diphtheria were epidemic. In the surrounding divisions the mortality was also above the average, as there the same diseases prevailed, with variable degrees of severity. In Kent diphtheria was the cause of several deaths in Brenchley near Tonbridge, Aldington, Wingham, and Deal. In New Romney, of the Romney Marsh district, remittent fever was prevalent and fatal; to 9 births there were 31 deaths. The deaths in Brighton amounted to 423; in the Worthing district to 84. The Broadwater Registrar says:—"The deaths are 20 per cent. below the average, very few having occurred in the town of Worthing, namely, only 17 out of a population, including visitors, of 8000. The deaths in the previous quarter were only 20. I attribute this result principally to the complete sanitary measures carried out in the town, under the supervision of the Board of Health." When will all the English watering places carry out "complete sanitary measures," and thus assert their superiority over foreign places of resort?

The districts of Portsea Island and of Alverstoke are not naturally healthy; the sites are low, and the water is probably impure; but measures might be adopted for diminishing the great numbers of deaths from such diseases as diarrhœa. The sanitary state of the rising town of Southampton is not satisfactory; 241 persons died in the district. Northampton and its neighbourhood are still suffering from epidemics. The few districts around Wisbeach have not experienced high rates of mortality; but fever and diarrhœa have been very prevalent in some parishes. The excess of mortality in the First Ward, Colchester, is ascribed by the registrar "mainly to fever of a typhoid type, chiefly among patients in the Camp Hospital, to diarrhœa, and to phthisis." The mortality in the Norwich district is lower than it was; but diarrhœa was common and fatal. In the East Wymer sub-district "the large number of deaths (18) from atrophy seems, on inquiry, to depend on improper food, from the mothers not suckling their children, as they say it would interfere too much with their work."

In the SOUTH WESTERN DIVISION, Wilts, Dorset, and Devon suffered an unusually high rate of mortality; scarlatina, diphtheria, and small-pox have proved fatal in many cases. "Sanitary arrangements are far from good in many houses" not only of Abbotsbury, where 3 deaths occurred in one house over drains in the worst possible condition, but it is to be feared in many other parts of these great counties.

In the WEST MIDLAND COUNTIES the deaths amounted to 12,627. The health of several of the Stafford districts is still bad. Measles, scarlatina, diarrhœa, and typhus have been fatal; in several houses of Bilston two and three children have been carried off by measles. "I fear," says the Registrar, "that often little notice is taken of illness until secondary symptoms appear, when medical aid is too late. Persons first apply to a druggist, and afterwards to a medical man, but not till the day before death."

The NORTH MIDLAND COUNTIES have suffered in various parts from diphtheria; the low marshy districts have been severely visited; but the deaths (6466) do not imply in the county aggregates higher rates of mortality than usual.

In LANCASHIRE and CHESHIRE the deaths (15,506) are in numbers below those registered in the summer quarters of the two preceding years. The mortality is below that of the preceding years in Liverpool, and will be still lower when all the required sanitary works are carried out. The expenditure up to the present time has borne ample fruits.

In YORKSHIRE 10,986 deaths were registered. The rate of mortality is lower than it was. Yorkshire, lying between the Humber and the Tees,—lofty moorlands, and the German Ocean,—is now occupied by nearly two millions of people, living much in aggregated masses, but with families characteristically distributed in four hundred thousand separate dwellings. The varieties of the geological strata—the coal and iron of the earth—the plains and hills feeding flocks of sheep, and horses—the rapid hill streams, and the smooth waters easily made navigable far into the interior from the Humber—the position between Lancashire and Germany—between Ireland and the North of Europe—enabled a hardy intelligent race of men, not only to obtain all the ordinary products of the English soil, but to found the chief manufactories of woollen goods in the world. The men of the West Riding became the clothiers of mankind. And so intent were they on their work, that the health of the workpeople was sacrificed, and the race in a few generations must have degenerated. But a reaction set in; Lord Shaftesbury's Bill, limiting the hours of children's labour, was first agitated at Bradford, and promoted actively by some of the heads of the leading firms. The first temperance society, it is said, was formed in this centre. As substitutes for insalubrious processes, exquisite pieces of mechanism not only card but comb the wool, spin it, weave it, dye it, and finally convert the fleeces of England, with the fleeces of Germany, and the finer wools of Australia, either alone, or combined with cotton, silk, and alpaca, into the finest textures; which vie in beauty and utility with the furs of animals, or the gayer plumage of birds. The workpeople are now in average town health; and through the incessant noises of machinery are often heard as the day declines pleasant voices singing the concerted songs of the Bradford minstrels.

The mortality of Yorkshire, during the ten years 1841–50, was at the rate of 23 in 1000; so 6 in 1000 died in excess of the deaths out of the same numbers living in comparatively healthy districts; and the unnatural deaths in the ten years amounted to 101,195. The loss of life in Yorkshire was unequally distributed; in the North Riding the mortality was at the rate of 19, in the East Riding (with York) 24, and in the West Riding 23 in 1000. The climate of Yorkshire is not naturally unhealthy; in the Guisbrough District the mortality was at the low rate of 16 in 1000, in Easingwold it was 17, in eight districts it was 18; upon the other hand the mortality in the Hull District was at the rate of 31 in 1000, Sculcoates 25, Leeds district 30, Hunslet (including parts of the borough of Leeds) 25; Bradford 25 in 1000.

As Yorkshire chimneys do not yet consume their own smoke, it covers whole districts, and is necessarily consumed by the people; its producers say, with medicinal effect, which may, however, well be questioned. If we suppose, for a moment, all the causes of mortality suddenly to become visible like smoke over Yorkshire, then the disease particles will be seen to hang densely over Hull, Sheffield, Leeds, York, and their environs, less densely over the Southern Districts, and the East Districts of the coast, clearing as you ascend the rivers to their sources in the moors, and almost disappearing over Easingwold, and the Guisbrough District by the side of the sea and the waters of the Tees.

Bradford has commenced various works which have already reduced the mortality. In the fourteen years 1841–54 the people of the Bradford district died at the rate of 26 in 1000 annually; while the mortality *during the three years 1855–57 has been nearly at the rate of 21 in 1000.*

Mr. Hindson, the town clerk, has shown at the meeting of the National Association, that a part of this satisfactory result is fairly referable to sanitary measures. The full water supply, and the rapid removal of the entire refuse of the town to the surrounding land, are still on hand; and when these salutary measures are achieved, and others that an intelligent medical health officer will suggest, Bradford will realize benefits which all the county will desire to share. The race of Yorkshire men, instead of degenerating, will then every year grow finer: more vigorous, more intelligent, better.

Fourth Quarter.—October, November, December, 1859.

The last Quarterly Return of 1859 presents satisfactory results. The country has recovered from the depression of 1858. The marriages exceeded the usual number. A great number of children in excess of the average were born; and, notwithstanding the severe weather, the mortality was nearly at the usual rate in the last quarter of the year.

Marriages.—100,592 persons married in the quarter that ended on December 31st, and the marriage-rate was 2·025. This is an increase on the numbers marrying in the corresponding quarter of the previous year, when the marriage-rate was 1·930.

Births.—The births of 170,091 children were registered in the quarter that ended on December 31st. The number is 12,129 in excess of the number registered in the corresponding quarter of the previous year. The birth-rate was 3·402; it is the highest on record.

689,881 children were registered in the year, or 1890 daily.

TABLE XVIII.—ENGLAND. ANNUAL RATE OF MORTALITY per Cent. in TOWNS and COUNTRY DISTRICTS in each Quarter of the Years 1849–1859.

Names of the 125 Districts and 23 Sub-districts comprising the chief towns.—All the Districts of London (32), and Kingston, Richmond, Gravesend, Medway, East and West Maidstone Sub-districts, Canterbury, Thanet, Hastings, Brighton, Portsmouth Island, Alverstoke (Goport), Southampton, Winchester Sub-district, Reading, Basingstoke, St. Clement Sub-district, Headington, Oxford, Northampton, Cambridge, West Ham, Colchester, Bury St. Edmunds, Ipswich, Yarmouth, Norwich, King's Lynn, Melbourn, Salisbury, Exeter, Plymouth, East Stonehouse, Stoke Damarel (Devonport) Redruth, Bath, Bodmin Sub-district, Bristol, Clifton, St. Nicholas Gloucester, and St. John the Baptist Gloucester Sub-districts, Cheltenham, Hereford City Sub-district, Shrewsbury, Wolverhampton, Stoke-upon-Trent, Wolverhampton, Walsall, West Bromwich, Dudley, Macclesfield, Worcester, Birmingham, Aston, Coventry, Leicester, Lincoln Home Sub-district, Radford, Nottingham, Derby, Stockport, East Macclesfield, West Macclesfield, and Sutton Sub-districts, Chester Castle and Chester Cathedral Sub-districts (Great Boughton), Liverpool, West Derby, Wigan, Warrington, Leigh, Bolton, Bury, Barton-upon-Irwell, Chorlton, Salford, Manchester, Ashton, Oldham, Rochdale, Haslingden, Burnley, Blackburn, Preston, Todmorden, Huddersfield, Halifax, Bradford, Huddersfield, Leeds, Dewsbury, Wakefield, Eccleall Bierlow, Sheffield, Rotherham, Micklethorpe, and Walmgate Sub-districts (York), Sculcoates, Hull, St. Oswald and St. Nicholas Sub-districts (Durham), Houghton-le-Spring, Sunderland, South Shields, Gateshead, Newcastle-upon-Tyne, Tynemouth, St. Cathbert and St. Mary Sub-districts (Carlisle), Merthyr Tydfil, and Llangafelach and Swansea Sub-districts (Swansea).

The three months January, February, March, contain 90, in leap year 91 days; the three months April, May, June, 91 days; each of the last two quarters of the year, 92 days. For this inequality a correction has been made in the calculations, also for the difference between 365 and 365·25000 days, and 365 and 365·24220 days in leap year.

Increase of Population.—The births exceeded the deaths by 60,737, and that was therefore nearly the natural increase of the population in 92 days. Thus the population of England and Wales increased at the rate of 660 daily; and the probable natural increase of the population of the United Kingdom was 990 daily.

In the year the excess of births over deaths was 249,100, or 682 daily in England and Wales; in the United Kingdom the natural increase must have exceeded 1000 daily.

TABLE XIX.—The AVERAGE PRICES of CONSOLS, of WHEAT, of MEAT, and of POTATOES; also the AVERAGE QUANTITY of WHEAT sold and imported Weekly, in each of the Years, and in each Quarter of the Years 852–859.

24,115 emigrants sailed from the ports of the United Kingdom at which there are Government emigration offices, and about 9854 of them were of English origin. During the year 125,432 emigrants sailed from our shores, of whom about 40,245 were English, 12,577 Scotch, 62,841 Irish, and 1264 were foreigners.

Prices, the Weather, and Pauperism. The prices of food, the weather, and the state of employment influence, to a certain extent, the births, deaths, and marriages of the population.

Wheat was sold at the average rate of 43s. 4d. a quarter during the last thirteen weeks of the year 1859; in the corresponding weeks of 1857 and 1858, the price was 52s. and 41s. 9d. The price of this great article of food fluctuated little, and has been moderate during the last two years. The average price of beef by the carcase at Leadenhall and Newgate markets was 74d. of mutton 73d. a pound. The price of meat fluctuates less than the price of bread; but taking the mean of the two articles, the price has followed the same course as the price of wheat.

TABLE XX.—MEAN ANNUAL VALUE OF METEOROLOGICAL ELEMENTS.

NAMES OF STATIONS.	Elevation in feet above the sea level.	Latitude.	Barometer.		Thermometer.							Mean Tempera
			Mean Reading reduced to the level of the sea.	Mean Monthly Range.	Mean of the highest Monthly Readings.	Mean of the lowest Monthly Readings.	Mean Monthly Range of Readings.	Mean of all the highest Daily Readings.	Mean of all the lowest Daily Readings.	Mean Daily Range.	Of the Air.

So the price of potatoes, which fluctuates largely, and has an evident effect on the public health, was 140s., 87s. 6d., and 102s. 6d. a ton in the last thirteen weeks of the three years 1857, 1858, and 1859.

The meteorology of the season was remarkable for its excesses of heat and cold. Very severe weather set in on October 21st; it was followed by a warm week (November 1st–8th); then the cold weather returned, and became intense, the temperature falling all over the country below the freezing point of water (32°), and in many places descending below 10°. At Norwich the low point of 1° was observed; at Holkham 3° 8°; at Lampeter 2° below zero. The weather after December 23d, became again unusually warm until the end of the year. The rain-fall was 8·7 in.; or 1·6 in. above the average of the season. Nearly 26 in. of rain fell in the year; or half an inch in excess of the average. In the four previous years the rain-fall was deficient.

Pauperism has gradually declined; the average number of paupers in receipt of relief during the last thirteen weeks of 1857–8–9, were respectively 859,756, 826,655, and 793,391.

for the Year 1859. By JAMES GLAISHER, Esq., F.R.S.

State of the Public Health.—109,354 deaths were registered in the last quarter of the year 1859, and the mortality was at the rate of 2·187 per cent. per annum. This is slightly above the average rate; but is much below the rates in the corresponding quarters of the two previous years (2·263 and 2·400).

In the last year 440,781 deaths were registered; and the mortality was at the rate of 2·232 per cent.; or rather more than 22½ died out of 1000 living.

By a careful induction, drawn from an extensive series of observations on various portions of the population, it appears that the deaths should not have exceeded 322,616 in the year, at what may be provisionally called the natural rate, actually prevailing in sixty-three districts of the country. The 118,165 deaths in excess of this number were, therefore, unnatural deaths.

If we divide the population into two nearly equal parts, the town population, it is found, died at the rate of nearly 25 in 1000; the country population at the rate of 19 in 1000 on an average during ten previous autumn quarters. In the last quarter the mortality of the towns was between *one* and *two* in 1000 below the average. This reduction may be fairly referred to the full employment of the people in the manufacturing districts, and to the partial sanitary improvements which have been made in several large towns. That it is not the effect of the weather, or of any universal cause, is proved by the fact that in the country and small

town districts the mortality rose from the average of 19 to 20 deaths out of 1000 living.

The diseases of the lungs were unusually fatal, in consequence of the severity of the weather; and the new form of throat disease (diphtheria) has caused much sickness, and in some places has destroyed many lives.

Fever has also been unusually prevalent in certain districts. Pathologists now distinguish three kinds of fever which have been hitherto confounded together; and are still apparently undistinguished by a certain number of medical practitioners. The typhoid fever, or *typhia* as it may be called to distinguish it from typhus, Dr. Southwood Smith, Dr. Murchison, and others have shown is a kind of night-soil fever. It was the cause of many deaths in families during the quarter. Thus in the sub-district of Lyncombe, near Bath, the Registrar reports five cases of typhoid fever at Oldfield Cottage; three had terminated fatally, and another death was hourly expected. The deceased young ladies, aged 19, 18, and 15, were the daughters of a lieutenant-colonel, who expressed his conviction that imperfect drainage was the cause of his most distressing loss. This fever has prevailed at Bedford; rich and poor have been affected. Twenty-six deaths from it have happened in the town during the last three months. People are suddenly attacked with considerable irritability of the bowels; tenderness of the right iliac region, gurgling of the bowels, the eruption of rose-coloured spots, delirium, and sometimes perforation of the intestines follow. Relapses are frequent.

Foul cesspools are numerous in the town, and the drainage is very defective. The soil is mostly gravelly, porous, and affected by soakage. Water contamination is frequent. A wheelwright's wife, aged 37, died of the fever on October 31st; a labourer's wife, aged 25, on November 16th; a dairyman's son, aged 23, on December 7th; a physician's daughter, aged 20, on December 15th; a captain's daughter, aged 18, on December 18th; a dealer's son, aged 26, on December 21st; and the curate, aged 24, died of the same low fever, with hæmorrhage, on December 28th. These tragical losses would undoubtedly be less frequent, nay would not be sustained, if the earth, air, and water of the town were effectively purified. More than fifty cases of the fever occurred in the small village of Hartfield (East Grinstead, Sussex), where the drainage has been much neglected and the sanitary arrangements of the houses generally are bad. The fever has been very prevalent at Newport, and its neighbourhood, in the Isle of Wight; it destroyed 13 lives. At Lemsford, in the Hatfield district, on the banks of the Lea, several persons were attacked, and two died. When this disease enters a house it generally attacks several members of the same family. The Registrars cite instances. The introduction of the disease can sometimes be traced; thus, a woman went to Yarmouth to nurse her daughter, who died, and was brought to Billingsford to be buried. Afterwards the mother, a daughter aged 24 years, and a son aged 14 years, died of the same fever. Two more members of the family were attacked, but are now better. The house stands apart, and the disease has not extended to any other family. Portland is crowded by men employed in the Government works; and yet patients suffering from small-pox, measles, or typhoid fever are, the Registrar complains, distributed in private lodgings, among the inhabitants; he has registered one death by fever. Other illustrations of the fatal prevalence of typhoid fever will be found in the registrars' Notes.

Cholera and diarrhoea have proved fatal in the Pontefract sub-district. In Glass Houghton, a township of about 200 inhabitants, 12 deaths were registered in 17 days (Oct. 1st-17th); they all died of cholera and diarrhoea. The dwellings in which the disease raged were badly ventilated, and in a low damp locality. Of the same diseases 15 persons died in Castleford and Whitwood. The people had been allowed to deposit dung and other offal near a well which supplied the streets to which the disease was mainly confined; and the heavy rains had washed the dirt into the water.

The returns afford evidence of the efficacy of sanitary measures. Thus the fever which had prevailed some time in the camp at Colchester, continued during October and November. An inquiry was instituted; sanitary measures were probably adopted, and no death from fever occurred in camp or town during December, which was unusually healthy. The great diminution in the mortality of Bristol is ascribed in part to the comparative prosperity of the working classes, but still more distinctly to

* Whewell's Anemometer.

the improvements which have been made in the drainage, and in the sanitary arrangements of the city. The Registrar of Walsall accounts for the decrease of deaths by sanitary regulations.

The increase of births and the decrease of deaths in Wilton the Registrar states is, in his opinion, attributable to the introduction of a new and superior class of cottages, in lieu of the former ill-built and badly-ventilated dwellings of the agricultural laborers. The numerous new cottages, which are being built in several parishes of that sub-district, "by the direction of Mr. Sidney Herbert," will no doubt improve the health of the inhabitants.

The improvement of the health of the laboring population of the kingdom is one of the most pregnant measures of defence that can be conceived; and will not be overlooked by the great landed proprietors.

At the instance of the Lords of Her Majesty's Privy Council, the Registrars have returned the causes of many deaths in their several districts. The printed Notes contain many interesting facts; the whole of the MS. Notes have been placed in the hands of Mr. Simon, their Health Officer, as they suggest important inquiries.

HEALTH of LONDON in 1859.

The weekly Tables have shown the changes of the population of London during each of the fifty-two weeks; and now the births, deaths, and fatal diseases of the year have been ascertained, our gains and our losses can be numbered.

The natural increase of the population was 31,049. That was the excess of the registered births over the registered deaths. Besides the increase by natural growth, London receives other accessions; every county of the United Kingdom sends its quota to the metropolis, and the aggregate number of the immigrants, according to the best estimate, exceeded 23,000. The probable increase of the population was 54,000 in the year; or more than a *thousand weekly*.

There is a further movement of the population of the metropolis: the natives leave in large numbers, and are replaced by persons born in other parts; and again, many immigrants who come to London return to their homes or wander elsewhere. The greatest migrations take place at the ages 20 to 30; when young people, unsettled, still maintain a connexion with the homes of their childhood.

Of 1,394,963 inhabitants of London of the age of 20 and upwards at the last census, 749,853 were born beyond its bounds. It is a vast stage, upon which the best of the population of the United Kingdom play their part, and then retire to country life, to foreign lands, or to the life beyond the grave. With the latter class only we have now to do in reviewing

rapidly the diseases, the crimes, the negligences, and the accidents which have proved fatal.

The population of London in the middle of the year 1859 was probably 2,774,338; comprising about 1,269,602 males, and 1,474,736 females; for there are 175,134 more females than males. This is the result of the excess of female over male immigrants, and of the higher mortality to which men are exposed.

The number of children whose births were registered in the fifty-two weeks amounted to 92,909 of whom 47,330 were boys, 45,579 girls. Thus the boys born exceeded the girls by 1751. The births were at the rate of 1787 weekly, 255 daily. The births exceeded by 3897 the births in the previous year, and by 26,158 the births registered in 1845.

The destruction of life proceeds on the same scale of grandeur: 61,860 of the inhabitants of London died; so if the dead of this single year could be brought to life, they would people a large city.

The deaths were at the rate of 1190 weekly, 170 daily.

31,577 males and 30,283 females died. The deaths do not increase at the same rate as the births; yet their numbers have increased since 1845, when the deaths of 24,836 males, 24,682 females, were registered.

Upon comparing the deaths with the estimated population, it is found that to 100,000 living, 2230 died in the year; the average deaths of the last eighteen years being 2439. Thus the mortality is nearly at the rate of 22 in 1000, in lieu of 24 in 1000.

The number of births varied weekly; 1980 children, the greatest number, were registered in the fourth week of January; 1578, the least number, were registered in the last week of September. The first number is 200 above, the last number 202 below, the average. The deaths fluctuated differently; in a week of June, towards the middle of the year, they fell to 913, and in a week of October to 902, or 283 below the average; in the last week of December they rose to 1677, or 492 above the average. The reproductive force thus acts most steadily; the destructive forces having a greater range, and while they allow the mortality to subside to some extent below, raise it at intervals much above the average.

The mortality was raised above the average by the extremely cold weather of January and December; the mean temperature of the two first weeks was low (35° and 39°), and the deaths rose to 1338 and 1429; again, the temperature fell in the two last weeks but one of December to 28°, 33°, and the deaths rose to 1548 and 1677 in the two weeks following.

Heat in our temperate climate also affects the mortality, and whenever the mean daily temperature rises above 60° diarrhœa and other bowel affections prove fatal to great numbers in London. Thus in the second

week of July the mean temperature rose to 71°, with a daily range of 30°; the registered deaths rose to 1400 in that week, and to 1605 deaths in the week following, when the mean temperature remained the same within two degrees. The mortality rose from June, now the healthy month of London, to July, and then gradually subsided with the temperature until October, another healthy month of the year.

The effects of cold on the system appear to be direct and immediate; but the morbid processes to which they give rise, chiefly affecting the breathing apparatus, only terminate fatally after a certain number of days.

The effects of a high temperature are sometimes immediate, as is notably the case in sun-stroke, or heat apoplexy as it has been called; and as the loss of caloric by the system is greatly diminished, less of the combustible matter is consumed, so certain diseases are generated within; while others are produced by the changing organic matter in the air and water.

During the latter part of the year the chief masters and the men in the building trades of London were in a state of open war. The masters closed their establishments on August 6th, and afterwards only employed men who would sign a document. The men refused, to the number, it was said, of 20,000. The conference of the trades societies distributed certain sums among their members; and in the sixth week as many as 14,000 of them received allowances. These allowances were, however, inadequate; the means and credit of many failed; the small shopkeepers instead of 9*l.* or 10*l.* took no more than 2*l.* or 3*l.* a week from the families of the workmen. The distress became in some cases urgent, yet the struggle was protracted through the rest of the year. The wives evidently thought their husbands in the right and suffered with them the pangs of hunger. A relieving officer thus writes September 1st: "I visited this man's lodging. He was out, but his wife was in bed, with scarcely a rag to cover her, evidently gradually sinking from want. The room contained scarcely an article of furniture, and presented a most destitute, neglected, and dirty appearance. She said, 'We are starving, sir; we have neither fire nor food.' 'Why,' I replied, 'does not your husband go to work?' 'What,' she exclaimed with considerable energy, 'to become worse than a slave!'"*

This distress produced ultimately a sensible effect on the mortality of the men and their wives. As long as there was bread, the poor children, however, apparently had it; until weakened, cold, ill-clad, they at last

* Times, 3d September 1859.

died in unusual numbers as the severe weather came on towards the close of the year.

In recording the fatal results of this conflict we must regret its origin, and express a hope that for the future a better understanding and a more friendly relation will subsist between masters and men.

The mortality in 100,000 living was at the rate of 2,230 deaths from all causes; of which 607 were by diseases of the zymotic class.

It may be instructive to compare the fatality by some of the diseases of London now and in the seventeenth century. In the twenty years 1660-79 the mortality in Southwark and in the city within and without the walls was at the rate of 7 or 8 per cent.; so the mortality within the Bills may be set down at the rate of 7000 annually in every 100,000 living, of which 3400 were by zymotic diseases.

The diseases were not always distinguished accurately. But by putting them in groups, any fallacy from this source will be obviated, and the decrease of some of the worst forms of mortal disease will be placed beyond doubt. To render the comparison easy, the number living is taken to be the same in the two periods, 100,000 in 1660-79 and in 1859. The annual deaths by small-pox were 357 in the first period, 42 in the second period; by measles 40 and 47 in the two periods. Medical science was imperfect, and the science existing in that century was very imperfectly applied. Croup and scarlatina were not generally recognized, but were confounded with measles and fever. The mortality by fever, continued or remittent, and ague was at the rate of 749 and 59 in the two periods; or including scarlatina, quinsy, and croup, the mortality was 759 and 227. Thus a person was in four times as much danger of dying of these diseases at the Restoration as a person living in London now. Women are not yet entirely exempt from peril in child-bearing; the mortality by that disease is now 17, it was then 86. Again a few (8) in 100,000 die now of dysentery; then, out of the same number, 763 died annually of that disease. By diarrhoea, a milder form of disease, 11 died then, 120 die now; cholera was fatal in 1859 to 7, and in the 20 years (1660-79) to 130 annually. Syphilis was twice as fatal as it is, the numbers being 21 and 12. Scurvy and purpura bear testimony to the imperfect nutrition of the population; the annual deaths were then 142 and are now 2. Vegetables, fruit, and fresh meat, could with difficulty be procured in winter. Worms and all parasitic creatures that crawl over, bite, and prey on the body of man, were prevalent; 10 deaths were ascribed to worms.

Dropsy, a result and sign of scurvy and fever, was exceedingly fatal; 298 died of that disease then, and 26 now. Apoplexy, paralysis, epilepsy, affections of the brain, and suicide, are more fatal now, according to the returns, than they were, in the proportion of 57 then to 151 now.

Consumption and diseases of the breathing organs were uncommonly fatal; 1079 then and 611 now are the figures of the mortality. Diseases of the digestive organs were fatal then and now in the proportion of 146 and 95. Stone and diseases of the urinary organs are now as fatal as they were then; the deaths being 21 and 30. Children were rapidly cut down; of convulsions and teething 1175 died then, 136—too many—now.

Of the violent deaths, some are now more frequent, as the forces by which they are occasioned are greater; of fractures and wounds 19 died then, 25 now; of poison, more accessible, 2 now and then only one; of burns, as fires are probably more common, and dresses more inflammable, now 13, then 3; drowning and suffocation were then twice as fatal (23 and 20) as they are (10 and 10) in the present day.

5 in 100,000 of the people were executed then annually; now one in the whole population.

In addition, the inhabitants of London were then destroyed by the terrible plague; which, upon an average of the twenty years, carried off 1132 lives.

In 1665 nearly a third of the population perished by plague. It is difficult to conceive this frightful destruction of human life; the imagination, the wailing notes of writers, the details of Defoe in a work which would have immortalized any writer, fail to bring all the horrors before our minds.

The mortality was at the rate of *seven* per cent. on an average during the twenty years. If the mortality of London had been at the same rate in the last year, instead of 61,869 about 194,200 deaths would have been registered.

The plague was the more appalling as the mortality overwhelmed the people in particular years; thus the burials from 15,356 in 1663, rose to 97,306, "whereof 68,596 were by plague," in 1665; and this was equivalent to more than 600,000 deaths by plague in the present population of London. In the third week of September 8297 deaths were registered, which represents a rate of mortality equivalent to about 85,000 deaths in a week on the actual population of London.

In these recurring plagues vast numbers of people fled in panic terror from the fatal city; servants and workpeople were discharged in great numbers; commerce was paralyzed; few ships ventured up the river, and merchant vessels were occupied by their owners as asylums on the water. Sextons, gravediggers, bearers, bellmen, and drivers of death-carts were in demand. The dead were buried indiscriminately; some bodies lay in forsaken houses, others across the paths in the streets, no longer traversed by carts or coaches. At the end of the summer, grass was growing in Bishopsgate-street and Cornhill, where the people thronged no longer. The loud voices, shrieks, and sobs of the delirious, the desolate, and the dying were heard in the streets; at times too disturbed by reckless revellers, and by raving patients, who had escaped from their dwellings, converted into prisons. For according to the regulations "infected houses" were shut up; a red cross and "Lord have mercy upon us!" were inscribed on their portals; while watchmen jealously guarded the doors. These quarantine regulations were at first rigidly carried out, and were only gradually abandoned when they were found useless, pernicious, and impracticable.

It is of some use to ask whether these past occurrences possess merely a historical interest for the inhabitants of London. Are the diseases of those times ever likely to recur? The answer must be:—undoubtedly they will recur, if their causes come again into action; and not otherwise. If a comet—if the stars—if volcanic action—if some mystical telluric influence destroyed the population of London at the rate of 7 per cent. annually, and at times in paroxysms at the rate of 20 and 30 per cent. in a single year, such powers are evidently beyond the reach of the will, and of all human effort. The population must resign itself to its fate. Vesuvius may perhaps be extinguished artificially; but the cause of the volcanic action which pervades the world is inaccessible.*

All the evidence, however, goes to show that comets, stars, and volcanic action had as much to do with the mortality of the population of London in the seventeenth century as with the mortality of the British troops in the Crimea; and no more. The supply of food, and particularly of vegetable and fresh animal food, in certain seasons of the year, was defective, so that a large portion of the population became scorbutic. The houses were nearly as close and dirty as the houses now are in Constantinople and Cairo; the water supply was imperfect, as London Bridge works and Hugh Middleton's New River were for many years unappreciated. Water

* See the *History of Epidemics* by Hecker, and the ingenious book of Mr. Parkin.

has in itself little attraction for people unaccustomed to ablution. Parasitic insects and diseases of the skin betrayed its impurities. The dirt of the houses struck foreigners. The sewers were imperfect; and the soil gave off marsh malaria in some parts, and in others was saturated with the filth of successive generations.

The high rates of mortality which then prevailed still attend cholera and current epidemics in certain localities. The nature of disease and the climate are still the same as they were in London before the Revolution; and it is evident that if plague has disappeared, other zymotic diseases, but notably dysentery, scurvy, and fever, have declined. Cholera was on an average then as fatal as it has been recently, and probably much more fatal than it will be again if London be supplied with pure water.

The nation exults justly in the progress of its manufactures. But the progress of its manufactures is surpassed by the progress of the health of its capital.

The improvement in the health of London has proceeded step by step with the amendment of the dietary, the drainage of the soil on which the houses stand, the purification of the water which the people drink; with the sweetening of the air; and with the progress of medical science, which is the source of sound sanitary doctrines.

So long as these improvements are maintained, the diseases of the seventeenth century will not recur; and all further progress is in the hands of the people. They can work out their own salvation, with God's blessing. The causes of disease are numerous; but every one that has hitherto been discovered can be to a certain extent controlled. If by persevering in the exact observation and analysis of the diseases of the population, science succeeds in bringing to light the evils of unnatural diseases still existing, we may hope confidently that those evils will be averted; and that, rising from the Thames, the site of London, which was pronounced in the seventeenth century a field of blood and terror, will be a field of health, concourse, and security to the population of the Metropolis of the Empire.

GREAT BRITAIN.

The Returns of the Registrar General of Scotland supply us with the materials for determining the rates of marriage, birth, and death in Great Britain.

377,700 persons married, 796,613 children were born alive, and 502,535 persons died in Great Britain during the year; so the natural increase of population arising from the excess of births over deaths was 294,078. The births and deaths are not yet registered in Ireland; but taking these into account, it is probable that the natural increase of the population of the United Kingdom exceeded 1000 a day. The marriage rate of Great Britain in the year was 1·650 per cent. on the

TABLE XXVL.—ESTIMATED POPULATION, MARRIAGES, BIRTHS, and DEATHS in Great Britain, 1859.

	Area.		Estimated Population in the middle of the Year 1859.	Marriages.	Persons Married.	Births.	Deaths.
	Acres.	Hectars.					
England and Wales -	87,394,915	15,104,312	19,746,000	167,723	535,446	689,381	440,781
Scotland - - -	30,047,463	8,112,687	3,184,940	31,127	42,354	106,732	61,754
GREAT BRITAIN -	117,442,377	23,216,999	22,930,940	198,850	577,700	796,113	502,535

Note.—The population of England and Wales has been obtained by taking the excess of births over deaths in the 4 quarters ending June 26th in each year; the population of Scotland has been deduced on the assumption that it increased in 1859 at the same rate as it did in each of the 10 years 1841-51.

population ; or nearly $\cdot 098$ *higher* than in the previous year, when the rate was $1\cdot 552$.

The birth-rate was $3\cdot 482$, or $\cdot 125$ *higher* than it was in the previous year. The increase of the birth and of the marriage rates is noticeable both in England and Scotland.

The mortality was at the rate of $2\cdot 196$ per cent., or *less* by $\cdot 072$ than the mortality ($2\cdot 268$) of the previous year.

The increase of the marriage and birth rate, as well as the decrease in the rate of mortality, are all indications of improvement in the general condition of the population.

His Royal Highness the General Commanding in Chief has favoured me with a return of the strength of the British army *abroad*, and of the deaths in its ranks. The mean strength was $123,709$, and the deaths amounted to $4,150$. Taking the due proportions for the parts of the army belonging to Great Britain, the mortality of the population, including the army abroad, was $22\cdot 02$ in 1000.

The mortality of the population of France in the same year was at the rate of $26\cdot 70$ in 1000, which is considerably above the average of that Empire. M. Legoyt mentions among its principal causes the prevalence of dysentery, diphtheria, and of some other epidemical diseases. It will be observed in the Table, deduced from returns which M. Legoyt has been good enough to supply, that the marriage rate is rather lower in France

PROPORTION per Cent. of MARRIAGES, BIRTHS, and DEATHS to the Population of Great Britain, 1859.

—	Acreality.		To 100 Persons living.			
	Acres	Hectars	Marriages.	Persons Married.	Births.	Deaths.
	to a Person.					
England and Wales - -	1'89	'76	'849	1'698	3'494	2'223

than in Great Britain; the birth-rate is much lower, and the death-rate is higher; so that the natural increase of population is less in France than in Great Britain.

The births in France amounted to 1,011,787; and estimating the number of births in Ireland at 238,208, the births in the United Kingdom amounted to nearly the same number, or 1,034,821.

The deaths in France were 972,556; while the deaths in the United Kingdom did not probably exceed 661,171.

TABLE XXVIII.—DEATHS OF OFFICERS AND MEN in the ARMY ABROAD, and Estimated Numbers belonging to Great Britain and to England and Wales, in each of the Six Years 1854, 1855, 1856, 1857, 1858, and 1859.

YEARS.	Deaths of Officers and Men in the Army Abroad.	Estimated Numbers in Col. 2 belonging to	
		Great Britain.	England and Wales.
1	2	3	4
1854	7,368	4,287	8,496
1855	20,315	11,794	9,619
1856	2,680	1,496	1,223
1857	3,220	1,869	1,385
1858	7,268	4,275	3,486
1859	4,150	2,400	1,985

The number of Deaths in the cols. 3 and 4 were estimated on the assumption that the soldiers abroad belonged to the different parts of the British Empire in the proportions indicated in the next Table derived from the Census Report, Occupations, Vol. I., Supplementary Tables, p. cccxlv., vi. See Table XXIX.

TABLE XXIX.—ARMY SERVING AT HOME AND ABROAD.

				1851
Officers and Men born in England	-	-	-	67,647
" " Scotland	-	-	-	15,200
" " Ireland	-	-	-	53,109
" " Foreign Parts	-	-	-	6,754
Total	-	-	-	142,870

It was inferred also that the 76,443 officers and men abroad in the army in 1851 should be added to the population of the several parts of the United Kingdom, also in the proportions indicated in the above Table. Thus the population of England and Wales, at home in 1851 was 17,927,609; add the proportion of the army abroad (34,196) belonging to England and Wales and its population becomes 17,963,805. The estimated population at home in 1859 was 19,746,000, and the population, including its share of the army abroad, was deduced from the following proportion:—

$$17,927,609 : 17,963,805 :: 19,746,000 : x = 19,785,269$$

Great Britain was dealt with on the same principles.

TABLE XXX.—ANNUAL RATE OF MORTALITY per Cent. per Annum, including the Deaths of Soldiers Abroad.

YEARS.	GREAT BRITAIN.	ENGLAND and WALES.	FRANCE.
1855	2.287	2.812	3.594
1856	2.085	2.063	2.308
1857	2.167	2.176	2.233
1858	2.263	2.516	2.266
1859	2.263	2.266	2.670

Thus with an equal number of births, the deaths in the United Kingdom were less than the deaths in France by about *three hundred thousand*.

The salubrity of the soil and of the climate of France is unquestionable, and agricultural pursuits are in themselves favourable to health, but the system of protection has hitherto paralyzed industry in the towns; and the country is generally ill-provided with sanitary arrangements. We shall probably speedily see the effects of freedom in improving the health of the French people, and shall have to struggle hard ourselves to maintain sanitary superiority.

TABLE XXXI.—RETURN showing the AVERAGE STRENGTH of the ARMY ABROAD, in the Years 1856, 1857, 1858, and 1859. Furnished to the Registrar-General by desire of H.R.H. the Commander-in-Chief.

	1856		1857		1858		1859	
	Officers.	Non-commissioned Officers and Men.	Officers.	Non-commissioned Officers and Men.	Officers.	Non-commissioned Officers and Men.	Officers.	Non-commissioned Officers and Men.

TABLE XXXII.—ENGLAND and FRANCE. ESTIMATED POPULATION, REGISTERED MARRIAGES, BIRTHS, and DEATHS, in each of the Years 1855, 1856, 1857, 1858, and 1859.

	ENGLAND and WALES.					FRANCE.				
	1855	1856	1857	1858	1859	1855	1856	1857	1858	1859
Estimated Population	18,786,914	19,045,187	19,304,897	19,523,103	19,746,000	35,118,408	36,305,792	36,292,663	36,767,679	36,436,910
Marriages - -	152,113	159,537	159,067	156,070	167,723	283,546	284,335	290,349	307,218	296,909
Births - -	635,043	657,458	663,071	655,461	669,861	899,550	932,116	929,833	907,638	1,011,787
Deaths - -	425,703	390,506	419,815	449,856	440,781	936,833	835,017	842,961	872,622	972,556

The Population of England and Wales for the years 1856-59 has been deduced by taking the excess of births over deaths since 1851, when the population was enumerated.

* According to the official Enumeration this Population includes 166,428 men, being the Effective Strength of the Army of the East in the Crimea in the month of January 1856. M. Legoyt has favoured the Registrar-General with the Returns of France for the years 1856, 1857, 1858, and 1859. The population for the years 1856 and 1859 has been obtained by taking the excess of births over deaths. The Census is not taken on one day in France, as it is in England, and the date of the French Census is not stated.

The births in France are exclusive of still born.

TABLE XXXIII.—PROPORTION per Cent. of MARRIAGES, BIRTHS, and DEATHS to the Population of England and Wales, and in France, 1855-9.

	ENGLAND and WALES.					FRANCE.

BIRTHS AND DEATHS OF ENGLISH SUBJECTS AT SEA.

I continue the return of the number of deaths which occur at sea, and are registered. This register is exceedingly imperfect as regards both our navy and merchant service.

The mortality, according to the returns of the Registrar General of merchant seamen, is at the rate of nearly 2 per cent. (1·99), thus exceeding the mortality ashore at the corresponding ages, but not differing much from the rate prevailing among persons of all ages.

TABLE XXXIV.—NUMBER OF BIRTHS AND DEATHS OF ENGLISH SUBJECTS IN BRITISH VESSELS AT SEA, reported by the Captains or Commanding Officers of Vessels, and entered in the "Marine Register," pursuant to Sections 21 and 26 of the Registration Act.

	TOTAL.	MALES.	FEMALES.
From 1st July 1837 to 31st Dec. 1859:—

In the 8 years } 1852–59.	1,363,084	25,480	18·7

* Deduced from a return of the number of accounts of wages and effects of seamen (exclusive of masters) dying before the termination of the voyage, received by the Registrar General of Seamen. This return does not include seamen dying ashore in foreign parts, whose wages and effects are delivered to the consuls or officers of the hospitals to which such men are sent; accounts of their effects are sent direct to the Board of Trade.

CERTIFICATES OF BIRTHS, DEATHS, AND MARRIAGES.

Certain events in the lives of men are so important, that in nearly all nations means are taken to register them in the memory of living witnesses, or in enduring records. Marriage is of this nature, for it founds families, and its influence extends over the future lifetimes of

husbands, wives, children, and collateral relatives. In barbarous countries ceremonies, festivals, and religious rites ensure the attendance, and impress the memory of witnesses; but in civilized states the art of writing secures by simpler means permanent evidence, which can be preserved, transcribed, and produced in any place on any occasion. The place and date of a man's birth, as well as his parents' names and other particulars of origin, have often to be proved, and the contemporaneous registers supply evidence of this description of the utmost value. Majority is only one of the instances in which it is of advantage to have at hand such a ready proof of age and relationship as a birth register supplies. The date, place, and cause of death, as well as the fact of death, have frequently to be proved, as in the numerous instances where the acquisition of property of various kinds depends upon the decease of its prior owners. And these facts, if accurately recorded in public registers, can be consulted as long as the records last, or be transcribed on certificates by public officers, and produced in the courts of law.

The early genealogical tables, and the registers of baptisms and burials in churches, proved the practical utility of such documents; and the evidence of fruitless searches all over the kingdom, of lost and of falsified registers, further satisfied a committee of the House of Commons, that great advantage would arise from a new system of registration of marriages, births (not baptisms), and deaths (not burials).* "By such an internal but most needful improvement they believe that the national honour will be promoted, [other nations having contributed more at that time than England to statistical science], that inestimably useful information will be ensured, that great evils, affecting all landed property, and obstructing its descent and sale, and acquisition, will be diminished." The committee also perceived the other advantages actually accruing from the Registration Acts, which came into operation in 1837.

TABLE XXXVI.—AGGREGATE NUMBER OF NAMES ON THE REGISTERS at the End of each Year 1837–59; also the NUMBER OF SEARCHES for REGISTERS at the CENTRAL OFFICE (exclusive of Searches in Non-parochial Registers).

YEARS.	AGGREGATE NUMBER				Number of Searches for Registers at the Central Office.
	Of Persons married.	Of Births.	Of Deaths.	Of Names Registered.	
1837 - -	116,998	164,116	148,701	429,775	Not known.

1858 - -	6,083,452	12,306,337	8,306,541	26,596,430	4,068
1859 - -	6,418,368	13,090,118	8,747,322	28,065,638	5,053

NOTE.—The numbers registered in 1837 are for the Half Year ending December 31st.

* Report from the Select Committee on Parochial Registration, 15th August 1833.

The original registers are lodged in the country with the Superintendent Registrars, and certified copies are sent up every three months to the General Register Office, where they are arranged so as to be readily accessible to the public, who have the right to search the indexes, and to find out any particular entry, by paying one shilling, as well as to procure for two shillings and sixpence a certified stamped copy, which the Act declares "shall be received as evidence of the birth, death, or marriage" to which the same relates, without any further or other proof of such "entry."

The public can also search the Registers, and obtain certificates from the Registrars and Superintendent Registrars, as well as from the Clergy; and the local use of the records will, as new generations spring up, be considerable.

In the year 1859 precisely 1415 searches were made in the non-parochial registers, which number about 7000, from upwards of 3600 congregations, exclusive of 1600 Registers from the Society of Friends. Some of these Registers extend back to the early part of the reign of Queen Elizabeth. The searches at the Central Office in 1859 amounted to 6467; of which 5052 were made in the Indexes of the new Registers. The number of searches was few in the earlier years of Registration; but it naturally increases for a time, although not in regular proportion, as the number of names on the Registers increase. (See Table XXXVI.)

Many certificates are given by the Registrars on the marriage day, and certificates are also sometimes given of births and deaths by the Registrar on the day of registration. The Birth register, however, acquires interest and is more in request every year at the Central Office up to the age of majority; the Marriage register is most frequently consulted at the Central Office a year or two after the event; and the searches of the Death register extend into the past; but in numbers decreasing as we proceed backwards through the avenue of years. *Pulvis et umbra sumus*. The names, like the ashes of millions of mankind, perish; but they designate the links of everlasting generations; so, besides the few that attain immortality, a certain number retain their interest in connection with titles and property for centuries.

Where the entry is found no certificate is required in $4\frac{1}{2}$ per cent. of the cases of birth, $\frac{2}{3}$ per cent. of the cases of death, or $11\frac{1}{4}$ of the cases of marriage. The motives of the searches are not stated; but it is believed that several of the searches for marriages, in which no certificate was required, were of the same kind as the searches for marriages in the imperfect lists which appear in the newspapers. Sometimes an anxious father wishes to know whether his child is married, and instances have occurred in which young ladies, apparently out of pure curiosity, having ascertained that a certain marriage had taken place in a distant part of the country, indignantly refuse to accept the certificate, politely offered by the clerk in attendance.

TABLE XXXVII.—NUMBER of SUCCESSFUL SEARCHES for REGISTERS in the Year 1859.

PERIOD when Search commenced.	SUCCESSFUL SEARCHES FOR			
	Births.	Deaths.	Marriages.	TOTAL.
1837 to 1840 -	577	163	66	806
1841 „ 1845 - -	501	220	101	829
1846 „ 1850 - -	288	343	123	754
1851 „ 1855 - -	303	496	150	849
1856 „ 1859 - -	98	658	141	897
TOTAL - -	1,667	1,886	581	4,133

A great number of the certificates granted at the Central Office are for legal purposes, and are applied for by solicitors.

All the searches are not successful. In the cases of marriage, such as have been referred to, all that is desired is to prove a negative. And so it is in cases of death; people come to ascertain whether the death, of a relative or of an annuitant for instance, has occurred. They apply to put rumours to the test. The births are not all registered, as the registration is unfortunately not compulsory; and the defect was greatest in the earlier years over which searches extend. The Clergy at first imagined that the registration of births might interfere with baptism; and an instance occurred the other day of a clergyman not finding his son's name on the register, and thus being unprovided with the readiest means of proving the boy's age, which was required as a preliminary to an examination.

The necessary information is sometimes incomplete, or the Index fails to point to the right name, through the errors and irregularities necessarily arising under our singularly unscientific system of orthography, which not having kept pace with human progress in other things, imperfectly represents and bears no constant relation to our oral language. The pronunciation of the thousands of christian and surnames is exceedingly arbitrary; and when registration commenced 42 per cent. of the people could not write, and could not, therefore, in many instances spell their names correctly. The Clergy and the Registrars spell the same names differently; for under our deplorable system of spelling, the same sounds are expressed by half a dozen different combinations of letters. The duplicates and copies of the Registers which are made by the Clergy, are sometimes differently and sometimes erroneously spelt; and so it is with the Registrars, who also derive their information from illiterate informants.

A certain number of errors, notwithstanding the careful checking, are also committed in the process of indexing.

For these various reasons 20 in 100 searches give negative results; and singularly enough the proportion is 21 in the non-parochial registers.

WILLS and ADMINISTRATIONS.

It was at one time proposed that the last wills and testaments of the population of England should be placed in Somerset House by the side of the registers of deaths; so that the public could have ready access under the same easy regulations to both classes of documents; the one containing proofs of death and heirship, the other containing the authority for transferring property at the death of its possessors to their successors.

This intention has not been carried out, but a calendar of the wills and administrations in the year 1858, from January 11th to December 31st, inclusive, has been published, with notes setting forth the dates, the registry, the names and descriptions of the testators and intestates, the place and time of death, the names and descriptions of the executors and administrators, and the value of the effects. The calendar does not include the wills, &c. of Scotland and Ireland.

This publication is not perfectly accurate; but it serves to show, in connection with the deaths, some interesting facts concerning the tenure of a large portion of the property of the country. The Tables (pp. 174-180), have been hastily compiled; but the general results, though it is believed they are reliable, as the errors must be within narrow limits, are to be considered only imperfect specimens of the results deducible from these returns, and from the related facts to be dealt with by the Inland Revenue Department under the Succession Act.

Any man not a criminal or a lunatic of the age of 21 and upwards has the power to make a will. How many persons exercise that power? of what amounts of property do they dispose?

The number of persons living of the age of 21 and upwards, was about 10,366,793 (Table I. 1.) in the year 1858; out of whom 210,972 died in the year; and 21,060, or adding a number proportional to the time, for the wills omitted in the first ten days of January, 21,653 left behind them wills. So 189,319, or 9 persons in 10, left no wills; but in 9170 of those cases letters of administration were taken out; so about 30,823 persons died who were declared in the Court of Probate to be possessed of personal estate, such as cash, shares of every kind, stocks, securities, policies, debts due to them, stock in trade, goodwill of trade, horses and carriages, wine, furniture, plate, books, pictures, and jewels; as well as the proceeds of real and leasehold estate directed to be sold. 180,149 left no property which came under the cognizance of the court.

Thus of 100 persons 14·6 left declared property of this kind; and 85·4 left no such declared personal property, although they may have left land alone in some instances.

Sons and daughters, as well as many wives, possess no property, but undoubtedly a large quantity of property passes to successors in small portions untaxed. And much personal property, evading the duty, passes by gift.

TABLE I. 1.—POPULATION AND DEATHS DURING THE YEAR 1858, and the ESTIMATED NUMBER OF WILLS AND ADMINISTRATIONS in the Year 1858.

		POPULATION, aged 21 Years and upwards, estimated to the Middle of the Year 1858.	DEATHS of Persons aged 21 Years and upwards in the Year 1858.	ESTIMATED NUMBER OF WILLS in the Year 1858.	ESTIMATED NUMBER OF LETTERS OF ADMINISTRATION in the Year 1858.
Persons	- -	10,366,793	210,972	21,653	9,170
Males	- - -	5,938,476	107,049	15,558	5,806
Females	- -	5,328,317	103,923	6,095	3,374

TABLE I. 2.—PROPORTION PER CENT. of DEATHS, WILLS, and ADMINISTRATIONS to the POPULATION aged 21 Years and upwards; of WILLS and ADMINISTRATIONS to DEATHS of PERSONS aged 21 years and upwards, and the AVERAGE AMOUNTS to EACH PERSON, during the Year 1858.

	The proportional Number of					The Average Amount to each Person.		
	DEATHS of that Age.	WILLS.	ADMINIS- TRATIONS.	WILLS.	ADMINIS- TRATIONS.	£	£	£
Persons -	2·035	·219	·068	10·263	4·847	2,331	2,998	759
Males -	2·025	·209	·117	15·246	5·778	2,751	3,469	854
Females -	2·044	·114	·061	8·806	3·005	1,871	1,793	687

NOTE.—The Number of Wills and Administrations was not returned for the whole of the year; but in the calculations in this Table an estimate has been made for the 10 days, viz., from the 1st to the 10th January, inclusive, so as to give the results for the complete Year 1858.

The average amount of property disposed of by each will was 2,998*l.* or nearly 3000*l.* (Table I. 2.), by each administration 759*l.*; so the larger properties were dealt with under wills. The average amount severally left at death by about 30,823 persons was 2331*l.*; if the aggregate amount of property in the full year be taken at 71,860,792*l.*, including 64,904,744*l.* under wills, and 6,956,048*l.* under administrations.

Of 102,049 men who died in the year, 15,558* left personal property under wills, 5896 under administrations; so 21,454 left declared property of this kind, and 80,595 left none.

* This and the following numbers are corrected for the year.

For *one* man who left personal property, *four* left no amount of personal property according to the return; or, more exactly, of 100 men, 21·0 left personal property; 15·2 under wills, and 5·8 under administrations.

Women leave less personal property than men. 108,923 women died of the age of 21 and upwards; of whom about 6095 left personal property under wills, 3274 left the same kind of property under administrations. Or out of 100 we had 5·6 leaving wills, 3·0 leaving property for which letters of administration were taken out.

Then the average amount under the will of a woman is 1,793*l.*; and 587*l.* under letters of administration.

The several amounts of personal property have not been summed up; but with a view of showing its distribution approximately, an estimate has been formed on the principle that 806 properties sworn at sums above 4,000*l.* and under 6,000*l.*, are worth on an average 5,000*l.*, and are therefore worth in the aggregate 4,030,000*l.* The great properties of 100,000*l.* or more are taken at their sworn amounts. The whole of the properties, omitting those in the first ten days of January, are by this estimate worth 69,893,380*l.*; of which 57,396,350*l.* were left by men, and 12,497,030*l.* by women.

The Table (p. 181.) is classed from the actual amounts in the scale on which the various duties are levied; and the annexed Table (II. 1, 2, 3, 4) has been framed from it, by distributing the number of properties over several equal intervals, to show the relative number of properties of magnitude ranging from 0*l.* to a million. The higher amounts fluctuate from year to year, and can only be determined from the returns of several years.

Table II. 1. deals with 22,513 properties, each sworn under 1,000*l.*, and shows the numbers and amounts in *ten* degrees of 100*l.* each. Thus 4670 persons died worth 100*l.* and worth less than 200*l.* of personal property; and proceeding step by step, the numbers at the end are reduced to 7466 persons, each leaving 1,000*l.* and upwards, or 64,130,500*l.* in the aggregate. The 22,513 persons (=29,979-7466) severally dying worth less than 1,000*l.*, left only 5,762,880*l.* in the aggregate.

We pursue in Table II. 2. the stream of wealth, until it is reduced to 44,120,000*l.* left by 1189 persons, each dying possessed of 10,000*l.* and upwards of personal property, or of lands directed to be sold making those amounts. So 28,790 persons died, each worth something, but less than 10,000*l.*, and possessing 25,773,380*l.* in the aggregate.

Table II. 3. Again 587 persons, each possessing personal property sworn at sums of 20,000*l.* and upwards, had 35,090,000*l.* of the personal property of the country; whereas the other 29,392 persons died in the possession of 34,803,380*l.* So while the two masses of property are nearly equal, the numbers of the possessors are in the proportion of 50 leaving small fortunes (if we so designate properties worth less than 20,000*l.*) to one leaving the large fortune of 20,000*l.* and upwards. 67 properties are left worth 15,000,000*l.* in the aggregate, each property worth 100,000*l.* or more, and sworn at less than 1,000,000*l.* of personal property. In this year only *one* property was sworn at the highest figure, 1,000,000*l.*; but that sum has been exceeded in previous years. The probate tax is not levied *pro rata* on all properties; but is as a general rule levied at the lowest rates on the great properties.

The possessors of the various properties are described in the usual legal phraseology, which is neither very definite nor very accurate. But it appeared to be well worth the while to classify the possessors of the various personal properties left under will or administration.

The Census classification was employed for the purpose.

TABLE II. 1, 2, 3, 4.—NUMBER OF WILLS AND ADMINISTRATIONS returned during the YEAR 1858 (from 11th January to 31st December 1858), and the AMOUNT OF PROPERTY represented by them.

1000000 and upwards	—	0	—	—

Columns 2 and 4 may be read thus: In the first series showing the distribution of Wills and Administrations under £1000 by hundreds, the number of Wills and Administrations representing values under £100 was 8293, making in the aggregate £411,105. 4670 represented the properties of the value of £100 and under £200, making in the aggregate £700,500. 2512 represented properties of the value of £200 and under £300, making in the aggregate £636,000. In the second series, showing the distribution under £10,000 by thousands, 799 represented properties of the value of £8000 and under £4000, making in the aggregate £3,722,000, and so on for the other series.

Columns 3 and 5 may be read thus: Table II. 1. There were 29,979 Wills and Administrations disposing of properties of values under £1,000,000, or in the aggregate £69,893,380;—£1,676 disposing of properties of the value of £100 and under £1,000,000, making £69,468,375 in the aggregate;—17,096 disposing of properties of the value of £200 and upwards, making £68,781,775 in the aggregate. Table II. 2. 1861 disposing of properties of the value of £5000 and upwards, making in the aggregate £49,980,000. Table II. 3. 587 disposing of properties of the value of £20,000 and upwards, making in the aggregate £34,696,000 (or about one-half of the whole amount of property represented by all the Wills and Administrations in the year); and Table II. 4. 10 disposing of properties of the value of £300,000 and upwards, making in the aggregate £5,100,000.

Table (pp. 174-177) shows the amounts of property left under 5928 wills by 2293 spinsters, 285 wives, and 3350 widows. The titles, professions, and occupations of men are given in considerable detail. The Table deserves careful study. Of 66 persons dying possessed of 100,000*l.* and upwards, *one* was a woman; 10 were peers and other titled persons. 37 are described as esquires or gentlemen; but solicitors will be able to say whether these designations are not applied to men who have made large fortunes by trade, commerce, and manufactures. The series is completed by referring to the classification in Table (pp. 178-180) of the other possessors of personal property, on which letters of administration were granted in the year.

It will be observed that the accumulated wealth of this country is in the hands of no one class of the community. It has been created and it is employed in every branch of industry.

This analysis of properties is based on the probates, &c. of personal properties proved in England. It includes debts, and the properties are probably sworn at their full nominal value, so the amounts are overstated; but they can be checked by comparing the amount with the amount of personal property on which legacy duty was actually paid, not precisely but nearly in the same year. The following Table III. has been constructed from Table (p. x.) in the recent interesting Report of the Inland Revenue Department. Here debts are deducted, and property passing to the husband or wife is omitted, as on it no duty is levied. The schedules which the department issues, as well as the 55 Geo. 3. c. 184. and 22 & 23 Vict. c. 36., should be read by writers who wish to use these materials.

TABLE III. — AMOUNT of PROPERTY upon which LEGACY and SUCCESSION DUTIES were paid during the Year ending 31st March 1859.

Only a part of the property of the country paid legacy duty until the year 1854, when the Succession Act passed. The tenure of landed property is by no means so simple as it might be; but the succession duty is levied "on real property, which includes all freehold, copyhold, customary, leasehold, and other hereditaments, whether corporeal or incorporeal." The "saleable value" and the "annual value" of each property is returned by the "successor" or trustee, and after this is scrutinized the taxable value is fixed by the department, on the assumption that this

said value is equal to the value of annuities on the lives of the successors. The duty is paid by slow instalments, so the department alone can tell how much remains out of this account.

The property of the United Kingdom on which the legacy duty was paid in the year ending March 31st 1859 amounted to 65,441,611*l.* What was the value of the real property on which the succession duty was paid? The Inland Revenue Department has not yet given that portion of their returns; but if we assume that the property is taxed on half its saleable value, it will amount in the aggregate to 58,485,260*l.*, and even then the landed possessions at death are of probably less value than the property taxed as personal under the Legacy Act, after allowing for real property directed under will to be sold. Upon this assumption, 123,926,871*l.* pass by death to every generation of successors. From this—after allowing for property passing by gift—may be obtained an approximation to the total value of the real and personal property of the United Kingdom existing in taxable portions, and in all the various forms—except that living and inherent in the population itself. But it would be futile to proceed further, as the required data will probably be supplied at an early period by the Inland Revenue Department in their Annual Report.

My object has been only to show the connexion between the deaths and the properties passing at the close of every English life to its successor. And it is certainly a remarkable fact, that, taking one death with another, including men, women, and children, more than 100*l.* of property paying legacy duty, and perhaps 187*l.* of property of every kind, is left for the benefit of successors, in the United Kingdom.

The causes of death in England and Wales in the year 1859 are discussed by Dr. Farr in a letter addressed to me, which will be found in the Appendix.

I have the honour to be,

Sir,

Your faithful servant,

GEORGE GRAHAM,

Registrar-General.

* The Registration Counties consist of groups of entire Registration Districts; which Districts are, in general, identical with the Poor Law Unions. As the principle adopted has been to place a District or Union which extends into more than one County with the County in which either the principal town or the greater part of the population is located, the limits of the Registration Counties differ more or less from the boundaries of the Counties proper.

††

the—especially of illegitimate children in London and large towns—escape registration.

* The Districts are collections of contiguous Parishes or Places combined for purposes connected with the Registration of Births, Deaths, and Marriages; and are generally identical with the Poor Law Unions of the same names. The Districts, 620 in number, are arranged according to their local position under the Registration Counties.

† For a table of the Deaths in the principal Public Institutions situated in the Districts of London see pages 83-4.

‡ See Note (7) p. 6.

Note. Whenever the minus sign is prefixed to the number in the column headed "Excess of Births over Deaths," it denotes that the Births in the District, instead of exceeding the Deaths were, in fact, less than the Deaths to the extent stated.

Note.—The Sub-districts are sub-divisions of the Districts, and comprise the Parishes or Places in which the Births and Deaths are registered by Registrars severally appointed for that purpose.

The letter *W* denotes that the Sub-district contains within its limits a Workhouse belonging to the District or Union; *w* indicates that a Workhouse belonging to another District or Union is included.

Whenever the minus sign (—) is prefixed to the numbers given in the Column headed "Excess of Births over Deaths," it denotes that the Births in the Sub-district, instead of exceeding the Deaths, were, in fact, less than the Deaths to the extent stated.

The Excess of Deaths over Births in several of the Sub-districts of London is attributable to the mortality in Hospitals.

For the number of Deaths in the Hospitals, Workhouses, and other principal Public Institutions in London, see pp. 93-4.

* See Note (†) p. 4.

ENGLAND.—SUPPLEMENTARY TABLE of the

[The principles upon which the Causes of Death are tabled have been explained in previous Annual Reports. It will be sufficient to state now that all the Diseases, either having a distinct character, or fatal to any considerable number of persons, are classified under 112 heads; some of which, however, include groups of very distinct diseases,—such as are fatal to only a few persons, or diseases which are often confounded with other diseases. The rule has been to refer the distinct diseases to heads under which the cases were so numerous, that the additional numbers would not interfere with the calculated proportions. Thus, *mumps* was the cause of 89 deaths (Males and Females) in the year 1859, and *scarlatina* of 19,907. The mortality of

DEATH at different Periods of Life, in the Year 1859.

duced by dividing the deaths from that disease, *plus* 89, by the total population of 1 be found to differ little from the mortality from scarlatina alone. Where it is a correction, however, can now be made by means of the following Supplementary ining many of the deaths from distinct diseases, such as mumps, glanders, epistaxis, ngrene, polypus, rickets, bronchocele, &c. &c., and deaths from other forms of as softening of the brain (necrencephalus), which are returned in many cases heads, as paralysis, &c.

les are an extension of the Tables of Causes of Death in England, pp. 120-125.]

Note.—In calculating the average annual rate of mortality from All Causes in London a correction has been made by adding the deaths in Hospitals proportionally over every district.

* The Holborn and West London Districts are combined in the calculation of mortality in the ten years 1841-50.

† The Stepney and Mile End Old Town Districts are combined in the calculation of mortality in the years 1841-50.

‡ Excluding Port Pitt and Port Clarence, the annual mortality in the Medway District was 34 to every 1,000 persons in 1859.

1851, Average Annual Rate of Mortality from All Causes in the Ten Years 1841-50, and
 deaths from several Causes in the Year 1859, in the DISTRICTS of England—continued.

II.—SOUTH EASTERN COUNTIES—continued.

* Excluding Hanwell Lunatic Asylum, the mortality in the Uxbridge district was 20 to 1,000 persons living.
† In calculating the mortality for the ten years 1841-50 the districts of Wycombe and Henley are combined, as above.

tion 1851, Average Annual Rate of Mortality from All Causes in the Ten Years 1841-50, and Deaths from several Causes in the Year 1859, in the DISTRICTS of England—*continued.*

IV.—EASTERN COUNTIES.

DISTRICTS.	POPULATION, 1851.	Average Annual Rate of Mortality from all Causes to 1000 Persons living.	DEATHS FROM SEVERAL CAUSES IN 1850.

LETTER to the REGISTRAR GENERAL on the CAUSES of DEATH in
ENGLAND, by WILLIAM FARR, Esq., M.D., F.R.S., D.C.L.

YEAR 1859.

SIR,

I BEG to submit to you the returns of the causes of the deaths which have occurred during the year 1859 in England and Wales.

Few men live the natural lifetime of a hundred years; and as their bodies live, so they also die, by the action and reaction of their elements and of the elements of the external world.

The types of diseases have probably undergone as many changes as the human species, which according to the great hypothesis of Darwin, is itself the crowning offshoot of simpler forms; but the evidence of pathologic origins is rarely attainable, as species of disease are merely passing and necessarily fleeting states of the human organism. They do not offer the same unity of form as an animal or a plant; and are in every way less sharply defined. Yet the new species are generated by the same law; they are at first as varieties confounded with old types, and are only recognized as distinct species when they have existed for some time; so it is impossible to fix on the precise point of origin. Diphtheria is an example. It obtains a distinct line in the Tables of this year for the first time. Yet many indications of the previous appearances of a disease of the kind are found in medical history. Nay, epidemics of diphtheria are clearly described in the seventeenth century by Italian and Spanish writers. Some obscurity, however, hung round its history; and in Fothergill's account, which Sprengel properly designates classical, the symptoms are confused by the introduction of the eruption of scarlatina into his description. With that disease, with quinsy, and with other phlegmonous affections of the throat, as well as with croup, diphtheria, which is a better name than *angina membranacea*, was often confounded; and its frequent association with *scarlatina* in epidemics, justifies the inference that the *diphtherine*, its *materies morbi*, is some modification of *scarlatinine*.

It is evident from the annexed Table that diphtheria was confounded down to 1858 with cynanche, and to get an approximation to the actual deaths from the epidemic, the two forms must be put together. And when this is done the rapid and regular progress of the great epidemic becomes evident. In 1859 diphtheria (including cynanche) was fatal to 10,184; scarlatina to 19,310 persons. Both diphtheria and scarlatina attack young children; but the relative fatality of the two diseases

TABLE (1).—DEATHS in ENGLAND AND WALES from SCARLATINA, CYNANCHE MALIGNA, and DIPHTHERIA, for each of the Years 1855 to 1859.

YEARS.	Total.	Scarlatina.	Cynanche Maligna, and Diphtheria.*	Cynanche Maligna.	Diphtheria.

Causes of Death.

at different ages. Scarlatina as a general rule does not follow the law of recurrence for diphtheria has to be discovered, and it is to which it interferes with other diseases. The fertility of nature in the production of new diseases, is a proof of the necessity of perpetual vigilance in observing and combating them to the utmost of our ability at their sources; for in its progress the solidarity of the human race is unquestionable.

TABLE (2) — ENGLAND AND WALES. DEATHS and AVERAGE ANNUAL MORTALITY from DIPHTHERIA with CYNANCHE MALIGNA, and from SCARLATINA during the Five Years 1855-59.

NOTE.—In calculating the rate of Mortality in the above Table the population in the middle Years 1855-59 (1857) has been obtained on the assumption that the annual rate of increase of population was uniform between 1851 and 1861, and at the same rate at all ages.

TABLE (3)—DEATHS in ENGLAND and WALES from DIPHTHERIA and CYNANCHE MALIGNA, in each of the five Years 1855-59.

The discrimination of diseases at one time confounded, leads necessarily to the recognition of new types, and to new names. Thus under dropsy, diseases of the heart and kidneys were masked; and heart diseases of various kinds, as well as nephria, are recognized as the seat and origin of diseases which were called simply dropsy in former times. The rise of the specified deaths by nephria (Bright's disease), from 430 in 1850 to 1258 in 1859, is due to recent medical discoveries; some of the cases which were then classed under dropsy are now distinguished. The increase of deaths by cancer and heart disease is due to similar causes. Ideas have changed, but this must not be confounded with any corresponding change of natural phenomena. Nature changes, but our ideas of her processes change still more frequently. An alteration of nomenclature will necessarily occur with every new interpretation of nature; so it should be kept within strict limits, and be borne perpetually in mind by the student in comparing the morbid phenomena of distant ages and localities.

The meteorology of the year, and the prices of provisions in their bearing on public health, have been already discussed in your Report. But I submit below a supplementary Table of prices, to illustrate the decimal system of money.

In all statistical calculations of a scientific character, the decimal system is employed; as it would be impossible on the system of 4 farthings to a penny, 12*d.* to a shilling, 20*s.* to 1*l.*, to perform the various calculations, giving the value of annuities, the premiums of life insurance, and other results, in any moderate time. Additional clerks would have to be employed; and much time would be wasted. The same waste of time occurs in the ordinary system of accounts; it is therefore desirable to familiarize people with the units decimally related, which suffice for the expression of all prices and values. These units are three. (1.) The 1*l.* sterling, which requires no explanation; (2.) the *florin* or two-shilling piece, of which ten make 1*l.*; and (3.) the *mil*, of which 100 make a *florin*. The *mil* differs but slightly from a farthing; for 25 *mils* and 24 farthings

TABLE (5)—PRICE OF WHEAT, MEAT, and POTATOES in the Years 1852 to 1859.

(Prices in Shillings, Pence, and Vulgar Fractions of a Penny).

	Average Prices of			Average Price of Wheat per Quarter in the Market Towns of England.

1858 -	5½	5½	120 0	44 3	46 5	44 1	44 7	41 9
1859 -	5½	5½	94 0	48 10	40 8	47 3	44 0	43 4

(Prices in Florins and Mils, on the Decimal System).

	Mils.	Mils.	Flor. mils.	Flor. mils.	Flor. mils.	Flor. mils.	Flor. mils.	Flor. mils.
1852 -	17	30	43 30	30 42	30 42	30 42	30 58	30 21
1853 -	20	24	65 25	26 46	22 79	22 25	23 92	34 92
1854 -	23	24	59 20	36 21	39 75	39 17	31 92	34 0
1855 -	23	24	50 25	37 23	34 96	36 67	28 4	39 67
1856 -	23	24	43 75	34 59	36 17	34 23	26 13	31 67
1857 -	23	24	60 23	28 21	23 42	28 26	29 96	26 0
1858 -	23	23	60 00	22 12	23 21	22 04	22 29	30 26
1859 -	23	24	47 00	21 92	30 23	23 63	22 0	21 67

are of the same value as 6d. : and no further change would be required in our coinage than by a simple legislative enactment, to make after certain date the halfpenny 2 mils, the penny 4 mils, and 25 *halfpence* change for a shilling, 25 *pence* change for a florin.

The decimal system, it will be observed, expresses the prices of the common articles of food intelligibly ; thus mutton was 24 mils (farthing nearly) per lb., potatoes 47 florins a ton, and wheat 21 florins 92 mils per quarter, in 1859.

CLASSIFIED CAUSES OF DEATH.

The causes of death were declared in 432,476 instances ; in 2821 cases death was sudden but was not ascertained, and of the causes of 548 deaths no information was supplied.

I. ZYMOTIC DISEASES.

106,645 deaths were referred to this class of causes, which were fatal to 5 in 1000 of the population, and produced one fourth of the total deaths. *Small-pox* destroyed 3848 people, chiefly children, who had not been vaccinated. It is an instance of the rigor with which the infringement of sanitary laws is visited ; for the children perish, and the parents lose their offspring, by the neglect of a precaution of the simplest kind. In 19,907, children chiefly, died of scarlatina ; 9587 of diphtheria. In the previous year 30,317 deaths are referred to the head of scarlatina ; but they included 4836 deaths stated to be by diphtheria, and 1770 deaths declared to be by cynanche maligna or by some of the indefinite forms of sore throat.

The progress of these three forms of disease, of quinsy and of croup, is shown in the Tables.

Whooping-cough was fatal in 8976 cases. The fever which was fatal in 15,877 cases, includes the three forms of continued fever : typhus generated and diffusible by the exhalations of people living in crowds ; typhoid fever (typhia) diffused apparently by the feces of the sick ; and relapsing fever (typhina), all of which have been so well defined by Dr. Jenner. The diffusion of medical knowledge will render their analysis in the national tables practicable. Erysipelas is still of frequent occurrence ; in a recent outbreak at the Winchester Infirmary, its fatal effect was traceable to a cesspool. Metria (puerperal fever) an allied disease was unusually fatal ; the deaths of 1238 women were caused by the disease ; and 2258 by the other diseases incidental to child-bearing ; which will be referred to subsequently. Carbuncle is less prevalent and fatal than it was ; and happily influenza has not prevailed epidemically. Dysentery was fatal to 1379 persons ; diarrhoea to 18,331, cholera to 887. Cholera and more particularly diarrhoea were more fatal than they were in the previous year. This is partly accounted for by the high temperature of the summer quarter, acting on the impurities of the air and water. The temperature was 3.3° above the average of the season. Ague was more, remittent fever less than usually prevalent ; and rheumatism 2124 deaths were referred.

Syphilis is every year increasing in frequency ; it is congenital. There can be no doubt that parents who have suffered from secondary syphilis often transmit the seeds of disease and death to their offspring.

Hydrophobia is happily much less fatal than it was in former years. 4 persons died of the disease. In the last four years 14 persons died of hydrophobia ; whereas 56 persons died of the same disease in the four years ending in 1855. Of glanders 3 persons died.

Passing to another order of facts, diseases directly referrible to defective nutrition, it will be seen in the Table that 52 deaths are said to have resulted from privation, 1017 from the want of breastmilk, 342 from purpura or scurvy. The feeding of children, whose mothers do not supply them with milk, is undoubtedly defective, and deserves the attention which it is now attracting from enlightened philanthropists.

We have but an imperfect conception of the number of deaths from excessive drinking ; but 545 deaths were directly ascribed to delirium tremens, and 345 to intemperance. The deaths in the year from the two forms of alcoholism were 890 ; exceeding by 178 the deaths, 712, in the previous year. The high temperature probably increases thirst, and at the same time renders the action of alcoholic liquors more dangerous. For *delirium tremens* is much more fatal in the hot than in the cold months of the year. Thus in the twenty years, 1840-59, while the deaths ascribed to intemperance were equally distributed, the 2,546 deaths by delirium tremens were distributed over the four quarters unequally : 563, 655, 725, 603 ; the smallest number occurring in winter (563), the greatest in summer, giving 1,166 in the cold, 1,380 in the hot half of the year. During the last three years, 1858-60, we have this result : in the cold months from October to March, the deaths of 140 persons by delirium tremens were registered in London ; in the hot months, from April to September, the deaths by the same disease were 204. The effect of the alcohol and the heat in producing delirium tremens is greatest at the age from 40 to 60 ; but it is also apparent at the earlier age of 20-40.

1858-60. — Seasons.	Deaths ascribed to Delirium Tremens in London.

Hot Season. April, May, June, } July, Aug., Sept. - }	204	-	89	103	11	1

In the tropics, the combined action of spirits and sun-heat often apparently produce what is called sunstroke or apoplexy.

Of the parasitic diseases thrush is the most fatal ; and a great majority of the deaths were of infants under one year of age. The ova of worms must be derived generally from impure river waters into which the refuse of towns is poured ; and although they do not frequently prove fatal, they are troublesome and nauseous, and often the cause of disturbance in the system. Scabies, and other skin diseases attended with parasites, require constant attention.

II. CONSTITUTIONAL DISEASES.

Constitutional diseases killed 81,788 persons, chiefly in the middle and advanced periods of life ; 16,433 of diathetic, 65,355 of tuberculous diseases.

Gout is nearly stationary. Thanks to the more intelligent system of dining which the wealthier classes, wearied of this racking disease, will probably introduce, we may hope to see it rapidly decline. Dropsy and cancer exhibit changes which have been already ascribed to the progress of medical diagnosis.

Tuberculous diseases, including phthisis or consumption, the most fatal of all, increased from the year 1850 to 1853, and since that year have again decreased, and most decidedly if we take the increase of population into account. More than 3 in 1000 of the population died of these diseases, which caused 15 out of every 100 deaths. Phthisis was the cause of 12 out of the 15 deaths.

III. LOCAL DISEASES.

These are chiefly inflammations, and the resulting changes of the principal organs of the body; they prevailed widely, and were fatal to 159,686 persons. The brain with its appendages, the heart and the respiratory system, are the vital organs of man; accordingly we find 54,531, 17,133, and 59,853 deaths referred to affections of the three systems. Of

† Order 2, comprising Violent Deaths in Battle, is omitted, as inapplicable to the civil population.

‡ The cases of angina membranacea which would now be put to diphtheria were formerly classed under the general name scarlatina, but were distinguished in the notes.

is 25,954, chiefly children under one year of age, died. This is striking and distressing, and unmistakable; but it is probably of the disease, which is the result of organic lesions, and local that are never discovered. The irritation of teething, and the arising from improper food, often give rise to convulsions in Cephalitis is most fatal in early life; epilepsy supervenes early, in the highest degree of intensity in manhood; insanity follows; and paralysis prove fatal at still more advanced ages. The

statistics of the insane require to be specially studied, as where they die of consumption, or of other diseases, the deaths are returned under those heads. The numbers in the Table do not represent the persons dying in a state of insanity, but the number of deaths of the insane referable to no other cause than insanity.

† Up to the year 1857 cases of so called "debility" and "premature birth" were classed together; when the new classification was introduced "premature birth" was kept apart, and "debility" and "atrophy" were thrown into two lines. This accounts for the changes in the table numbers.

Right was returned as the cause of seven, grief of eight, rage of five, society of one, mental shock of one, melancholy of forty-seven deaths. The ages are distinguished in the Supplemental Table, where will also be

ENGLAND. CAUSES OF DEATH in 1859. Proportional Numbers dying from each Class of Causes, and from each Cause.

* Order 2, comprising Violent Deaths in Battle, is omitted, as inapplicable to the civil population.

found besides the deaths from neuralgia and disease of the spinal marrow, those from softening of the brain. 23 deaths are referred to eye diseases; 67 to ear diseases, the ear organs being in almost immediate contact with the membranes of the brain. It is questionable whether the deaths of 34 males and of 20 females are due to idiopathic tetanus; for it is not improbable that the informant neglected to discover or to report the external cause in some instances. Only one death, of a young woman, by catalepsy is recorded.

Heart diseases, and diseases of the large blood vessels destroyed 8,508 males, and 8,625 females. Of aneurism 268 males, and 103 females died.

The most fatal diseases of the respiratory organs are bronchitis and pneumonia; and these inflammations of the tubes and cells of the lungs, running into each other, are not always accurately distinguished. It is worthy of remark that while the deaths by pneumonia have risen in nine years from 20,303 to 24,514, the deaths from bronchitis rose from

to 25,998. And there is no corresponding or countervailing change from consumption, or from the other pulmonary diseases.

digestive organs are elaborate and subject to various kinds of diseases, which, however, are not so frequently fatal as those already mentioned. 19,842 persons died of diseases of the digestive organs; 12,598 from the diseases of the stomach and intestinal canal, 7,160 from the disease of the pancreas, 7160 from liver disease, and 62 from disease.

Diseases of the urinary organs were the causes of 4736 deaths. The details of the various forms of these diseases are shown in the Tables.

Deaths by the diseases of each of the next three orders of disease were nearly equal.

Diseases of the organs of generation caused 1199 deaths; exclusive of deaths by childbirth and syphilis, appearing under other heads.

Diseases of the organs of locomotion, chiefly affecting the joints, caused 1285 deaths; including 6 from exostosis, 4 from mollities ossium, and 12 from necrosis, which occurred in 37 men and 18 women.

Diseases of the integumentary system induced 1107 deaths, including erysipelas, phlegmon, ulcer, and several curious varieties of skin diseases.

IV. DEVELOPMENTAL DISEASES.

Now enter upon a new order of diseases. They are attendant on growth, nutrition, and development of the body, and are known as developmental diseases—of children (12,300), including premature birth, infancy, and teething; paramenia and childbirth follow (2314), accidental to women in the procreative age; and then senescence, decay of old age, to which 27,104 deaths are referred.

Strophy, or an apparent cessation of nutrition, and debility, are the agents to which the deaths of 27,990 persons, chiefly children, are due. In Table 6. it will be observed that the deaths by debility of children were classed with those from premature birth up to 1857, and that year with atrophy.

Deaths of mothers in childbirth have been analysed, and the results exhibited in the Tables 9, 10, and 11.

TABLE (9).—MORTALITY OF WOMEN BEARING CHILDREN at different Ages in the Five Years 1855-1859.

Estimated Number of Women bearing Children, 1851.	Deaths distinguished in the Five Years 1855-1859.				Annual Rate of Mortality.			
	Placenta Previa and Flooding.	Puerperal Mania.	Puerperal Convulsions.	Rupture of Uterus.	To every 100 Mothers bearing Children, the Number of Deaths by			
					Placenta Previa and Flooding.	Puerperal Mania.	Puerperal Convulsions.	Rupture of Uterus.
107,440	230	102	481	16	*074	*035	*163	*005
328,720	806	215	342	78	*097	*036	*041	*009
166,140	1,014	80	183	61	*237	*019	*043	*014
7,545	61	4	11	3	*307	*090	*035	*015
678,845	2,101	401	1,017	158	*133	*025	*064	*010

In calculating the annual mortality a correction has been made for increase of population. The annual rate of (females aged 15-55) 1841-51, was .01200, and it has been assumed that the number of women bearing children increased at a uniform rate at each of the ages in the Table. At the age 15-25 there were 9,992 deaths from birth and 5,288 from metris in the 5 years 1855-59. Of the 9,992 deaths from childbirth only 4,834 were 1 under any of the definite headings of the class (see Supplemental Table of Causes of Death); 5,158 deaths under each of the headings in the above Table are assumed to have been understated in the original returns, and raised accordingly in calculating the mortality. A similar correction has been made for each age class.

* Exclusive of one death at age fourteen, in the year 1859.

V. VIOLENT DEATHS.

14,649 persons were killed by violence in the year. This is a confession for a nation humane, civilized, and skilled in all the art make. It is exclusive of any deaths in warfare abroad. 13,056 of deaths are ascribed to accident or negligence; 338 to homicide coroners' juries; 1248 to suicide, and 7 to public execution.

Of the deaths by accident or negligence 5482 were brought about fractures and contusions, 2978 by burns and scalds, 2494 by drowning, 104 by gunshot wounds, 75 by cuts and stabs, 279 by poison, 95 suffocation.

Of 100,000 persons 75 die of violence annually.

I referred in my nineteenth letter to the imperfect investigation violent deaths arising from the unsatisfactory state of the coroner's office and a subsequent inquiry has led to an improved arrangement for paying the coroners by salaries. We shall hope now to see great improvement in the returns of violent and sudden deaths; so that the information throw new light on their causes and form the basis of a thorough searching inquiry into the subject.

DEATHS BY LIGHTNING.

The electric force is distributed over the whole face of the country and it differs in tension not only in different times, but at different places. We have no accounts of the trees, plants, or animals which it destroys by violent discharges in the several parts of the country; and it is since the act for registration that any complete account of the death by lightning in England and Wales, has been obtainable.

TABLE (10).—MORTALITY FROM METRIA at different AGES, in the Five Years 1855-1859.

Ages of Mothers.	Estimated Number of Women bearing Children, 1851.	Deaths from Metria in 1855-59.	Annual Number of Deaths from Metria to 100 Mothers living.
15-25	107,440	1,502	*200
25-35	326,720	2,363	*184
35-45	166,140	1,300	*153
45-55	7,545	64	*158
15-55	600,845	5,228	*161

In calculating the annual rate of mortality, a correction has been made for increase of population.

TABLE (11).—DEATHS OF WOMEN IN CHILDBIRTH in the Thirteen Years 1847-1859.

YEARS.	Number of Deaths from			Deaths of Mothers to 10,000 Children born alive.
	Metria and Childbirth.	Metria.	Accidents of Childbirth.	
1847 - -	3226	784	2442	60
1848 - -	3445	1345	2060	61
1849 - -	3339	1165	2174	58
1850 - -	3272	1118	2159	55
1851 - -	3290	1009	2281	53
1852 - -	3317	972	2375	52
1853 - -	3063	795	2268	50
1854 - -	3009	954	2055	47
1855 - -	2979	1079	1900	47
1856 - -	2868	1067	1801	44
1857 - -	2787	836	1951	43
1858 - -	2181	1068	2068	46
1859 - -	2406	1236	2236	51
13 years 1847-59 -	41,153	12,445	27,707	51

From the annexed Table it will be seen that 18 persons were killed by lightning in the year 1857; 26 in the year 1858; and 17 in the year 1859. They were nearly all persons in out-of-door occupations. 52 were males, 9 were females. 54 were of the age of 15 and upwards; one only was a female child under 5 years of age.

Persons are therefore much less likely to be struck by lightning indoors than out in the fields, and under trees.

With better observations, which we expect from the coroners, exacter rules may be laid down.

I have the honour to be,

Sir,

Your obedient Servant,

WILLIAM FARR.

To
The Registrar-General.

TABLE (12).—DEATHS by LIGHTNING in the Three Years 1857, 1858, 1859.

g Index furnishes a reference to the *Number* of each *District* in the
l arrangement adopted in the Tables of Abstracts contained in the Report,
s running consecutively from 1 to 623.* In forming the alphabetical
the principle is adopted of placing compound names in the order in
are pronounced: thus, East Ashford will be found under the letter E, and
as Ashford, East.]

REPORT

TO

The Right Honourable Sir GEORGE GREY, Bart., M.P., Her Majesty's
Principal Secretary of State for the Home Department,
&c. &c. &c.

*General Register Office, Somerset House,
15th April 1862.*

SIR,

I HAVE the honour to submit to you my Annual Report for the year 1860.

The aggregate number of names enrolled in the Register Books of England and Wales, in that year, was not equal to the number in 1859; but the decrease is not a subject of regret, for it arose chiefly from the fact that the mortality was comparatively low in 1860. The deaths were 18,000 less than they had been in the previous year; the births were nearly 5000 less; but the marriages were more numerous than they had been either then or at any former time.

The men and women married in the year were 340,312; the children born 684,048; the persons of all ages who died 422,721; and together they formed a total of 1,447,081, which, however, does not consist to its full extent of *different* persons; for it unfortunately happened to a certain proportion of them, that they were implicated in two out of the three events. To many, the first dawn of life abruptly descended into night. To some the year of marriage was the year of death.

The facts to which the present Report relates belong to the year which preceded that of the Census. When the population was enumerated on 8th April 1861, it was found to be 20,066,224; and that its rate of increase in the last decennium had been 12 per cent. Accepting these

TABLE I.—Estimated POPULATION, with the Number of MARRIAGES, BIRTHS, and DEATHS registered in England in each Year from 1838 to 1860.

1858	19,471,472	156,070	312,140	655,481	449,656	205,825
1859	19,686,803	167,723	335,446	689,581	440,781	248,800
1860	19,902,918	170,156	340,312	684,048	422,721	261,327

* The Population of each of the years since 1851 is deduced from the ascertained rate of increase observed in the twenty years, 1841-61; and an allowance is made for the decrease in the rate during the latter ten years.

results in conjunction with another fact which the last four censuses have revealed, viz., that the rate of increase has constantly descended during the last forty years, it is estimated that the population of England in the middle of the year 1860 was 19,902,918.

It will serve, with a multitude of other facts that are familiar to most readers, to give a vivid impression of the *vitality* of the English people to state that when young men who have now barely reached their majority were born the annual marriages were about 120,000, and these in 1860 they exceeded 170,000.

The marriage-rate was well maintained through the greater part of the year, but especially in the Spring quarter, when Cheshire and Lancashire and generally the manufacturing districts appear to have regarded their position with a cheerful spirit. The average marriage-rate in 23 years was 1·64 per cent. (in other words 164 persons were married to 10,000 living in the population); but the rate in 1860 rose to 1·71. The average birth-rate in the same series of years was 3·311 per cent., whereas the rate in this year was 3·437; a satisfactory result, though not equal to that of 1859. The average death-rate was 2·231 per cent., but 1860 was unusually healthy, and its rate of mortality did not exceed 2·124, which is less than it had been in any of the twenty-two years during which the Registration Act had been in operation, with the exception of 1841, 1845, 1850, and 1856.

The whole year will be distinguished in meteorological annals; but was the weather of the last six months that appears to have exercised a beneficial influence on the public health, and to have invested the fact with the value of a crucial experiment. At Greenwich the cold weather which set in towards the end of January, continued with the exception of three weeks in May till the end of June. Wind, with frequent gales of long duration, prevailed during the whole period. The summer (July, August, September) witnessed a continuance of cold weather, which was "bad," in other respects besides cold; there was frequent rain, much cloud, scanty sunshine. But there was little diarrhoea, and the mortality fell remarkably. The last quarter of the year was generally cold; from the

Mean . .	·820	1·689	3·311	2·231	122	61	30	45

NOTE.—The Table may be read thus:—In the year 1838 to every 100,000 persons living there were—marriages or 1542 persons married, 3029 births, 2238 deaths; the number of persons living to every married man, birth or death, was 130, 65, 33, and 45 respectively. A correction for increase of population is made in calculating the above results.

18th December to the 29th the weather was of singular severity, the temperature at Greenwich having fallen in two instances to 7° and 8°. At Nottingham it fell to 8° below zero. There is no instance on record of a mean temperature for the four important months June, July, August, and September, being so low as it was in 1860. The fall of rain at Greenwich in June was 5·8 in. The rain-table does not extend further back than 1815, but in the long period that elapsed since that year there was no example of so great a fall in June. This amount, however, was greatly exceeded in more southern parts, especially Hampshire. The mean temperature of the air was below the average of 19 years in every month, except January, May, and October. The rain collected at Greenwich was 32 in., which is nearly 7 in. more than the average; and it fell on 192 days. The cold checked the development of those seeds of disease with which human beings are surrounded, particularly in towns; the abundant showers and high winds swept them away; and the result was a salubrious summer.

The fall of rain was greatest between latitudes 49° and 51°, near first of which the amount in the year was 48 in. ; next to that region was greatest between 53° and 56°. The smallest quantity fell at station in the intervening space.

The excess of births over deaths was great ; it amounted to 261,3. Reckoning from the middle of the previous year to the same period 1860, the natural increase may be stated at 716 daily, but the actual increase was probably 592. If the latter estimate is correct, it follows that while Irishmen, Scotchmen, colonists, and foreigners poured the tributary rills into the population, the great stream of emigration reduced it below its *natural* level, and the result was an average daily loss of 124 persons. The Emigration Commissioners account for a considerable part of the efflux, for it appears from their Reports that the number of emigrants of English origin returned to them was about 33,339, or an average of 91.

MARRIAGES.

There were 170,156 marriages in the year, of which 137,370 were solemnized according to the rites of the Established Church. It is mentioned above that marriages were more numerous than in the 1

* Disregarding the decimal point, this will read 804 marriages were celebrated every 100,000 of the population ; 135 were marriages by licence, 669 were marriages by banns. It may be assumed that these two groups represent the whole of the *concurrent* classes of society, whether belonging to the Church or not.

vious year; and it appears that all denominations, established and non-established, participated more or less in the increase. A very trifling decrease in Jewish marriages, which numbered 312, constituted the only exception. Those in the Superintendent Registrar's office (11,257) also increased; and they formed rather more than a third of the whole number (32,786) not celebrated in the Established Church. Roman Catholic marriages (7,800) formed part of the remainder. Seventy-five were performed at Quakers' meetings.

Of the 137,370 marriages in Church, 108,685 were performed after publication of banns, 20,742 by licence, 4243 upon Superintendent Registrar's certificate, 14 by special licence. But this statement is given as indicating proportions, not as a representation of the exact numbers, for in 3686 cases the clergy omitted to state whether the marriages were by licence or banns. The instances, however, in which this neglect occurs, exhibit a decided annual decrease.

The proportion of marriages by banns to those by licence was 5·24 to one. Wheat was at an average price of 53s. 3d., which may be termed "intermediate." By comparing groups of years, distinguished as dear, cheap, and moderate, it will be seen that those when moderate prices ruled were most favourable in the general opinion of the unmarried for laying the foundation of domestic establishments. The year 1860 helped to confirm that result. If *licence* and *banns* be taken as the respective badges of capital and labour, it may be shown that in years of middle and low prices marriage was most frequent in the working classes; in years of high prices it was most frequent in the middle and upper classes; but in the "intermediate" priced year of 1860 the marriage-rate was remarkably well maintained amongst rich and poor alike.

Of the bachelors who married, 139,440 chose spinsters, and of the widowers who married, 8260 selected widows. The bachelors who married widows were not quite so many as the widowers who got widows; but it happened singularly enough, that the widowers who married spinsters were exactly equal to both. In other words, the whole number of widows who renewed the nuptial vow was 15,358; and the number of spinsters who married widowers was 15,358. All these proportions are kept with much uniformity year after year.

TABLE V.—MARRIAGES. The Proportion per Cent. of *Minors* of each Sex, of *Males* and *Females* who signed the *Register with Marks*, and of *Persons* who were *Widowers* or *Widows*.

* The proportion of Widowers and Widows in the Year 1841 is for the September and December quarters only.

Re-marriages.—The number of widowers who entered into wedlock was to that of widows nearly as 8 to 5. Among persons who married, the proportion of those who did not marry for the first time was 11 per cent.

TABLE VI.—ENGLAND. MARRIAGES.—PROPORTIONAL Number of MARRIAGES in the several Counties of England during the Year 1860; of Persons who signed their Names; of Persons not of full Age; and of the Re-marriages of Widowers and Widows.

42	Monmouthshire - - -	846	86.5	48.9	4.44	21.53	11.88	7.1
43	South Wales - - -	709	64.4	43.1	5.77	15.94	12.47	7.1
44	North Wales - - -	670	61.1	46.1	4.65	11.23	14.80	7.1

The Table may be read thus by omitting the decimal points:—In England, among every 100,000 persons living 855 marriages took place; of 1,000 men married 745, of 1,000 women 638, signed the marriage register by writing their names; of 10,000 men married 635 were not of full age, of 10,000 women married 1935 not of full age; of 10,000 men married 138 were widowers, of the same number of women married 90 widows.

Minors.—Of persons under 21 years of age who married in the year there were 10,797 males, 32,927 females. The proportion of minors to the total number of those who contracted marriage was 13 per cent. The number of women under age was more than three times as great as that of men.

Signatures of Persons marrying.—43,401 men and 61,677 women signed the marriage registers with marks. The ability to practise the art of penmanship to the extent of writing one's own name, and probably sufficient skill to carry the art beyond that limit, is more common now than it was in 1853, when about 50,000 men and 72,000 women signed with marks. This happened only seven years before 1860, and when those who married were fewer than they were in that year.

It must be gratifying to observe, that education, even though it be no more than the elementary, mechanical part of it, has made steady progress among the people during the last twenty years. The test of the marriage signature is the more unexceptionable, because it is not extracted directly for the purpose of proving proficiency and obtaining a reward, and because it shows that the art had been sufficiently acquired to remain with its possessor for years after school had been left, though it may have been that with hard labour on the farm or in the workshop opportunities were scanty for the practice of it. Nor is the ability to write one's own name contemptible as a measure of education; it is only small when compared with the greatness of human attainments. If a man can write his own name, it may be presumed that he can read it when *written* by another; still more that he will recognise that and other familiar words when he sees them in print; and it is even probable he will spell his way through a paragraph in a newspaper.

In 1841 and some subsequent years, the proportion of men who signed with marks was 33 to a hundred married. In 1847-52 it was 31; since 1852 it has fallen to 26. Within twenty years the proportion among women has fallen from 49 to 36. The progress in writing is constant; and any slight fluctuations which the tables show would naturally arise in consequence of the annual marriages having been comparatively more or less numerous in rural or town districts, where education is less or more advanced.

showed a remarkably steady increase. The labouring population, when they are comparatively fresh from school, will discover a greater aptitude for writing than when their finger-joints have been stiffened by long and laborious manual operations, a fact which would affect, though to a small extent only, the educational results as shown in the Tables.

Seasons.—Marriages follow the following order of the seasons by a rule which in England apparently admits of no deviation; they are least frequent in the March, i.e., the first quarter of the year; they are more numerous in the third quarter than in the first; they are still more numerous in the second; and they reach their quarterly maximum in the last quarter. In 1860 the annual rates for the first, third, second, and fourth quarters were nearly the following: to a thousand of the population 7, 8, 9, and 10 marriages.

Registered Buildings.—There were 4403 buildings registered for the solemnization of marriages, and on the register on 31st December 1860. Of these, 132 belonged to Scottish Presbyterians, 1453 to Independents, 976 to Baptists, 10 to Moravians, 540 to Roman Catholics, 152 to Unitarians, 834 to seven different bodies of Wesleyan Methodists, 179 to Calvinistic Methodists, 127 to Swedenborgians, Irvingites, &c. In Wales, where there are 577, the registered buildings are far more numerous than in any other portion of the country with an equal population. The Calvinistic Methodists appear to be the most flourishing body of dissenters in North Wales, for they have there 86 out of 200 registered chapels. They are numerous also in South Wales, where, however, Independents and Baptists much preponderate over any other dissenting community.

The largest number of registered buildings belonging to Scottish Presbyterians is in Northumberland, Durham, and Lancashire. There are in London only 14, which must be considered few in relation to the great number of Scottish families resident in London, and for a people who are well-marked in their national character, and known to be attached to their institutions. Undoubtedly many Scotchmen have connected themselves with the Established Church; and more, perhaps, with communities of English Dissenters. The fact seems to prove that a people may be led, when they cannot be driven, to accept religious ministrations according to forms different from their own; and that the Scotch have found in the greater fluency and directness of English preaching a sufficient compensation for the want of those doctrinal expositions in theology which they had been accustomed to in their native country.

BIRTHS.

In 1860 the number of male children born was 349,799; of female children born 334,249. The total number of births was 684,048. In the previous year the total number was 689,881. There was a decrease on 1859 amounting to 5833. The birth-rate of the year was 3·437; that of the previous year 3·504. Both were above the average of 10 years, which is 3·417. In Staffordshire and Durham the birth-rate of the year rose above 4 per cent. In those counties it will probably be found that good wages obtainable by young persons create an inducement to the formation of early marriages.

Sex.—The excess of boys over girls born was 15,550. For each hundred of the latter there were 104·7 of the former. The proportion may be stated as that of 22 and 21. In the South Midland Counties the proportion of male births was generally very high. Thus, in Hertfordshire it was 107 to 100 female births; in Northamptonshire nearly 108; in Oxfordshire 110. But in Cambridgeshire it was less than 103. It was high in Shropshire. In Rutlandshire and Cumberland fewer boys were born than girls, these two counties presenting the only exceptions to the rule, which asserts the preponderance of male births. But the inequalities of one year will be redressed the next, and the relative proportion

of births, as distinguished by sex, will probably be found, in a series of years, to be perhaps nearly the same in a district as it is in England. In Rutlandshire the proportion of boys born to a hundred girls, in 1859, was 111·3; in 1860 it was 99·5.

Seasons.—The annual birth-rate fell from 3·7 in the first quarter to 3·2 in the last. It continued to fall through the four seasons; which, however, does not hold as a general rule. The rule is that births are more numerous in the first half of the year than in the second.

and out of wedlock.—Of children born out of wedlock, 22,159
 ys, 21,534 were girls; the total number was 43,693. Illegitimate
 were 6·4 per cent. of the whole number born. In Cumberland,
 he proportion rose to its maximum, it was double that amount;
 1 per cent.; in Norfolk it was 10·7; in Westmorland 10·6; in
 ire 9·6; in Nottinghamshire 9·1. It was also high in Bedford-
 Suffolk, Herefordshire, Lincolnshire, and the North Riding of
 ire. The proportion of children born out of wedlock in London
 r cent. in the Tables) is very probably understated. There is
 reater facility for the suppression of facts in large cities than in

smaller towns and villages. But the proportion was about as low in the extra-metropolitan parts of Surrey and Middlesex; in Huntingdonshire and Monmouthshire.

DEATHS.

There were 422,721 deaths, of which 215,238 were those of males, 207,483 those of females. The rate of mortality was 2·124 per cent., whilst the average annual rate of ten years, 1851–60, was 2·224. In that series of years, 1856, in which the rate fell to 2·051, furnishes the only instance in which the mortality was as low as in 1860. The death-rate in London was 2·249 in 1860; the average was 2·377.

From a comparison of the rates of mortality in different counties, it appears that the highest degree of health in the year was attained in the extra-metropolitan portion of Surrey, where less than 18 persons in a thousand living died. No other county, each being taken as a whole, presented so favourable a result. In the healthier year of 1856 the same rate of England was equally, but not more healthy. In that year the healthiest county in England was Westmorland, where the death-rate was below 16 to a thousand; but in 1860 Westmorland was not so fortunate as many other counties, for in it the rate was nearly 20, though the average does not much exceed 18. It was in the Spring (or second) quarter that the health of that northern county was in an unfavourable state.

Seasons.—The rate of mortality in 1860 was comparatively low, but this fact was due to the unusual salubrity of the summer, or third quarter. The rate fell in that season to 1·718 per cent. for England, which is lower than that of any of the twenty-two preceding summers. The healthy year of 1856 had not a very healthy summer, for the death-rate was then nearly 1·9, the average being about 2.

The meteorology of the summer of 1860 has been already described in general terms. Many details connected with the public health in the different seasons of that year, as it appeared to be affected by temperature, air, sanitary condition, &c., will be found in the following summary of the Quarterly Returns.

SUMMARY OF THE QUARTERLY REPORTS, 1860.

First Quarter—January, February, March, 1860.

The first quarterly return of the year 1860 presents nearly average results. The marriages were not quite so numerous as they were in the same quarter of 1859, but exceeded those of any corresponding period in the 11 years 1848–58; the marriage-rate, namely, the proportion of

Average of 23 years, 1838–60	2·320	2·145	103	108

This Table may be read thus:—In the year 1838 to every 100 males living there were 2·835 deaths of males; to every 100 females living there were 2·133 deaths of females; and to every 100 females who died there were 105 males. The last column shows the relative mortality of males and females; and that out of equal numbers living the deaths of males were 100 to every 100 deaths of females in 1838.

persons married to the then existing population, was also slightly above the average for the quarter. The birth-rate was above the average of the ten preceding winter quarters. The death-rate was slightly above the winter average, but below the rates of the two previous winters. The weather in the beginning of January was warm, but remained so cold and ungenial afterwards as to retard vegetation and to swell the return of deaths. The prosperity of trade and the sanitary improvements of towns produced a countervailing effect.

Marriages.—In the first three months of 1860 the total number of men and women who married was 70,300, being a great decrease on the 100,992 married in the preceding Christmas quarter. The difference, it may be re-assuring to know, is not the result of sudden depression in trade or other calamity, but of laws of habit and convenience, by virtue of which the closing months of the year are most, and the opening months least, preferred for the accomplishment of nuptial vows. The annual marriage-rate for January, February, and March was 1·422 per cent., whilst the average rate for the same period is 1·416.

The Table may be read thus, without reference to the decimal points:—In the March quarter of the year 1858, to 169,000 of the population of England there were 5,083 births, and 2,615 deaths registered. The three months January, February, March, contain 90, in Leap year 91 days; the three months April, May, June, 91 days; each of the two last quarters of the year 92 days. For this inequality a correction has been made in the calculations.

The marriage-rate for the quarter was as high as 1.556 in 1853, and as low as 1.252 in 1858.

Births.—The births of 183,180 children were registered in the quarter that ended on March 31st; or 7648 in excess of the numbers registered in the corresponding quarter of the previous year. The birth-rate of the quarter was 3.707; or 0.152 in excess of the average rate.

Increase of Population.—The births registered in the 91 days of the quarter exceeded the deaths by 60,563. So the natural recorded increase of the population of England and Wales was at the rate of 666 daily; the probable increase of the population of the United Kingdom was at the rate of 999 daily. 20,784 emigrants, including 917 foreigners, sailed from the ports of the United Kingdom during the quarter; 5954 were of English origin, and went to the United States and the Australian Colonies in nearly equal numbers; only 9 went in this cold season direct to the North American colonies.

Prices, the Weather, and Pauperism.—The births, deaths, and marriages of the population are influenced by the weather, the prices of food, and the activity of trade.

The average price of wheat was 44s. 5d. a quarter, while in the corresponding quarters of the two previous years it was respectively 46s. 5d. and 40s. 8d. There has been little fluctuation in the price. Beef was sold on an average at 5½d. a pound by the carcase at Leadenhall and Newgate Markets; the average of the highest prices of the best beef having been 6½d., of the lowest prices 3½d. The price of the inferior beef was 1d. a pound lower than it was in the winter of the preceding year; so the price fell 21 per cent. The superior beef only fell from 6½d. to 6¼d. The average price of mutton was 5½d. a pound; the price of inferior mutton was 4½d., the superior mutton was 6½d. a pound. The price of the inferior mutton was the same as it was last year; the price of the best mutton was a farthing lower. The York Regent potatoes sold on an average at 130s. a ton at the waterside market, Southwark; so the price though lower than it was in the winter quarter of 1858 was 44 per cent. higher than the average price (90s.) of last year.

The mean temperature of the three months was 38.8°; February, being the coldest month, 35.7°; and March, 41.1°, little warmer on the average than January, 39.7°. The characteristics of the season were: warmth on New Year's Day (16° above the average temperature), and in the following days until January 25th, when cold weather set in and continued to the end of the quarter; the frequent and great changes of the atmospheric pressure; and an almost continuous succession of gales of wind.

Mr. Glaisher has described the meteorology of the quarter in detail.

Pauperism is declining.

State of the Public Health.—122,617 deaths were registered in the winter quarter. The rate of mortality for the quarter was 2.481 per cent., or slightly above the average of the season (2.460); which in the absence of epidemics is always the most fatal in England.

The rate of mortality in the chief town districts was 2.636; in the small town and country districts 2.338 per cent. The latter rate is above, the former below, the average of those districts respectively.

The deaths in the quarter, at the rates actually prevailing in the healthier districts of the country, would have amounted to 88,372; the actual deaths amounted to 122,617. Consequently the deaths from causes induced by the unfavourable sanitary condition in which large numbers of the people live amount to 34,245.

The mortality of LONDON was above the average; it is described in the Weekly Tables.

9985 persons died in the SOUTH-EASTERN COUNTIES; in Surrey and London the quarterly mortality was above the average of the two preceding years; in Kent and Sussex below the average. In Portsmouth the deaths and deaths were increased by the accessions to Her Majesty's dockyard.

The population of Southampton is in a comparatively healthy state. Small-pox was prevalent in the Abingdon district; the Registrar printed notices at his own expense, and affixed them on the church doors. Some parents were stubborn, others were negligent; and their children consequently suffered or died of small-pox.

The deaths in the SOUTH-MIDLAND DIVISION were below the average. 17 cases of fever occurred in Sunbury, Staines; and apparently owed their origin to bad sanitary arrangements. 71 deaths happened in the Colney Hatch Lunatic Asylum. The enforcement of sanitary regulations is imperatively needed in the Toddington sub-district, where 44 deaths were registered. In Caxton 4 deaths from diphtheria, 3 in one family, were recorded. About the fens of Cambridge ague and typhoid fever prevailed.

10,064 children were born and 2972 persons married in the EASTERN COUNTIES; 6579 deaths were registered, and the mortality was much lower than it was in the winter of 1858, but higher than it was in the preceding winter. The births in Colchester, which is a garrison town, are unusually numerous; the deaths are below the average, but influenza and whooping-cough have prevailed. The cold winds have undoubtedly been severely felt in Norfolk and Suffolk; but the considerable amount of sickness has not greatly raised the mortality. In Stalham and Fincham, however, the deaths exceeded the births; 16 persons died of diphtheria in Stalham, 8 in Fincham.

10,850 persons died in the SOUTH-WESTERN COUNTIES; where 15,904 children were born and 6430 persons married. The mortality rate was lower than in the two previous years. Poole in Dorsetshire has been in an unhealthy state; influenza apparently prevailed there with some intensity, and proved fatal to children and old people. The deaths (83) nearly equalled the births (88); the deaths in the whole district were 109. Small-pox and measles prevailed in South Devon. In Exmouth the Registrar says:—"The deaths are one fourth above the average. 12 were from small-pox; but only one after vaccination, and in this case the variolous eruption appeared seven days after the operation. Vaccination has been attended with the most beneficial effects, and has arrested the progress of the disease. I believe there is scarcely a case remaining in this district." Vaccination in this case was performed while the small-pox matter was developing itself in the system; hence it was not a case of small-pox after protection by vaccination had been effected. Such cases are ignorantly cited as instances of small-pox after vaccination. Vaccination is much neglected and small-pox has been fatal in Plymouth. Small-pox, whooping-cough, and measles have raised the deaths in Bideford (16) above the average. A great number of illegitimate children are sometimes born in a small sub-district at the same time; thus, in Lyme 6 of 27 children were born out of wedlock in the last quarter.

Disease is propagated in parts of Cornwall by defective sanitary arrangements. Thus diphtheria has been fatal in Kea. The Registrar of Callington makes the following observation:—"This district is at this time rather unhealthy. During the quarter I have registered 8 deaths from typhus (probably typhoid), 2 of which, those of mother and child, were in one house, and now the father and three other children are ill. The medical officer in his report to the board of guardians, dated 28th March, says that "these children absolutely require removal from the wretched hot-bed of fever in which they now lie; they require careful and constant nursing, cleanliness, ventilation, beef-tea and libitum, port wine, and various other articles." Again at Camborne 6 deaths occurred from scarlatina, 2 from diphtheria, 8 from fever; the latter occurring in parts of the town where drainage and sewerage are much neglected.

In the WEST MIDLAND COUNTIES the marriages and births were above, the deaths below, the average numbers. 8026 persons married; 23,833

children were born; 14,909 persons died. The health of the large towns of this division is evidently improving; the fatality of disease is less than it was in Bristol and Clifton, where the deaths during the three last winters were 1194, 979, 876; in Birmingham and Aston 2046, 1923, 1740. If the municipal authorities succeed in supplying all the towns with pure water, and removing all the disinfected nightsoil and refuse to the fields, they will witness still further diminutions in the heavy death-rate which is now levied on the inhabitants.

South Staffordshire contains a great number of enterprising men who are doing much valuable work; they extract coal or iron, and manufacture hardware; but their attention has not hitherto been seriously directed to the preservation of the health of the people, who suffer from all kinds of pestilential diseases, and are in a deplorable sanitary state. In the district of Wolverhampton alone, for example, 980 deaths occurred in 91 days; the mortality was high before, and while Birmingham is getting better, the health of the district of Wolverhampton is every year getting worse. Several hundreds of the inhabitants are every year disabled by sickness; funerals are a staple trade; parents lose their children, wives their husbands, and children their fathers, by the poison of the place; workmen and people in trade are cut down at all ages in alarming numbers. Mechanism and chemical knowledge and capital abound in the Wolverhampton district; why should they not be applied to render the sanitary arrangements perfect? The deaths are below the average in Wednesbury, and this the Registrar attributes to improvements which the Local Board of Health has effected in "supplying the town with pure water, attending to the sewerage, and compelling people, as far as possible, to cultivate habits of cleanliness." This is satisfactory.

The marriages and births increased, the deaths decreased in the NORTH MIDLAND COUNTIES, where 3942 persons married, 11,875 children were born, and 7540 deaths were registered. Fever and diphtheria have proved fatal in some districts. Thus typhus prevailed in three villages of Oakham; it was apparently the result of overcrowded sleeping rooms and want of ventilation. Diphtheria, scarlatina, and typhus, were fatal in several villages of Spilsby; diphtheria killed 13 young persons under 26 years of age in North Kelsey. The Registrar of East Retford comments justly on the severity of the weather, to which he ascribes "the fearful mortality" throughout the whole of his district. The Registrar of St. Ann, Nottingham, on the other hand, records 224 births and only 127 deaths. "The deaths," he says, "are below the average of corresponding quarters;" adding, "the sanitary arrangements are excellent and carefully carried out, to which cause, no doubt, the decrease in the mortality may in some measure be attributed." It is evident that the severity of the season must have been felt all over the kingdom; yet notwithstanding the effects of the weather, the mortality decreased wherever sanitary arrangements were sedulously worked. Even careful observers, sometimes, it may be remarked, refer the excessive mortality of their districts to the weather, or to some other causes over which people have little or no control. They do not bear in mind that foul air is more fatal than cold air, and that food and clothing and active employment keep out the cold.

The marriages as well as births increased, the rate of mortality decreased in LANCASHIRE and YORKSHIRE. 11,048 persons married, 23,195 births, and 16,024 deaths, were registered in Lancashire; 8033 persons married, 19,148 births, and 12,610 deaths, were registered in Yorkshire. The mortality fell in Liverpool and Manchester. The decrease of the mortality is ascribed to the rise of wages, the active employment of the people in the factories, and to the sanitary improvements, which are so imperatively required in these two great counties.

In the NORTHERN COUNTIES 4114 persons married; 10,879 births, and 6683 deaths were registered. The deaths are rather more numerous than

they were last year ; but the mortality is lower. Small-pox, diphtheria, scarlatina, and fever prevailed in some districts, especially those which are left in a dirty state.

In MONMOUTHSHIRE and WALES 4366 persons married ; 11,776 births, and 8190 deaths, were registered. The mortality was below the average of Wales.

Second Quarter—April, May, June, 1860.

The leading facts in the Return may be stated thus :—the marriages were increasing ; the births were fewer than in the same quarter of 1859, and were also fewer than they would have been if the average spring birth rate had been maintained ; the deaths exhibit in no faint characters the effects of an ungenial season, and the rate of mortality was higher, with only two exceptions, than in any corresponding quarter of the previous ten years. The general aspect of the Return is not satisfactory.

Marriages.—87,554 persons married in the quarter ; and the rate of marriage was 1·766, exceeding the average by ·051. The marriages rose from 39,890 in the spring quarter of 1858 to 43,777 in the corresponding quarter of the present year. From this fact it may be inferred that the prospects of the working classes have been growing brighter, and that their real condition has improved. The increase of marriages has been greatest in Cheshire and Lancashire, in London, and generally in the manufacturing districts ; but an increase is observable in every division except the Eastern Counties.

Births.—The number of boys and girls born in the quarter was 174,028, the number in the previous quarter that ended March 31st having been 183,180. On an average of years as many children are born in the spring quarter as in the winter, but in the present year there was, as these figures show, a decrease that is not unimportant.

The births in the quarter were to the population in the annual proportion of 3·512 per cent., whilst the average rate is 3·559. It may be added, that the birth-rate was lower than in any spring quarter of the previous ten years, except those of 1852, 1853, and 1858, and in each of those periods the mortality was above the average, as was also the mortality of the antecedent winter quarters.

Increase of Population.—In the 91 days of the quarter the births exceeded the deaths by 63,159. This excess represents the natural increase of the population in that period ; the increase, aided by ingress from Scotland, Ireland, and more distant parts, is more considerable.

The emigration of the last quarter consisted of 48,626 persons, who sailed from ports in the United Kingdom at which there are Government emigration officers. By distributing 8260, who are not distinguished as regards the country of their birth, proportionally over the rest who are thus distinguished, it appears that 9437 were English, 3461 Scotch, 33,438 Irish, and 2290 were foreigners. The United States were the destination of three fourths of the whole number. Of the English emigrants 5945 chose the United States, 2792 the Australian Colonies. Although in the emigration to America the Irish were five times as numerous as the English, a considerably less number of the former, as compared with the latter went to Australia ; whilst as regards persons of Scotch origin, it is remarkable that nearly as many went to the North American Colonies as to the United States, and more than twice as many went to Australia as to either of those parts of America. National character is in part the cause of these differences ; but they are chiefly to be referred to the better or worse condition in life of the emigrants.

Prices, the Weather, and Pauperism.—Wheat has risen in price ; the average in the three months ending June 30th, was 52s. 8d. per quarter. In the same period of last year it was 47s. 3d., and in that of 1858 it was 44s. 1d. The dearthness both of bread and meat has been sensibly

felt by the labouring class. The average price of beef was $5\frac{3}{4}d.$ per lb., that of mutton $6\frac{1}{4}d.$ as sold in the carcase at Leadenhall and Newgate Markets. Taking for review the nine quarterly periods that have passed since March 1858, beef has lately risen above previous prices, that of the early part of last year being excepted; and mutton has ranged still higher. The average price of superior mutton was last quarter $7\frac{1}{4}d.$, higher by three farthings than in the previous nine months; that of superior beef was $6\frac{3}{4}d.$, and showed a less increase. Inferior beef was a penny dearer than it had been in the beginning of the year. The prices of both qualities of beef and mutton were higher than in the June quarters of 1858-9, except that of inferior beef ($4\frac{3}{4}d.$), which was the same as respects the two June quarters of 1859-60. York Regent potatoes sold at the waterside market, Southwark, at an average price of $142s. 6d.$ per ton: they were not so dear as in the same quarter of 1858 ($162s. 6d.$), but much dearer than in that of last year ($97s. 6d.$).

The numbers of paupers, both in-door and out-door, were less last quarter than they were in the same period of 1859; but the decrease was inconsiderable. A decrease more important is observed when they are compared with those of 1858.

The temperature of the air, barometrical pressure, rain and other elements of the weather, which has been of unusual character, are minutely and skilfully described by Mr. Glaisher. He states that both days and nights in April were remarkably cold; those in May were both somewhat warmer than usual; in June both were cold, particularly the high day-temperatures, which were lower than in May though usually they are higher by seven degrees. April was colder than it had been previously in any year since 1839; and we must travel back to 1821 to find so cold a June. June was colder than May at Guernsey, in Cornwall and Devonshire, and near the sea, south of latitude 53° . The mean temperature of the quarter at Greenwich was $50^{\circ} 5'$, which is less by $2^{\circ} 3'$ than the average of the same quarter in 19 years. At Greenwich the rain-fall in June was $5^{\circ} 8$ in.; as far back as 1815 there is no instance of so large a fall in June. This fall was, however, greatly exceeded at stations south of Greenwich, particularly in Hampshire.

State of the Public Health.—The deaths registered in the three months that ended June 30th were 110,869; a larger number than was returned in any previous June quarter (1848-59). The extent to which life was invaded and destroyed by causes that have been described, badness of weather and dearth of food, can be only partially discovered by comparing the mortality with an average derived from seasons both healthy and unhealthy; but it may be stated that the annual rate of mortality last quarter was 2.237 per cent. of the population, while the average of ten previous springs was 2.195 . In other words, the mortality was such that if it had been maintained for a year, out of a hundred thousand persons 42 would have died in excess of the number to whom a season that could not be represented as healthy, but only of average character, would have been fatal.

If the mortality had been at the rate of 17 in a thousand annually, which is ascertained to be the rule of selected healthy districts, instead of the actual rate (22), the deaths in the whole of England and Wales last quarter would have been 84,927; and 25,942 persons would, when the period had closed, still have formed as many units in the sum of human existence. An excess of deaths which is not decreed by inexorable fate may very properly be termed "unnatural," though it is quite true that, only the conditions being different, it is nature that *killeth* as well as *giveth life*.

It is a remarkable and interesting fact that if two millions of acres on which the chief towns of England are situated, be distinguished from the remaining thirty-five that hold small towns and country parishes, it is found that the rate of mortality on the former (2.328 per cent. per

annum) was *below* the average of last quarter, whereas on the latter the rate, 2·154, was *above* the average. The average rates were respectively 2·373 and 2·041. Although the time may be distant when cities will be as healthful as rural districts, or the inferiority which our English poet ascribed to "the town" as the handiwork of man become much less apparent in point of salubrity than it is at present, it cannot be questioned that large populations have even now advantages of a nature favourable to health which villages do not possess. The highest attainable health is probably to be sought in a happy combination of both states—*rus in urbe*. The words of an excellent popular writer may prove to be no dream, but a well-founded expectation; he believes that we shall ultimately obtain "a complete interpenetration of city and country, a complete fusion of their different modes of life, and a combination of the advantages of both, such as no country in the world has ever seen."* But it may be asked, whether it is forbidden by this last expression to accept as a perfect model even Nebuchadnezzar's Babylon, which the distinguished writer himself has extolled.

In LONDON 14,932 persons died in the quarter. The metropolis lost about a thousand more lives than in the healthier spring of 1859. Pulmonary complaints were very fatal. The mortality from zymotic diseases generally was comparatively low; in this class measles chiefly prevailed.

The SOUTH-EASTERN Counties returned 9214 deaths, against 8830 and 8468 in the springs of 1858–59. The parish of Barming in the Maidstone district suffered from angina maligna; Worth in Sussex from diphtheria, which also attacked Newport in the Isle of Wight. Scarletina was fatal in Southampton; and the Registrar of Landport, Portsea Island, states that the "long winter and cold spring" had produced a high mortality in his district.

In the SOUTH MIDLAND COUNTIES the mortality was high, except in Huntingdonshire. Typhus was imported from Luton into Wheathampstead (St. Albans) and six deaths from it occurred within a distance of 100 yards. Cesspools and pigsties, till then undisturbed, were at length abolished to stay the infection. Northampton suffered severely from small-pox, which was fatal in 34 cases in St. Giles, and in 25 in All Saints. Ague was very prevalent at Sutton in Cambridgeshire.

The EASTERN COUNTIES show an increase in the deaths, which number 6226. The medical attendant of a lady who died at Colchester from erysipelas considers that bad sewerage was the cause of the death: "The public sewers in the neighbourhood were so defective in trapping, that the house [where she lived] was poisoned with the stench." The Registrar of Radwinter mentions that the parish of Hempstead has generally more deaths from fever than all the rest of his district; and he complains of the indecent overcrowding of cottages. It is stated that ague has probably never been so prevalent at Wenhasston (Blything) as in last quarter; it was caused by the miasma from saturated marsh lands near the sea. Able-bodied men were the class most subject to it. In Norfolk diphtheria has prevailed at Holt, South Walsham, and Wells; small-pox at King's Lynn, where it has been fatal to the unvaccinated.

The deaths rose above 10,000 in the SOUTH-WESTERN COUNTIES; they were nearly 900 more than in two corresponding quarters. They were numerous in Wiltshire, Devonshire, and Cornwall. In Chippenham, where measles has been very prevalent, the total deaths rose from about 100 to 133. The same complaint was fatal at Lympston and Bideford in Devonshire, also at Saltash in Cornwall; and its fatality was believed to be owing to the cold wet season. Scarletina was prevalent and fatal in Corfe Castle sub-district, and Camborne. "The unusual severity of the "weather" caused 25 deaths by whooping-cough, out of 82, at St. Agnes, Truro. Plymouth suffered much from small-pox.

* Charles Kingsley's *Miscellanies*: Great Cities.

THE WEST MIDLAND COUNTIES appear to have been on the whole healthy, but the mortality was high in certain localities. In Gloucester district, where the total deaths rose from about 165 to 253, measles was very fatal; it also "prevailed to an alarming extent" at Newhall (Burton-upon-Trent), where the want of sanitary arrangements is reported as the chief cause of increased mortality in the parish. Scarletina attacked Whitchurch and Market Drayton in Shropshire, and was fatal in many cases. Four children died from diphtheria at Yarkhill in Herefordshire.

THE NORTH MIDLAND COUNTIES were not unhealthy, except Lincolnshire, in many parts of which measles prevailed fatally; and at Godney Hill there was ague. Hayfield in Derbyshire returned 12 deaths from diphtheria. The returns from Cheshire and Lancashire (NORTH WESTERN) were not in the aggregate heavy; but measles, so common in other parts, visited Heaton Norris, Macclesfield, Liverpool, West Derby, Manchester, Salford, and Preston; 17 deaths from small-pox at West Leigh. The mortality rose a little in YORKSHIRE. Ripponden (Halifax) suffered greatly from scarlatina. Many children died from measles in Leeds. Diphtheria caused numerous deaths at Campsall, Aberford, Richmond, and in the ill-drained village of Borrowby at Northallerton. Bad drainage and impure water caused an outbreak of typhus in East Cowton (Northallerton). Mention has been made by the Registrar more than once of the bad sewerage at Sherburn, a few miles from Scarborough. In the NORTHERN COUNTIES at Little Chilton (Stockton) marshy ground bred much ague of a virulent character. Southwick village (Sunderland) is described as in "most dreadful" sanitary condition. In WALES, out of 46 deaths in Kenarth, 14 were from diphtheria, which was also very fatal at Llanarmon.

Third Quarter.—July, August, September, 1860.

The temperature during the quarter was unusually low, the sky cloudy, the earth often sunless, and the weather generally bad, in the language of meteorology; nevertheless, the progress of the phenomena which the returns record is satisfactory. The mortality was much below the average, the births little differed from it; the marriages became more frequent. Sanitary improvements have gone on, and the general result of the wet weather has been a better supply of water, the purification of the sewers, and the retardation of putrefaction, as well as of the zymotic changes which produce diarrhœa. Fruit has been comparatively abundant, and its consumption has also had a salutary effect. Mr. Leigh, of Manchester, justly says, "the dependence of diarrhœa upon a high temperature seems to be most marked, for fruit has been unusually plentiful, and it has been eaten most freely without ill effect."

The ultimate results of the extraordinary season will be watched with interest as they are revealed in future returns.

Marriages.—81,082 persons married in the quarter; and the marriage-rate was 1·614, or higher than in any corresponding quarter since 1856, but slightly below the average of ten summer quarters.

The increase of marriages was most striking in London and in Lancashire.

Births.—164,121 children were born and registered in the ninety-two days of July, August, and September. The number is less than the number in the last year, but exceeds largely the numbers registered in the corresponding summer quarters of any previous year. The increase of births is most considerable in London, Lancashire, Cheshire, and Yorkshire. The birth-rate of the quarter was 3·267; the average of the season being 3·280.

Increase of Population.—The excess of births over the deaths in the quarter was 77,809; so the natural increase of the population of England

and Wales was at the rate of 846 daily ; and if the rest of the population increased equally fast the natural increase of the United Kingdom must have been at the rate of 1266 daily. The increase exceeds any on record.

About 10,874 emigrants of English origin sailed from the ports of the United Kingdom at which there are Government emigration agents; 5134 to the United States, 336 to the North American colonies, 4115 to the Australian colonies, and 1289 to other parts. 33,734 emigrants sailed from these ports, of whom about 1433 were of foreign origin. Half of the Scotch and only about one eighth of the Irish go to the Australian colonies.

Prices, the Weather, and Pauperism.—The prices of provisions have been high during the thirteen weeks. Taking the corresponding weeks of 1859 as the starting point, the price of wheat rose 34 per cent., beef 7 per cent., mutton 11 per cent., potatoes 59 per cent. The average prices during the thirteen weeks were: wheat 59s. 1d. a quarter, beef 5½d., mutton 6¾d. a pound by the carcase in the Leadenhall and Newgate markets; York Regent potatoes 135s. a ton at Waterside Market, Southwark. The prices of the lower qualities of beef were stationary (4½d.), and the prices of the higher qualities rose from 6½d. to 7d. a pound. The prices of the lower and higher qualities of mutton rose ½d. and ¾d. in the pound in the twelvemonth, and were respectively 5½d. and 7½d. a pound during the thirteen weeks.

The mean temperature of the thirteen weeks at Greenwich was 56°·2; which is less by 3°·3 than the mean temperature of the corresponding seasons of 89 preceding years. The temperatures of July, August, and September were all below the average to nearly an equal extent. There is no other instance on record of so low a mean temperature of the four months June, July, August, and September as 55°·9. By going back to 1771 Mr. Glaisher, however, finds a mean temperature of 56°·0. The fall of rain in the three months was 9·6 inches, which is 2·1 inches in excess of the average. The fall of rain has been 25·1 inches at Greenwich during 9 months, and has varied at the several stations from 16·8 inches at Scarborough to 42·6 inches at Lampeter in Cardiganshire. The excess of rain at Greenwich in the nine months is 6·0 inches. Upon this subject and others Mr. Glaisher in his valuable report gives some interesting details; and among them may be mentioned the time at which the crops as well as some fruits ripened. According to his reports the potato disease is not so bad in the south as it is in the north of England.

Pauperism is declining; on an average 769,360 were in the receipt of relief, while the number in the corresponding weeks of the previous year was 783,449.

State of the Public Health.—86,312 deaths were registered in the three months ending in September, or less by 17,904 than the deaths (104,216) registered in the corresponding quarter of 1859. To every six deaths in the last there were only five in the present summer. The rate of mortality was 17; whereas the average of the season is 20 per 1000.

The reduction of the mortality is observable in the town and in the country districts; but it is by far the greatest in the town districts. The rate of mortality in the town districts fell from 23·77, which is the average of 10 summer quarters 1850–59, to 18·61 per 1000; in the country and small town districts from 17·51 to 15·84, or 5·16 degrees in the town and 1·67 in the country districts.

This is exceedingly gratifying; and if the supply of vegetables prove adequate through the year, it is not probable that the reaction will deprive the population of all its gains. The drainage of the banks of the Thames and of the other marshy districts of the country would secure the inhabitants from the attacks of neuralgia, rheumatism, ague, and fever which often follow rainy seasons.

In LONDON the mortality was low; the prevailing diseases have been described in the Quarterly Summary of the Weekly Tables.

The SOUTH EASTERN DIVISION has been healthy; the deaths much below the average in every county. 3 deaths from diphtheria were registered at Leatherhead, and Woking is said to have suffered exceptionally, but in Chobham, Ripley, and Kingston the deaths were much below the average. The deaths in St. Peter's, Brighton, were below the average, and the district has been unusually healthy. The sewers have been well flushed and cleansed by the constant rains. In Kent nearly every district was healthy; but in Ashford scarlatina prevailed; in Barham diphtheria. Portsmouth, generally an unhealthy place, has suffered less than usual; 400 persons died in the district. In Southampton the mortality has been low; none of the epidemic diarrhoea has appeared in Winchester.

5358 deaths were registered in the SOUTH MIDLAND COUNTIES, and in every county the mortality was below the average. In the parish of Knebworth, Hertfordshire, with a population of 200, however, 12 children died of diphtheria, and several are suffering from it now. Small-pox is still epidemic in Northamptonshire; Daventry and Peterborough are especially mentioned. Small-pox is also very prevalent in Newmarket.

The EASTERN COUNTIES have been healthy; the deaths, which were 6158 in the previous summer quarter, amounted only to 4563. Diphtheria caused 7 deaths in the South Walsham sub-district of Blofield, but is mentioned in no other district of Norfolk, Essex, or Suffolk. In Watton, Wayland, two families were attacked by typhoid fever, brought, the registrar asserts, from London; otherwise the district was healthy. The sanitary arrangements have been a great benefit to this district. Colchester is now healthy; and there has been no death from diarrhoea.

The SOUTH-WESTERN COUNTIES out of a population of nearly two millions lost 7050 by death; whereas the deaths in the previous summer quarter were 8515. Every county, Wilts, Dorset, Devon, Cornwall, Somerset, alike enjoyed this immunity. Out of a population of about six thousand in Wilton only one death occurred in thirty-two days. Small-pox has attacked several children in Summercourt, Newlyn, where vaccination has been very generally neglected. In Clutton, Somersetshire, the reduced mortality is referred to improved sanitary arrangements, better dwellings, more provident habits, and fuller employment in the coal mines and husbandry than is generally obtained in the neighbourhood. The deaths in Bath have fallen in three successive summer quarters from 400 to 370, and 286. In the Bridport district the deaths (75) were more numerous than they were in the previous summer (59); and as is evident from a local inquiry, the mortality of the town is so high as to admit of great reduction by sanitary arrangements; which the enlightened part of the inhabitants appear to be disposed to adopt.

The WEST MIDLAND COUNTIES generally experience a mortality above the average; but there are signs of improvement which cannot be entirely accounted for by the flooding of the sewers by the rains. The decrease in the mortality of Wolverhampton, Walsall, West Bromwich, and Dudley, where the water supply was imperfect, is enormous; and in nearly all of them certain sanitary arrangements have been introduced. The deaths in Birmingham and Aston during the last three summer quarters have been 1854, 1814, and 1243: the mortality has fallen one-third part.

It is probable that the ordinary water supply of a place is bad when its mortality is greatly reduced by heavy rains.

The NORTH MIDLAND COUNTIES lost less by 1045 lives in the last summer quarter (5421) than they lost in the summer preceding. Diphtheria has nevertheless prevailed in parts of Lincolnshire, the inhabitants of which will do well to study the experience of Fiskerton. There diphtheria was very prevalent, and killed 11 persons. The drainage of the parish was

very defective, "there being open dykes close to some of the houses containing water, &c. in a putrid and stinking state, without any fall to pass it away." It was reported to the Board of Guardians by the registrar, the defects of drainage were remedied, and there has been no fresh case during the last month. The district is healthy.

In Belper vaccination is much neglected; small-pox has made its appearance, and has been fatal in 9 cases. Fever has been very fatal in Dronfield.

In the NORTH WESTERN COUNTIES 13,954 deaths were registered, the deaths in the previous quarter having been 15,506. The system of *middens* prevails in Lancashire, and the dirt is there not washed away by rain as it is in sewers; which may account for the circumstance that the reduction of the mortality is less in this county than it is elsewhere. The registrars of the West Derby district, a part of which is in the borough of Liverpool, call attention to the diminished rate of mortality. "Sanitary measures," one of them says, "under the Health Act have greatly improved this district." Scarlatina has been very prevalent in the Lancaster sub-district; it was fatal in 15 cases, and had it not been for the superior sanitary arrangements the registrar believes "it would have been four times as fatal, for in an ill-drained group of twenty houses a quarter of a mile from the town the disease was the cause of 3 deaths."

The deaths in Yorkshire were 9797, or less by 1189 than the deaths in the summer quarter of the previous year. There is no reduction in the high mortality of the Leeds or of the Hunslet districts; indeed, diarrhoea prevailed there, and the deaths were 1481, or 170 more than in the summer quarter of the previous year. The causes of the high mortality deserve the careful attention of the intelligent authorities of that important town.

Hull and Sculcoates experienced a great reduction of mortality.

The deaths in the northern counties amounted to 5149, and were to some extent below the average number. Scarlatina and typhus have been prevalent in Durham and in Tynemouth.

The mortality in Monmouthshire and Wales was below the average; 101 deaths were registered.

The weather of this quarter may be looked at as an experiment on the health of the people. Employment has been easily obtained by workmen; the prices of provisions have been high. And this general survey tends to establish the fact, that the salubrity of the season is chiefly due to two circumstances; the reduced temperature of summer, and the abundant supply of water by rain. The low temperature retarded the refaction of the town impurities; and the water washed them away; both the forces acting in the same direction, gave a great result. A careful study of the circumstances of each locality by which the result produced, cannot fail to be instructive; and to confirm the faith of authorities in the simple sanitary elements with which nature works.

Wolverhampton is, as the Registrar conjectures, extraordinarily dry, "because the frequent rains have swilled away the impurities in which in hot summer weather noxious effluvia arise, thereby preventing the sickness, and diarrhoea more especially, caused by such miasms in the air, and impurities in the water supply," why should Wolverhampton ever be again as unhealthy and as dangerous to its inhabitants as it was before? It is true the town has no command over the river; but it has unquestionably the power to wash away the impurities in cesspools and its sewers. Its engineers can supply the town with water in abundance for the use of the inhabitants. If the Birmingham and Aston district too lose only 1243 inhabitants by death in a town is well washed, why should they ever die again at the rate of 1815 of the people perished?

The remedy is too simple to obtain immediately all the attention it deserves from the municipal authorities. But they cannot do better than imitate the great oriental dignitary suffering from leprosy, as our towns are now suffering from other diseases, who although he was wroth when told to "wash and be clean," yet finally obeyed the injunction, and was healed.

Fourth Quarter.—October, November, December, 1860.

The Quarterly Returns are favourable, and imply that the population was not only more prosperous but healthier than usual. The marriage rate was slightly above the average, so that the prospects of the working classes were in their own opinion good ; the births slightly decreased, and the mortality fell below the average. The improvement in health was greatest in the town districts.

The accounts of births and deaths for the *year 1860* show an increase of the birth and a decrease of the death rate.

Marriages.—101,376 persons married in the quarter; and this is the greatest number that have ever married before in the same season.

The quarterly marriage rate (per cent. per annum) was 2·012, the average being 2·001.

The same excess is observed in the marriages of the year 1860 ; for 340,312 persons married, and the marriage rate was 1·710, the average rate being 1·604.

The greatest increase of marriages is observed in the manufacturing districts of Yorkshire and Lancashire.

Births.—162,719 children were born and registered in the last quarter of the year 1860; or *more* by 4757 than were registered in the last

Names of the 125 Districts and 23 Sub-districts comprising the chief towns :—All the Districts of London (26), and Kingston, Richmond, Gravesend, Medway, East and West Maldstone Sub-districts, Canterbury, Thanet, Hastings, Brighton, Pease Island, Alverstone (Gosport), Southampton, Winebore Sub-district, Reading, Brentford, Edmonton, St. Clements Sub-district, Headington, Oxford, Northampton, Cambridge, West Ham, Colchester, Bury St. Edmunds, Ipswich, Yarmouth, Norwich, King's Lynn, Melkham, Salisbury, Exeter, Plymouth, East Stonehouse, Stoke Damerel (Devonport), Bristol, Bath, Badminton Sub-district, Bristol, Clifton, St. Nicholas Gloucester, and St. John the Baptist Gloucester Sub-districts, Cheltenham, Hereford City Sub-district, Shrewsbury, Wolstanton, Stoke-upon-Trent, Wolverhampton, Walsol, Wat Bromwich, Dudley, Stourbridge, Worcester, Birmingham, Aston, Coventry, Leicester, Lincoln Home Sub-district, Litchfield, Nottingham, Derby, Stockport, East Macclesfield, West Macclesfield, and Sutton Sub-districts, Chester Castle and Chester Cathedral Sub-districts (Great Boughton), Liverpool, West Derby, Wiran, Warrington, Leigh, Bolton, Bury, Barton-upon-Irwell, Chorlton, Salford, Manchester, Ashton, Oldham, Rochdale, Haslingden, Burnley, Blackburn, Preston, Todmorden, Huddersfield, Halifax, Bradford, Hunslet, Leeds, Dewsbury, Wakefield, Eccleall Bierlow, Sheffield, Rotherham, Micklegate, and Walmgate Sub-districts (York), Sculcoates, Hull, St. Oswald and St. Nicholas Sub-districts (Durham), Houghton-le-Spring, Sunderland, South Shields, Gateshead, Newcastle-upon-Tyne, Tynemouth, St. Catharine and St. Mary Sub-districts (Carlisle), Merthyr Tydfil, and Llanelgalech and Swansea Sub-districts (Swansea).

The three months January, February, March, contain 90, in leap year 91 days; the three months April, May, Jun. 91 days; each of the last two quarters of the year, 92 days. For this inequality a correction has been made in the almanack, also for the difference between 365 and 365²⁵ days, and 366 and 366²⁵ days in leap year.

quarter of 1858, and 7372 less than the number in the last quarter of 1859. The birth-rate of the quarter was 3·230; the average of the quarter being 3·234.

684,048 children were registered in the year 1860; and the annual birth-rate was 3·437, making ·020 above the annual average. Taking one day with another through the year, 1874 children were born daily.

Increase of Population.—The births exceeded the deaths in the quarter by 59,796, and that was the natural increase of the population.

TABLE XVIII.—The AVERAGE PRICES of CONSOLS, of WHEAT, of MEAT, and of POTATOES, in each of the Years, and in each Quarter of the Years 1852–1860; and also the AVERAGE NUMBER of PAUPERS RELIEVED on the last day of each Week, in each of the Years and in each Quarter of the Years 1857 to 1860.

In the year the *natural increase* of England and Wales was 261,327 souls; 716 daily. If Scotland and Ireland increased at the same rate the natural increase of the population of the United Kingdom must have been at the rate of 1069 daily.

Emigration carried off a part of the increase. In the quarter about 7074 English emigrants sailed from the ports at which there are Government Emigration Offices; nearly in equal proportions to the United States and the Australian colonies.

Prices, the Weather, and Pauperism.—The scarcity or the abundance of the principal articles of food is shown by their prices.

Wheat was 56s. 9d. a quarter; or 31 per cent. higher in price than it was in the corresponding quarter of 1859. Beef at the Leadenhall and Newgate markets was sold, by the carcass, at 4½d. a pound; or nearly ½d. less. Mutton was on an average 5½d. a pound, and remained the same as in the last months of 1859. The potato crop partially failed; and York Regents, at the waterside market, were sold at 122s. 6d. a ton; or at the rate of 1½ lb. for a penny. The price of this universal article

of food rose progressively in the last three months of the three years 1858–59–60 from 87s. 6d. to 102s. 6d. and 122s. 6d. a ton. To supply its deficiency other antiscorbutic vegetables, fruit, or herbs are required.

The meteorology of the season was peculiar, and is fully described by Mr. Glaisher. The season was unusually cold; and on December 18th, and afterwards, the cold became intense. On Christmas Day, the temperature of the air fell to 7°, on the 29th to 8° Fahrenheit. The extreme temperatures varied in different parts of the country; thus on Christmas Day the temperature fell in Guernsey to 30°, Helston to 32°, Truro to 26°, Ventnor to 24°, and on the south coast to 17° and 20°; these temperatures gradually decreasing in the latitude of 51½° to 6°, 7°, and 8°; and further north to zero; at Nottingham the lowest reading was noted as 8° below zero; further north than 54° of latitude the readings increased to 12° at Alnwick, and 16° at Scarborough.

The atmospheric pressure was also low, and a large amount of rain fell in December; the quantity varying in different parts. The rain-fall of the year at Greenwich was 32 in., at Truro 50·7 in., at Barnstaple

in the Year 1860. By JAMES GLAISHER, Esq., F.R.S.

50.0 in., at Lampeter 54.3 in., at Stonyhurst 50.4 in., the four highest ; at Liverpool 26.7 in., Grantham 28.1 in., Gloucester 28.1 in., Rose Hill (Oxford) 25.4 in. the London Stations, Battersea, Whitehall, and Guildhall, 27.7.

Pauperism gradually declined ; and the paupers fell from 826,655 to 793,391, and 788,838 receiving relief on an average during the last quarters of the years 1858-59-60.

State of the Public Health.—102,923 deaths were registered in the last quarter of the year 1860, and the annual rate of mortality during the season was 2.043. The mortality was 0.140 below the average.

Upon making up the account for the year the deaths are found to be 422,721 ; and the annual rate of mortality 2.124 ; or a little more than 21 in 1000. The average of the preceding 10 years is 22. So one life in every 1000 living was saved.

Yet the mortality of England and Wales is still greatly in excess of the rate experienced in the least unhealthy districts. The deaths instead of 102,923 would at that rate have been 78,833 ; so during the 92 days 24,090 persons died unnatural deaths in the least unhealthy country in Europe.

The densest districts are still the unhealthiest. In the population of town districts, exceeding nine millions at the census of 1861, the mortality was at the rate of 23 in 1000 ; in the country districts, of more than ten millions, the rate of mortality was 18 in 1000 ; so the chances of dying in the two groups of districts were as 23 to 18. There is a wide field open for sanitary improvement in the country as well as in towns, and it is gratifying to find that the progress is now evident for the mortality of the town districts has declined from 25 to 23, and of the country districts from 19 to 18.

Upon looking at the country generally we find that the epidemic diphtheria still prevails in parts of the kingdom ; measles, whooping-cough, small-pox, scarlatina, fever are also so frequently mentioned in the Registrar's notes that they may be considered prevailing epidemics.

It is the characteristic of these zymotic diseases that they do not depend upon general atmospheric conditions, but are often very fatal in one community, while they are entirely absent from another in the same climate.

In LONDON the mortality was below the average ; the deaths were 15,618.

In the SOUTH EASTERN COUNTIES, Surrey, Kent, Sussex, Hampshire, and Berkshire, the mortality was much below the average of the same season of the two preceding years ; the deaths were 81. The deaths in the Invalid Convict prison, Woking, it is said, are di-

nished by a better state of the drainage. In an isolated cottage, on an elevated common in Coulsdon parish, Croydon, four children of one family died of diphtheria within a month. Three deaths from the same disease occurred in the family of a bricklayer living in Shenfield (Wokingham, Berkshire). The registrar visited the place. "The house," he says, "is completely isolated, but is situated on a cold, clayey, undrained soil. The interior of the dwelling is in a much better condition than that of cottages generally."

In the SOUTH MIDLAND COUNTIES 6020 persons died; the mortality in nearly every county being below that of the two preceding years. The Watford district in which the mortality was high (144 deaths) was visited by whooping-cough and measles, followed by inflammation of the lungs; the King's Langley sub-district also suffered severely from the former epidemic. The sanitary state of Watford requires attention. Small-pox is still exceedingly fatal in Northamptonshire, and the neighbouring counties have not escaped. 25 deaths from small-pox were registered in St. Giles, Northampton, and 32 in Wellingborough.

In the EASTERN COUNTIES 5253 deaths were registered; less by five hundred than in the corresponding quarter of the previous year. Diphtheria destroyed four lives in a house in Chipping Ongar, two of girls of 18 and 16, two of boys of 10 and 5 years of age. The deaths in Wells, Walsingham, were raised by diphtheria, ague, and remittent fever assuming occasionally the typhoid form.

The deaths (8301) in the SOUTH-WESTERN COUNTIES were less by 1801 than the deaths in the corresponding quarter of 1858. The reduction was observed in all the counties, Wilts, Dorset, Devon, Cornwall, and Somerset. Wilton suffered severely from scarlatina; Plymouth from small-pox. The high mortality of Redruth is accounted for by scarlatina and whooping-cough. The sanitary state of Redruth is bad, otherwise 154 persons would not have died in the district in three months. Bath and Bath have been comparatively healthy.

The 12,020 deaths in the WEST MIDLAND COUNTIES show an improved state of health, for the number is less by 2527 than the deaths in the autumn quarter of 1858; and the reduction is evident in every county. Bristol, Cheltenham, and Birmingham were comparatively healthy, and were the usually insalubrious districts of South Staffordshire. Diphtheria is still ranging about the parishes of these counties; it killed children in the parish of Great Barrington, Stow-on-the-Wold, and several are still under medical treatment. Shrewsbury lost some lives; deaths were increased in Oswestry; and in Overton, Ellesmere, sixteen cases of the disease were registered. The registrar of St. Martin, Birmingham, remarks that the continuous rain has effectively cleansed the

Year 1860 for different PARALLELS of LATITUDE.

sewers, and has consequently diminished the deaths in his very flat neighbourhood. At Leamington 14 deaths from small-pox were registered. The registrar of Holy Trinity, Coventry, says, that the "births" were 180; the deaths 67. Notwithstanding the unprecedented distress "which has prevailed in Coventry, consequent upon the utter prostration of the ribbon trade, the rate of mortality has been extremely low, there being only 67 deaths against 132 deaths in the corresponding quarter of last year; 98 in 1858, and 100 in 1857."

The care of the mothers of Coventry has, it would seem, counteracted some of the effects of privation; so the neglect of their homes, by mothers at work in these manufactures, is apparently more fatal than starvation.

In the NORTH MIDLAND COUNTIES the reduction of mortality was great; the deaths from 7986 in 1858 fell to 5889. Each county and nearly every district exhibited improvement. In Nottingham the deaths fell from 732 in 1858 to 414. The mortality was exceedingly high; and it has now fallen within the usual limits. The diminished fatality is ascribed by the registrars to sanitary arrangements, and to the judicious activity of the health officers. Measles has been fatal in 34 cases at Derby; where the total deaths were 296.

The deaths in the NORTH WESTERN COUNTIES were 17,196; the deaths being nearly the same number as in the year 1859, but less by 2009 than in 1858. Those who have watched the progress of the health of Liverpool will observe with gratification that the mortality of the two districts of Liverpool and West Derby fell successively from 3912 to 3084, and to 2994 in the last quarters of the three years 1858-9-60. The increase of deaths in the Dale-street sub-district is ascribed by the Registrar to the inclemency of the weather, and to the privations and diseases that are caused by intoxicating drinks. In Manchester and Salford there is corresponding improvement. The young children which were formerly not attended by medical men in illness now obtain the advantages of medical advice, chiefly through the Registrar requiring a medical certificate of the cause of death. It is "a singular instance," Mr. Leigh says, "of a great and salutary change in the habits of a class, effected by a comparatively simple cause."

11,684 deaths were registered in YORKSHIRE. Measles has pervaded the county; and in some places as in Bradford raised the mortality considerably. In Leeds the mortality declined. The importance of skill in the conduct of the coroners inquests is illustrated by the following two cases in the Malton sub-district:—"In a house in Norton a girl, aged 7 years, was seized with sickness at dinner on Wednesday, and on the following morning she died. An inquest was held on the body, when a verdict of 'convulsions' was returned. Eight days afterwards, in the same house, a brother of the deceased, aged 6 years, died from 'choleraic diarrhœa,' after two days' illness."

* Approximated to the results of Robinson's Anemometer by reductions from Whewell.

Northallerton has been visited by typhus, scarlatina, and measles; wheat, oats, and beans are now standing in the fields covered with snow.

The deaths in the NORTHERN COUNTIES were 6295, exhibiting a slight increase. Scarlatina has ravaged some districts in unfavourable sanitary conditions. During the three months damp, fog, and excessive cold have prevailed at Newcastle. Typhoid fever has been fatal in Low Longtown, and is still prevailing there.

In WALES and MONMOUTHSHIRE the deaths, 6486 in number, are below the average. Diphtheria has been fatal in some districts, and the registrar of Llanfair notices among the unfavourable circumstances the bad harvest and the inferior quality of the bread in his district.

The severe weather occurred late in December, and its effects on the mortality will only be fully apparent in the next return.

HEALTH OF LONDON IN 1860.

GREAT cities represent the civilization of their age, and offer great facilities for the study of masses of mankind under singular circumstances. But the materials for this study have been only recently collected. Little more than the stony monuments of the cities of antiquity remain. Babylon had vast walls and palaces; Thebes had a hundred gates, out of which, Homer tells us, twenty thousand chariots issued. But what was the condition of their people? The numbers are unknown. At Rome itself, in later days, the citizen gave in his name and age, with the name and age of his wife and children, to the censors in the curule chairs; but the slaves of the city figured only among the property; so that while the census has supplied history with the numbers of Roman citizens, it has left no records of the population. The deaths of citizens were recorded; but no table of the numbers survives, except of those destroyed at intervals by plague. The marriages, the births, were not reckoned; and only exceptional social phenomena are depicted in the pages of the poets, antiquarians, and historians. So that while the arts have left monuments, literature masterpieces, and physical science treatises, no remains enable us to solve, with precision, any great social problems—to determine the condition of the people, the frequency of different orders of phenomena, the influence of soil, water, air, climate, food, institutions, on human life and on the human race.

The loss is irreparable; but the observations which are now registered in the great cities of the present day—in Berlin, Vienna, Petersburg, New York, Paris, and London—disclose the general circumstances of their populations, supply exact facts, and suggest means for improving the conditions under which the human race lives, and transmits its life to successive generations.

London is the greatest of the imperial cities ; for its population in 1861 amounted to 2,803,989, living in 362,890 houses, peopling streets and squares extended over 122 square miles, along the terraces of land rising from the banks of the Thames.

No observations exist embracing the whole of the phenomena of the life of these numbers of both sexes and of different ages extending over a century, and severally varying in strength, in morality, in intellect, in industry, in health, in occupation, in effectual production and consumption.

But we have now before us the results of observations on a certain class of phenomena. The births, the deaths, and the causes of death are recorded shortly after they occur, and an analysis of the registers has been published weekly for twenty-one years.

The results are as valuable as an experimental philosopher could have deduced from his experiments if he had had the power to expose the population to great vicissitudes of heat and cold, of dampness and dryness ; to the changes incidental to differences in the prices of food ; to air and water of different degrees of impurity ; and to destructive epidemics.

Some of these results were pointed out at the time when the facts were first observed, or in the annual reports, and others will undoubtedly be elicited by future investigations.

Thus we learn that in the same circumstances the same number of people die at the same ages of the same diseases, year after year ; organized bodies being governed by laws as fixed as those which govern the stars in their courses.

Certain changes of condition, within given limits, produce no appreciable effects ; but beyond those limits the effects are in some regulated proportion to the intensity of the causes ; varying, however, also with the state of the bodies submitted to their action, as is evident by studying the effects on the two sexes at different ages.

Thus excessive heat and cold injure health, and increase the mortality, particularly in the former case, by giving rise to diarrhoea, in the latter to diseases of the respiratory organs ; the effect generally being greatest in infancy and old age, and varying with age at rates regulated by laws.

The human body consists principally of water, in combination with some organic compounds and salts ; and this compound of oxygen and hydrogen is in constant use for drink, ablution, and daily use, so that water is the life-blood of cities. Without water they cannot exist, and on its quality their salubrity depends to an extent which the observations of twenty-one years have determined.

The supply of water in London is derived from shallow wells, from deep wells, from the New River, and from the River Thames, or its tributaries the Lea and the Ravensbourne. The well waters are foul, and nearly all of them have in solution organic matter derived from cesspools.

The Thames has during this period been the great sewer of London, and in the years of the cholera epidemic was found charged with organic matter, of unquestionable origin. The Lambeth Water Company, the Southwark, and the Chelsea, in the first epidemic (1849), supplied the South and West Districts of London with Thames water, from the part of the river extending from Hungerford to some distance above Vauxhall Bridge, and the cholera was then fatal, as the table shows, to 14,125 persons in London, and it was equally fatal in the houses of the same districts and streets that were indiscriminately supplied by the Lambeth Company, which pumped its water from the foulest part of the Thames at Hungerford, and by the Southwark and Vauxhall Company, which took its water higher up the river, but within the tidal range.

It was shown in the Cholera report (1849), that, in 10,000 inhabitants living in the districts supplied with water taken from the Thames at Kew and Hammersmith, 15 died of cholera; that 48 died of cholera in districts supplied with the waters of the Amwell, the Lea, and the Ravensbourne; and that 123 out of the same number died of cholera in the districts supplied with waters taken from the foul part of the Thames between Battersea and Waterloo Bridge. "One, three, and eight," it was added in the report, "express the relative virulence of the epidemic in the three conditions."*

The Lambeth Company, in January 1852, wisely removed its source of supply at once up to a part of the Thames above Teddington Lock; another company lingered on its old site; and the epidemic cholera of 1854, therefore, found parts of the population of London on the south side of the river in very different conditions; the one supplied with very impure water by the Southwark Company; the other supplied with water much less impure provided by the Lambeth Company. The companies had been in competition, and they often supplied the same streets and districts, so their customers were nearly in all respects in the same sanitary conditions, with one exception; a gallon of the Southwark water contained 3·5 grains, of the Lambeth water 1·4 grains of organic matter. The dejections of the cholera patients of London were in the Southwark water in small quantities, but in quantities sufficient to augment the mortality week after week in every district; and in five weeks 2,284 persons died of cholera in 40,046 houses supplied with the Southwark water, while 294 had died in 26,107 houses supplied with the water taken higher up the Thames.†

TABLE XXIV.—LONDON.—DEATHS AND METEOROLOGY, 1849–60.

Total Number of Deaths.	Mean Tem- perature of Air.	Dryness of Atmo- sphere.	Fall of Rain in Inches.	Mean Weekly Amount of Horizontal Move- ment of the Air, ap- proximated to the re- sults of Robinson's anemometer, when deductions from Whe- well's.	WEEKLY AVERAGE OF 1860.

* By Robinson's Anemometer, adopted in place of Whewell's, which was used formerly.

† Report to Registrar General on Cholera in England 1848–9, page lxi.
† Appendix to Registrar General's 17th Report, page 94.

The previous deduction was thus confirmed, and the subsequent investigation by a committee appointed by the Board of Health, to inquire into the deaths in every house supplied by the two companies, placed it beyond a doubt that the mortality of cholera in London was augmented by the impure water with which the population was supplied.

It will be remarked that the *quantity* of organic matter which was so evidently deleterious in the Southwark water amounted, according to the best existing methods of chemical analysis, to *two* grains in a gallon in excess of that in the Lambeth water; that is, 2 grains in 70,000 grains, or one part in 35,000. A person who *drank a quart* of the water would take only a grain of organic matter, and still less of the fatal ferment.

Animalcules and muscular fibre have been found in water containing minute quantities of organic matter; it is evident, therefore, that this fluid in rivers, which receive the sewage of towns, must often contain the elements of zymotic diseases, and can never be circulated through population for any length of time with entire impunity. And water companies may be assured that the purest water is the most salubrious, and that which is likely to retain the firmest hold on the market.

It is therefore of the utmost importance to keep strict watch and ward over the quality of this fluid, which is now supplied to the inhabitants of London by companies enjoying a virtual monopoly under an Act of Parliament, which bound them to alter the sources of supply, or to improve the quality of the water, after the following dates:—

Grand Junction	-	-	-	1855, August 31.
Southwark and Vauxhall	-	-	-	1855, August 31.
West Middlesex	-	-	-	1855, August 31.
Chelsea	-	-	-	1856, August 31.
East London	-	-	-	1856, August 31.
New River	-	-	-	1857, June 30.

And this is done much more effectually than it could be by any vexatious inspection of their works, through a careful periodical analysis of the

COMPARISON of the AVERAGE RESULTS obtained in the ANALYSES of the WATERS supplied by EIGHT LONDON COMPANIES in the Years 1851, 1854, 1856, and 1860.

DESCRIPTION OF WATER.	Solid Constituent Grains of Organic Matter, per Gallon.			
	1851.	1854.	1856.	1860.

	GOVERNMENT COMMISSION.	R. D. THOMSON.	HOFFMANN	R. D. THOMSON 12 analyses.

The Table may be read thus:—The Grand Junction supplied water of various qualities, containing of organic matter of various kinds, 3·07 grains in 1851, 1·92 in 1854, 1·38 in 1856, and 1·74 in 1860; the latter number being the mean result of twelve monthly analyses.

* This could not have been an ordinary sample of the water.

it is delivered, by one of the most eminent chemical analysts of

The publication of the results of the analysis in the Weekly ; perhaps of more utility than the publication of meteorological in, over which public companies have no control.

improvement in the water supply of London within the period is l decisive ; and it coincides with the reduction of the mortality.

e Census the data will exist for comparing the rates of mortality everal districts of London supplied by wells and by the several npanies, with the mortality in towns where the waters are softer r.

the twelve monthly analyses of the waters of each company by . Thomson in 1860, it will be observed that the quantities of uatter in the waters supplied by the Chelsea, Lambeth, West x, and New River Companies are nearly equal (1·67 to 1·69) ; id Junction and the Southwark waters contain a little more (1·74) ; the East London still more (1·90) : the Kent water er, the worst, and contained 1·99 grains. A marked improve- ll be observed in all since 1851, when their fatal effects in ing the mortality of cholera were first disclosed.

able (xxii) will show the rates of mortality during each of the ears 1849-60. The death-rate in 1000 living was 22·49 in 1860. ortality it will be observed was much below the average in the o ; and diarrhœa, which has destroyed every year so many lives, half so fatal as it was in 1859.

mortality has indeed fallen notably since the improvement of the pply of London.

will be borne in mind that contemporaneously with that measure, Officers and Inspectors of Nuisances were appointed in every of London, under Lord Llanover's Act. This Act has been ex- salutary. In conjunction with the Health Officer of the City of these gentlemen have suppressed a great number of evils, have the Boards of Works with valuable suggestions, and while they eady effected much good, have laid the foundation for more by uable reports.

GREAT BRITAIN.

ates of marriage, birth, and death in England have been stated, i the assistance supplied by the Reports of the Registrar-General und, the rates that prevailed in Great Britain in the same year) been ascertained.

o the number of persons married in Great Britain was 382,548 ; en born the number was 789,752 ; of persons who died 490,776. ss of births over deaths was 298,976.

arriage-rate, or persons married to a hundred living, was less in itain than it was in England, the rate in Scotland (1·386) having isiderably less than that (1·710) which prevailed south of the

XV.—ESTIMATED POPULATION, MARRIAGES, BIRTHS, and DEATHS in GREAT BRITAIN, 1860.

	Area.		Estimated Population in the middle of the Year 1860.	Marriages.	Persons Married.	Births.	Deaths.
	Acres.	Hectars.					
nd Wales -	87,394,915	15,104,312	19,902,918	170,156	340,312	694,048	422,731
- - -	20,047,462	8,112,637	3,047,731	21,118	42,236	106,704	68,058
BRITAIN -	57,372,377	23,216,939	22,950,639	191,274	382,548	789,752	490,776

a population of Scotland has been deduced on the assumption that it increased up to 1860 at the s it did in the 10 years 1851-61.

Tweed. The British rate was 1·666. But it was higher than in the previous year, in consequence of an increase in both the English and the Scottish marriage-rates.

The birth-rate of Great Britain (3·441) was slightly higher than that of England, for the Scotch rate (3·468) was higher than the English, which was 3·437. The English birth-rate of 1860 decreased on that of 1859; on the other hand the Scotch rate increased.

TABLE XXVI.—PROPORTION per Cent. of MARRIAGES, BIRTHS, and DEATHS to the Population of GREAT BRITAIN, 1860.

	Acreality.		To 100 Persons Living.			
	Acres	Hectars to a Person.	Marriages.	Persons Married.	Births.	Deaths.
England and Wales - -	1·86	·76	·635	1·710	3·437	2·194
Scotland - - - - -	6·68	2·66	·603	1·306	3·498	2·268
GREAT BRITAIN - - -	2·50	1·01	·638	1·606	3·441	2·236

The total area of a country, divided by its population, gives what is here called the "Acreality;" it is the average area to each person. The reciprocal gives the "density" of the population, or the population to each acre, square mile, or other measure.

TABLE XXVII. — NUMBER OF DEATHS in the BRITISH ARMY during 1857, 1858, 1859, and 1860 (furnished to the Registrar-General by the Adjutant-General by direction of H.R.H. the General Commanding in Chief).

TABLE XXVIII.—DEATHS OF OFFICERS AND MEN in the ARMY ABROAD, and Estimated Numbers belonging to GREAT BRITAIN and to ENGLAND and WALES, in each of the Five Years 1856, 1857, 1858, 1859, and 1860.

YEARS.	Deaths of Officers and Men in the Army Abroad.	Estimated Numbers in Col. 2 belonging to	
		Great Britain.	England and Wales.
		3	4
1856	2,380	1,408	1,223
1857	3,220	1,869	1,525
1858	7,363	4,375	3,486
1859	4,150	2,409	1,965
1860	3,293	1,812	1,559

The number of Deaths in the cols. 3 and 4 were estimated on the assumption that the soldiers abroad belonged to the different parts of the British Empire in the proportions indicated in the next Table derived from the Census Report, 1861, Occupations, Vol. I., Supplementary Tables, p. cccxlv., &c. See Table XXX.

the rate of mortality was 2·138, which is higher than it was in 1855, but less than in Scotland, where the death-rate rose to 2·233. It will be interesting and useful to compare the rates of mortality in the principal districts of England and Scotland, and to appreciate those conditions under which results of a favourable character in one country, less favourable in the other, were produced, when the more extended results of 1860 for Scotland are published.

The Report for Scotland for 1855,* which contains a great deal of valuable information, it is shown that the rate of mortality in that year was 2·06 per cent., whilst in England in the same year the rate was 2·138; and it is added, that "if this proportion be at or near the average mortality it will prove Scotland to be one of the very healthiest countries on the face of the globe, and that even England falls far behind Scotland in this respect." But it happened in the year which immediately followed, viz. 1856, that the English rate fell below the Scottish rate for 1855, for the former was then 2·05. It is not necessary, however, to travel out of the year 1855 to discover results which may be advantageously for England compared with analogous results in the Scotch tables. The rate of mortality in the Scotch towns was 2·64 per cent., whilst the rate that prevailed in English towns in the same year was 2·49. The rate in London was 2·43; and it was lower than in any of Dundee, Paisley, Glasgow, or Greenock. The strong point of the Northern kingdom seems to lie in her rural and especially her insular districts. In 1859 the death-rate of all Scotland was not so high as that of the rural districts of England.

A comparison between the two countries, and between the principal districts in each, founded on the returns of an extended series of years, will be more satisfactory.

TABLE XXIX.—ARMY SERVING AT HOME AND ABROAD.

	1851
Officers and Men born in England - - -	67,647
" " Scotland - - -	13,300
" " Ireland - - -	53,169
" " Foreign Parts - - -	6,754
Total - - - - -	142,870

Inferred also that the 76,445 officers and men abroad in the army in 1851 should be added to the population of the United Kingdom, also in the proportions indicated in the above Table. Thus the population of England and Wales at home in 1851 was 17,927,609; add the proportion of the army abroad (36,196) belonging to England and Wales, and its population becomes 17,963,805. The estimated population at home in 1860 was 19,902,918, and its population becomes 19,939,114.

The population, including its share of the army abroad, was deduced from the following proportion:—
 $17,927,609 : 17,963,805 :: 19,902,918 : x = 19,943,100$

Britain was dealt with on the same principles.

§ XXX. — ANNUAL RATE OF MORTALITY per Cent. per Annum, including the Deaths of Soldiers Abroad.

YEARS.	GREAT BRITAIN.	ENGLAND and WALES.	FRANCE.
1856	2·041	2·058	2·306
1857	2·169	2·184	2·323
1858	2·227	2·323	2·308
1859	2·213	2·244	2·670
1860	2·142	2·127	2·129

First detailed Annual Report of the Registrar General of Scotland, page xxxiii.

His Royal Highness the General Commanding in Chief has favoured me with a return of the strength of the British army *abroad*, and of the deaths in it in 1860. The mean strength was 128,391, and the deaths were 3293. While the strength abroad was greater by 4682 than in the previous year, the deaths were fewer by 857.

It has been shown that the mortality of Great Britain was 2·138. Taking the due proportions of men and deaths for the part of the army belonging to that section of the United Kingdom, the mortality of the population including the army abroad was 2·142. In 1859 it was 2·218.

In France the public health appears to have been much better than it was in the previous year, for the rate of mortality amongst the French people declined from 2·670 (in 1859) to 2·139 (in 1860). The latter rate, though rather higher than that of England, agrees almost exactly with that of Great Britain. The marriage-rate and also the birth-rate

lower than they were in England in the same year. The respective rates were 2·605, and 3·437. To a thousand of the population in the country the number of English children born exceeded that of the children by eight.

BIRTHS AND DEATHS OF BRITISH SUBJECTS AT SEA.

return with which I am favoured by the Registrar-General of the Census shows that there were 3760 deaths of merchant seamen at sea in 1860. This is a greater number than in any of the eight previous years, 1852-9, although "the strength" was less than it had been since 1850.

The rate of mortality was 2·19 per cent.; the mean of 1852-60 was 2·90.

The number of deaths of British subjects at sea in 1860 was 397, of which 241 were those of males, 156 those of females. Under this head are included deaths of seamen on ship's articles, of soldiers, marines, and invalided men from the Royal Navy, are not included.

One hundred and fifty children were returned as born at sea, viz., 136 boys and 114 girls. The number in five years (1856-60) is 1213.

The following extract from the Edinburgh Review of January 1862 (*Wrecks, Lifeboats, and Lighthouses*), accounts for the great increase in the number of deaths of passengers in 1859, which are shown in the accompanying table to have been 827; and also for the increased mortality of seamen in 1860:—

With reference to the two latest years reported upon, viz. 1859 and 1860, it is remarkable, that while 1860 was marked by an almost unprecedented succession of continuous bad weather, and therefore by a greater number of wrecks and casualties from other causes than ordinary seasons, than were recorded in any of the preceding eight years, yet the actual loss of life was considerably less; the number of lives lost in 1860 by all causes being 536, and that in 1859 as high as 1645. The great loss of life in 1859 was mainly attributable to the destruction of two or three fine passenger ships. By two wrecks alone, namely, those of the "Pomona" and the "Royal Charter," 870

XXXIV.—NUMBER OF BIRTHS AND DEATHS OF BRITISH* SUBJECTS AT SEA, exclusive of Soldiers, Marines, invalided Seamen from the Royal Navy, and Seamen on Ship's Articles, in the Years 1856 to 1860 inclusive, reported by the Captains or Commanding Officers of Vessels to the Registrar General of Seamen upon Schedule C., dated at the Termination of their respective Voyages in Ports of the United Kingdom.—(Furnished to the Registrar General by the Registrar General of Seamen.)

		MALES.	FEMALES.	TOTAL.
Deaths at Sea	1856 (imperfect) -	71	66	137
	1857 - - -	168	142	310
	1858 - - -	132	117	249
	1859 - - -	135	132	267
	1860 - - -	136	114	250
	Total - -	642	571	1213
Deaths at Sea	1856 (imperfect) -	121	78	199
	1857 - - -	238	140	378
	1858 - - -	253	182	435
	1859 - - -	524	303	827
	1860 - - -	241	156	397
		1377	859	2236

* British subjects are not particularly described upon Schedule C., but foreign names have been excluded from account.

The deaths of soldiers, marines, and invalided seamen from the Royal Navy were 23 in 1856, 29 in 1857, 1858, 156 in 1859, and 196 in 1860. The number is 640 in five years, which if added to the 1213 above, 1856, the total number of deaths of British subjects at sea in 1856-60, exclusive of those of merchant

" lives were lost, whilst in 1860 the greatest number of lives lost in any one shipwreck was 37, and the next highest number 31. It appears, from the observations accompanying the Wreck Returns for 1860, that the entire number of lives lost by shipwreck during the last eleven years was 6883. And by another return, which includes the losses by collisions and by wrecks, we find that the total number of lives lost during the last nine years (from 1852 to 1860 inclusive) was 7201, the annual average of losses being 800. It is indeed a startling truth, and one worthy of emphasis, that *seven thousand two hundred lives* have been lost by marine casualties in nine years."

PROGRESS OF REGISTRATION.

Twenty-nine millions five hundred and twelve thousand six hundred and nineteen names of persons who had been born, had married, or had died, the accumulated contributions of twenty-three years and a half (1 July 1837—31 December 1860), had obtained places on the registers at the end of the year to which this report specially refers. The numbers are :—

Persons married	-	-	-	6,759,210
Births	-	-	-	13,583,166
Deaths	-	-	-	9,170,243

TOTAL (23½ years) - - - 29,512,619

In 1860 there were 5636 searches in the Registers at the Central Office, exclusive of those in the non-parochial registers.

The "Red Book of Lynn," which belongs to the corporation of that town, and is believed by some to be the oldest English paper book in existence, contains as its first entry the transcript of a will, dated 1309. Measures have been taken to preserve it; the leaves, which had been reduced to a loose cottony substance, and had threatened to fall in pieces, have been carefully resized, and there is a prospect that it will last for years to come. This instance of longevity in a manuscript book, which

y have suffered some rough handling in the course of nearly six hundred years, deserves to be recorded, because it serves to show that by the use of a good quality of paper, and with due care bestowed on their preservation, it is possible the English registration books may be in existence and even good condition when half a dozen centuries or more have rolled over the dust of the nearly thrice ten millions of persons whose names are now written in them. In not very many generations the registers may have fulfilled in a great measure the main purposes for which, with much care and labour, they have been prepared; but in the progress of years they grow more venerable and valuable as national monuments; and though all the dead are not mighty, and but few are seen for immortal fame, it concerns the national honour that the names of that vigorous race who planted the fields of England, and built up her commerce, should be legible in the registers as long as the wasting hand of Time will permit.

The number of marriages solemnized by British consuls abroad in 1860 was 151.

Before closing this Report, I may be permitted to advert to a circumstance which has sometimes been made the subject of observation, namely, the interval of time, which to some persons may appear to be longer than necessary, between the close of the year to which the subjoined Tables relate and the date at which they are ready for publication. In the present instance the preparation of them, and work which must be done antecedently to that preparation, have occupied a period of fifteen months. It has been asked: Why this delay? The question may be put by some whose haste to gain knowledge is not immoderate, but who have not become acquainted practically with the immense labour involved in the construction of statistical tables, and in the calculations based on them.

It is put by others whose great desire will not be satisfied till the statistics of the British empire for this current year are laid with the morning journal on their breakfast tables on New Year's day 1863, and who even then, because they live in an age of mechanical invention, for which by the process of thought they take credit to themselves, will not consider

NOTE.—The numbers registered in 1837 are for the Half Year ending December 31st.

it their duty to be surprised at so remarkable a result. In answer to the question I have to state :—

1. That this office was established by Act of Parliament, primarily for the purpose of collecting, arranging, paging, examining, correcting, binding, and indexing the certified copies of the English registers, and of supplying stamped certificates of births, deaths, and marriages to all persons who may apply for them ; that the certified copies are received quarterly, but the returns are not completed till nearly three months after the end of each quarter ; and that the preparatory duties which I have mentioned, and which occupy a majority of the gentlemen engaged in the office during a period of eight months after the quarterly arrivals have begun, must be performed in respect to each volume before it can pass into the hands of the statistical clerks. As the work in the Record Department advances, each quarterly volume is released for the preparation of the statistical abstracts ; but it will be seen that the entire number of volumes of any Registration year are not available for this purpose till the September following the termination of the year.

2. That in conformity with a provision of the Registration Act, a general abstract is prepared, in each year, of the number of births, deaths, and marriages registered during the foregoing year, in order that it may be laid before Parliament ; but the detailed abstracts that constitute my "Annual Reports" are works of much labour and skill, and necessarily occupy considerable time in the preparation of them. These reports are not designed merely to answer a temporary purpose. They may be regarded as storehouses of facts which have been arranged on methods that are approved as the most useful and convenient, and to which, both now and in future years, students of vital statistics may resort for the elucidation of questions bearing on the social condition of the people, on national progress, on life, health, and disease. It is important that they should be *done well*. It is desirable only in the next degree that they should be *done quickly*.

It will be urged that the machinery of Registration should be employed to give immediate warning of epidemic diseases, to trace in contemporaneous reports their beginning, progress, and decline, and to assist in investigating general and local conditions in which they are developed. When the plague is at the door, the people will not wait till its history can be written in a blue book. This is quite true, and it will be sufficient to state in reference to it, that I publish a weekly report for London on the Tuesday following the termination of each week, and a quarterly report for England and Wales within a month after the close of each quarter.

For an account of the Causes of Death in 1860, I beg to refer you to a letter addressed to me by Dr. Farr, which will be found in the Appendix.

I have the honour to be,

Sir,

Your faithful servant,

GEORGE GRAHAM,

Registrar-General.

* The Registration Counties consist of groups of entire Registration Districts; which Districts are, in general, identical with Poor Law Unions. As the principle adopted has been to a District or Union which extends into more than one County with the County in which either the principal or greater part of the population is situated, the Registration Counties differ more or less from the Counties proper.

* The Registration Counties consist of groups of entire Registration Districts; which Districts are, in general, identical with the Unions. As the principle adopted has been to place a District or Union which extends into more than one County with that of the principal town or the greater part of the population is located, the limits of the Registration Counties differ somewhat from those of the Counties proper.

† Some of the births—especially of illegitimate children in London and large towns—escape reg.

MARRIAGES, BIRTHS, and DEATHS registered in the Year 1860—continued.

* The Districts are collections of contiguous Parishes or Places combined for purposes connected with the Registration of Births, Deaths, and Marriages; and are generally identical with the Poor Law Unions of the same names. The Districts, **ON** is arranged according to their local position under the Registration Counties.

† For a table of the Deaths in the principal Public Institutions situated in the Districts of London see pages 65-4.

Note.—Wherever the minus sign is prefixed to the number in the column headed "Excess of Births over Deaths," it shows the Births in the District, instead of exceeding the Deaths, were, in fact, less than the Deaths in the same District.

EASTERN COUNTIES.—MARRIAGES, BIRTHS, AND DEATHS, 1860.—DISTRICTS—continued.

Sub-districts are sub-divisions of the Districts, and comprise the Parishes or Places in which the Births and Deaths are registered severally appointed for that purpose.

W denotes that the Sub-district contains within its limits a Workhouse belonging to the District or Union; W indicates those belonging to another District or Union is included.

The minus sign (-) is prefixed to the numbers given in the Column headed "Excess of Births over Deaths," it denotes that in the Sub-district, instead of exceeding the Deaths, were, in fact, less than the Deaths to the extent stated. The number of Deaths over Births in several of the Sub-districts of London is attributable to the mortality in Hospitals, and other principal Public Institutions in London, see pp. 83-4.

ENGLAND.—SUPPLEMENTARY TABLE of

[The principles upon which the Causes of Death are tabled have been explained in previous Annual Reports. It will be sufficient to state now that all the Diseases, either having a distinct character, or fatal to any considerable number of persons, are classified under 112 heads some of which, however, include groups of very distinct diseases,—such as are fatal to only few persons, or diseases which are often confounded with other diseases. The rule has been to refer the distinct diseases to heads under which the cases were so numerous, that the addition of numbers would not interfere with the calculated proportions. Thus, *mumps* was the cause of 88 deaths (Males and Females) in the year 1860, and *scarlatina* of 9681. The mortality

ES of DEATH at different Periods of Life, in the Year 1860.

ina, deduced by dividing the deaths from that disease, *plus* 88, by the total population of and, will be found to differ little from the mortality from scarlatina alone. Where it is d, partial correction, however, can now be made by means of the following Supplementary s, containing many of the deaths from distinct diseases, such as mumps, epistaxis, dry gangrene, polypus, rickets, bronchocele, &c. &c., and deaths from other forms of e, such as softening of the brain (necrencephalus), which are returned in many cases other heads, as paralysis, &c.

ese Tables are an extension of the Tables of Causes of Death in England, pp. 120-125.]

* The population, according to the Censuses of 1851 and 1861, is stated for the various subdivisions as they were situated. Whenever the minus sign (-) is prefixed to the numbers in the columns "Excess of Births over Deaths," and the plus sign (+) is prefixed to the numbers in the columns "Excess of Deaths over Births," it signifies that the number of births was less than the number of deaths, or of the Census numbers in 1851 and 1861, as the case may be.

Births in the Ten Years, 1851-60.

NOTE.—Changes were made in the constitution of several of the Districts between 1851 and 1860; the numbers and dates of Districts to another during the interval, the Births and Deaths are returned, for the sake of comparison, as if stated for the Districts and Sub-districts as they were severally constituted at the end of 1850, when their limits were ascertained.

* Changes have been made in the Districts.

H. The principal Metropolitan Hospitals are situated in these Districts.

f the TEN YEARS 1851-60—in DISTRICTS.

BIRTHS.																			Excess of Births over Deaths.	Increase or Decrease of Population according to Census Returns.	DISTRICTS.

NOTE.—Changes were made in the constitution of several of the Districts between 1851 and 1860, the nature and date of the District to another during the interval, the Births and Deaths are returned, for the sake of comparison, as if such had been the case for the Districts and Sub-districts as they were severally constituted at the end of 1860, when their limits were the same.

* Changes have been made in the

H. The principal Metropolitan Hospitals are situated in these Districts:—W. Westminster

each of the TEN YEARS 1851-60—in DISTRICTS.

NOTE.—The letter *W* denotes that the Sub-district contains within its limits a Workhouse belonging to the District and indicates that a Workhouse belonging to another District or Union is included. The principal Hospitals of London are in the Sub-districts distinguished by the letter *H*. Wherever the minus sign (-) is prefixed to the numbers given in the

(a) Clifford's Inn (pop. 28 in 1851 and 48 in 1861), and Serjeants' Inn, Chancery Lane (pop. 5 in 1851 and 5 in 1861), were transferred from the St. Clement Danes sub-district of the Strand to the South sub-district of the West London district (13) during the year 1852.

red in the 10 Years, 1851-60—in SUB-DISTRICTS.

"Excess of Births over Deaths," it denotes that the Births in the Sub-district, instead of exceeding the Deaths were, in some cases, less than the Deaths to the extent stated. The Excess of Deaths over Births in several of the Sub-districts of London is due to the mortality in Hospitals.

(a) See note (a) page 300.

(b) The parish of Bradworthy (pop. 1071 in 1851 and 961 in 1861) was transferred from the Devonshire to the Cornwall District by the Local Government Act of 1861.

(c) A change was made in the constitution of the Holsworthy and Launceston Districts by the Local Government Act of 1861 from the Broadwoodwiger to the Black Torrington parish.

(d) The parish of Calstock (pop. 4392 in 1851 and 7000 in 1861) was transferred from the Cornwall to the Devonshire District by the Local Government Act of 1861.

in each of the TEN YEARS 1851-60—in SUB-DISTRICTS—continued.

LETTER to the REGISTRAR GENERAL on the CAUSES of DEATH in
ENGLAND, by WILLIAM FARR, Esq., M.D., F.R.S., D.C.L.

YEAR 1860.

SIR,

I SUBMIT to you the results of the inquiry into the diseases of the persons who died in England and Wales during the year 1860.

Several of the deaths were investigated by the coroners, a large number was returned by the qualified medical men of the country, others are given on the authority of persons in attendance or present at the death ; and of 5767 no account is rendered. The latter numbers are distributed proportionally over the numbers of causes returned in the subsequent calculations.

This great inquest embraces 422,721 deaths.

I. ZYMOTIC DISEASES.

75,849 persons died of the class of epidemic, endemic, or contagious diseases ; including all the maladies which, under unfavourable conditions, prevail periodically as pestilences, and were believed by the ancients to be manifestations of divine wrath.

These diseases are indeed often direct results of violations of natural laws by the communities which they infest ; and, as they are to a considerable extent under control, always demand attention.

The reduced rate of mortality, which is noticed in your Report, is chiefly referable to the decline in the number of deaths from scarlatina,

TABLE (1).—DEATHS in ENGLAND AND WALES from SCARLATINA, CYNANCHE MALIGNA, and DIPHTHERIA, for each of the Years 1855 to 1860.

diphtheria, and diarrhœa. A decrease in the deaths from small-pox, typhus, erysipelas, and cholera also contributed to the favourable result. Thus in the two consecutive years 1859 and 1860 the deaths by scarlatina were 19,907 and 9681; by diphtheria 9587 and 5212; by diarrhœa 18,331 and 9702. The decrease on these three diseases was 23,230 deaths.

In the year 1858 scarlatina destroyed 30,317 lives; in 1860, as given above, 9681. Fever prevails always epidemically in England, and is the most fatal to men and women in the prime of life. 19,016 lives were cut off by fever in 1857, since when it has slowly declined; the deaths in 1860 being still 13,012.

The ravages of these diseases will be diminished by the progress of public cleanliness, and notably by burying all excreta as manure in the earth; for zymotic disease is propagated by the diffusion through air and water of its infectious principles.

Ague and rheumatism are not now frequently fatal in this country, but they occasion an incalculable amount of suffering, disability, and

condary disease, which will disappear when the soil of England is effectually drained.

Of the enthetic diseases, syphilis is the most fatal, and the deaths ascribed to it rose from 554 in 1850 to 1067 in 1860. This is naturally one of the maladies of which it is difficult to get complete information;

Order 2, comprising Violent Deaths in Battle, is omitted, as inapplicable to the civil population.

The number of persons executed in the several years will not necessarily correspond with those in the same years of "Criminal Returns," inasmuch as the executions recorded in each year in the latter are derived from the dates revision, while the numbers in this Table are classed under the years in which the deaths are registered.

The cases of angina membranacea which would now be put to diphtheria were formerly classed under the same head as tetanus, but were distinguished in the notes.

and it is not improbable that the increase, rather apparent than real, is accounted for by improvements in the medical returns.

68 deaths are ascribed to privation, 1002 to the want of breast-milk, 361 to purpura and scurvy, 457 to delirium tremens (generally the effects of drunkenness), and 318 to direct intemperance. The indirect deaths from the want of proper food and from the excesses in drinking, greatly exceeding these numbers, are returned under the diseases to which they give rise.

Worms and other parasitic diseases, so rare now, and so common in the middle ages, were the causes of 167 deaths.

TABLE (5).—CAUSES OF DEATH registered in ENGLAND in each of the Ten Years 1851—1860—continued.

Class.	CAUSES OF DEATH.	1851	1852	1853	1854	1855	1856	1857	1858	1859	1860

II. CONSTITUTIONAL DISEASES.

These diseases affect the tissues of the body generally. 82,088 deaths were occasioned by them, including the diathetic order, taking cancer as its type, and the tubercular order, of which phthisis is the representative. The annual rate of mortality was 4·182 in 1000; of which ·836 was the

* Order 2, comprising Violent Deaths in Battle, is omitted, as impossible to classify.

Phtthisis, the most fatal of all the diseases which afflict humanity, destroyed 51,024 lives; 2,599 in 1000 living, and more than 12 per cent. of the deaths. 520 of these deaths were by hæmoptysis (335 males, 185 females), and 15 by pneumo-thorax, that is by perforation of the membrane covering the lungs. The deaths by this complication of phtthisis in the six years were 30, 22, 17, 23, 19, and 15; the fluctuation was thus within narrow limits.

III. LOCAL DISEASES.

We come now to inflammation and its consequences, as well as other affections of particular organs. The class includes 171,037 deaths; or 41 per cent. of the total number.

The deaths by apoplexy and paralysis increased in the year; so did deaths by diseases of the heart. Bronchitis prevailed and was fatal to the

TABLE (7).—ENGLAND. CAUSES OF DEATH in the Year 1860, arranged in the order of Mortality.

unusual number of 32,347, pneumonia to 25,264 persons. Thus, 68,408 persons died by diseases of the respiratory organs, or 8555 in excess of the deaths by that order of diseases in the previous year. Joint diseases were fatal to more than the average number of people.

IV. DEVELOPMENTAL DISEASES.

70,311 deaths were referred to the four orders of this class; and 28,443 were specifically said to be by old age. That is, less than 7 per cent. of the total deaths were so classed.

The deaths by child-birth were 3173, including 987 by metria (child-birth fever); so, as will be seen by the annexed Table, 46 mothers died to 10,000 children born.

V. VIOLENT DEATHS.

The violent deaths amounted to 14,775; so 7.53 in 10,000 of the people die by violence, or 1 in 1328 living thus terminates his existence; and 35 deaths in 1000, or 1 in 28 is a violent death. 10 were executions, 377 were returned as homicides by coroners juries, 1365 were suicides, and 12,991 were deaths by accident or negligence; 32 violent deaths were not classified. Of the accidental deaths 5417 were deaths by fractures and contusions; and the deaths (3166) by fire exceeded the deaths by water returned (2264); but if we add a due proportion of British subjects drowned abroad, and not registered, the deaths by water will probably exceed those by fire.

The murders and manslaughters are still imperfectly returned. Suicide is most frequently committed by hanging; but many of the suicides by drowning are undoubtedly classed under accidental death, from the want of information. The suicides ascertained are 7 in 100,000 of the population; 1 in 14,286.

MALES AND FEMALES.

The difference in the liability of the two sexes to diseases is due in some cases to structure, in others to occupation, in others to dress, in others to passion, and in others to causes which are at present inappreciable.

The zymotic deaths are in the aggregate nearly equal in males and females; diphtheria, whooping-cough, and metria destroying most females; small-pox, croup, carbuncle, diarrhœa, ague, and rheumatism most males. Metria is the consequence of child-bearing; and males are probably

TABLE (6).—DEATHS OF WOMEN IN CHILDBIRTH in the Fourteen Years 1847-60.

more exposed than females to the poisons of ague and rheumatism, but it is difficult to assign any reason for the fact that while 3769 boys under 5 years of age died of whooping-cough, 4436 girls died of the same disease at the same ages.

Syphilis is equally fatal to males (543) and to females (524). If we take adults of 15 and upwards, 154 deaths of females are from this cause, and 87 deaths of males; but the 178 deaths of males—there having been no deaths of females from stricture of the urethra, a common consequence of gonorrhœa—more than redress the inequality.

The 3 deaths of males from hydrophobia, and 4 from glanders, may be traced to the greater exposure of males to their causes.

Of gout 212 men and 56 women die. Gout is not always the consequence of over-feeding; but the excesses in eating and drinking of men at public dinners, and elsewhere, sufficiently account for this excess of mortality by gout, representing a still greater excess of sufferings from the same malady. Delirium tremens killed 407 men, 50 women; intemperance 212 men and 106 women; and this is quite in conformity with what is shown above on the comparative temperance of English women.

Women have a greater disposition to dropsy than men; and while 2100 men died of cancer, 4727 women died of this disease. The frequent seat of the disease in the uterus and in the breasts explains the difference.

Women are also more subject to consumption than men. Table (9) shows the deaths at several ages.

The excess of the deaths of young girls of the age 15–20 is 1142 annually. These sad deaths may be partly the result of organization; but many of them are also partly referable to tight-lacing, to thin shoes, to close rooms, and to the want of exercise in the open air. Young women of 20–40 are also exposed to the same causes, and to others incidental to their condition.

Scrofula, tabes mesenterica, hydrocephalus, cephalitis, convulsions, and epilepsy, or the acute diseases of the brain generally, are the most fatal to males; but chorea (St. Vitus's dance) killed 26 males, 40 females.

Aneurism was fatal to 265 males, 103 females. The large arteries, weakened by deposits, are sometimes ruptured by violent exertions, which men make more frequently than women. Asthma, emphysema, strictly from enlarged or ruptured air-cells, is also more fatal to males than to females. The greater frequency of pneumonia and bronchitis in male than in female children under five years of age is one of the causes of the excess in the mortality of boys; but it cannot at present be explained by differences of structure; neither can the excess in the deaths of males by pneumonia at more advanced ages. The men are, however, more exposed than women to cold weather.

The diseases of the digestive organs, and notably peritonitis and ascites, are the most fatal to women. The peritonitis of the registers is probably in many cases the result of child-bearing, under which it should properly be returned.

TABLE (9).—DEATHS FROM PHTHISIS, in the Year 1860, of MALES and FEMALES of the Ages 15–55.

	AGES.				
	15—	20—	25—	35—	45—55
Men - -	2158	3380	5555	4498	3113
Women - -	3300	4057	7065	4824	2687
Excess of Women	1142	677	1510	326	—426

The diseases of the kidneys and bladder, including stone, are more than twice as fatal to males as to females. This is partly due to the differences of the urethra in the sexes; but the excess of the deaths of men by diabetes shows that this explanation alone is insufficient. 154 males and 25 females died of the painful stone in the bladder; 346 men and 190 women of diabetes.

The diseases of the organs of generation were fatal to 40 men and to 1078 women; including in the latter case 244 deaths by ovarian dropsy.

It is not stated in all cases of this kind, nor in cases of stone, how frequently operations have been performed.

Phlegmon is most common in males, ulcer in females.

4328 boys and 3314 girls, born prematurely, died. More boys than girls die of malformations; the evolution of the male is more elaborate and is more frequently left incomplete in the male than in the female. Spina bifida from the unclosed fissure in the back of the spine is most frequent in females, and may be explained probably by the transcendental anatomist.

The failure in the development of strength and nutritive power is more frequent in males—of whom the deaths of 14,170 were ascribed to atrophy and debility—than in females (12,756).

Parmenia, and the diseases incidental to child-bearing, are of course only fatal to women.

10,667 males and 4109 females died violent deaths. Men are exposed to greater dangers in their daily life than women, and probably more than half the violent deaths of both sexes may be prevented by care and vigilance on their own part, and on the part of their employers.

Of the deaths by accidental fractures and contusions, 4552 males and 865 females died; of those by accidental drownings, 1908 males and 356 females died.

Burns and scalds are more fatal to females than to males in the aggregate; but in the first years of infancy, when the dresses of both sexes are equally combustible, the boys are more frequently burnt and scalded than the girls, who are cautious. From the age of 5 to 10 twice as many girls as boys are burnt; from 10 to 15 the number and the difference diminish; at 15 and up to 45 the exposure of men to fire in coal-mines and works destroys so many of their lives that the deaths outnumber those by crinoline and other combustible articles of dress; after the age of 55 the old women who are now burnt to death far exceeds the number of those of which we read in the cruel times when they were burnt as witches. By lightning and poison more men than women are killed. While 375 unhappy women committed suicide, 990 men committed the same rash act, by gun-shot and other wounds, by poison, drowning, hanging, and other means.

Twelve persons were killed by lightning in the year; and nine were males, three were females. Their employments were out of doors. The deaths by lightning in the four years ending in 1860 were 18, 26, 17, 12; and the numbers represent the periodical disturbances of the electric

TABLE (10).—DEATHS FROM BURNS AND SCALDS in the Year 1860.

Age.	Under 1	1—	2—	3—	4—	5—	10—	15—	20—	25—	35—	45—	55—	65—	75—	85—	95	All ages.

tension of the atmosphere. Of 73 deaths by lightning, one only was a young child; 18 were 25-35, 10 were 35-45, 10 were 45-55, 8 were 55-65, and 4 were 65 years of age and upwards.

I have the honour to be,

Sir,

Your most obedient Servant,

WILLIAM FARR.

To
The Registrar-General.

TOTAL					1	3	5	8	6	18	10	10	8	4		

Following Index furnishes a reference to the *Number* of each DISTRICT in the alphabetical arrangement adopted in the Tables of Abstracts contained in the Report, numbers running consecutively from 1 to 623.* In forming the alphabetical arrangement the principle is adopted of placing compound names in the order in which they are pronounced: thus, East Ashford will be found under the letter E, and not under A, as Ashford, East.]
